Ford Tough-Patrick R. Foster 2017-06-01 Get Fords complete story in Ford Tough: 100 Years of Ford Trucks and see why they've dominated the truck market, selling 1.5 million trucks every year in the US alone. In July 1917 Ford Motor Company introduced a one-ton chassis for commercial trucks, marking what many historians feel was its official entry into the dedicated truck business. Sure, after-market pickup beds could be added to a Model T car to convert it to a pickup, but with the debut of the rugged Model TT truck chassis, Ford was firmly in the truck market. Eight years later, Ford introduced its first factory-produced pickup, a sturdy half-ton job the public loved. During the century that has passed since that first Ford truck chassis, the F-series has become the best-selling truck in the world, and the best-selling vehicle of any type in America. Ford Tough: 100 Years of Ford Trucks tells the entire Ford truck story from the very beginning, when Ford got its start in truck production. This book provides the history of the wide array of models Ford has built over the past century, including the Model A roadster pick-up, stylish 81C pickups, legendary 1948 F-1, Bronco, Courier, Ranchero, and Econoline.

River Rouge-Joseph Cabadas 2004 In 1914, Henry Ford ordered the construction of a small plant at the confluence of the River Rouge and Detroit River in what was then the rural community of Dearborn, just outside of Detroit. Eventually, that small pilot plant grew into the gigantic 1,100-acre River Rouge Complex, the most famous auto factory of the twentieth century, renowned as the home of Ford's "vertical integration." In 1999, Ford's great-grandson and Ford Chairman Bill Ford III announced that the company would reinvent the complex as the auto factory of the new century, scheduled for completion in 2004. Like "the Rouge" itself, this illustrated 90-year chronological history of the complex will provide a sprawling view of the evolution of automaking and industrial technologies, as well as the exciting new concepts the company is incorporating into the current redesign. Central to vertical integration was self-sufficiency: raw materials went in one end and finished cars came out the other. In fact, iron ore and coal became completed engine blocks in less than 24 hours! Filled with evocative inside-the-factory shots, this illustrated 90-year history provides sprawling views of manufacturing processes, factory evolution, and the exciting new concepts Ford has incorporated into the redesign. Author Joe Cabadas also explores "vertical integration" as conceived at the Rouge-raw materials essentially entered one door and new automobiles exited the other. In fact, iron ore and coal were transformed into engine blocks in less than 24 hours. In addition to manufacturing processes that also included glassmaking and woodworking, the engaging chronological history explores the Rouge's roles as a crucible of industry unionization (at its peak in 1929, the 1,100-acre factory employed 128,000 workers) and wartime production, and its profound influence on Japanese automakers. Thanks to the Rouge's immensity and diverse operations, archival and current images provide a visual cornucopia for just about any reader.- The River Rouge automotive factory is part of Henry Ford's grand legacy that remains today. It is one of the world's largest automotive manufacturing facilities.- Timed to coincide with the completed Rouge renovation and the complex's ninetieth anniversaryAbout the AuthorJoe Cabadas is an automotive journalist whose

work regularly appears in several industry trade publications. He is the co-author of MBI Publishing Company's bestselling *The American Auto Factory* (ISBN 0-7603-1059-9) and lives in Dearborn, Michigan.
