Victims-Jonathan Kellerman 2012-02-28 “With his latest, [Jonathan Kellerman] not only brings his ‘A’ game but also ratchets it up a notch or three. . . . Victims will keep you up at night.”—Bookreporter Acid-tongued Vita Berlin hadn’t a friend in the world, but whom did she cross so badly as to end up meticulously arranged in such a gruesome murder scene? One look prompts LAPD detective Milo Sturgis to summon his expert in homicidal maniacs, Alex Delaware. But even Alex is stymied when more slayings occur in the same gashly fashion—with no apparent connection among the victims. And the only clue left behind—a blank page bearing a question mark—seems to be both a menacing taunt and a chilling cry for help from a tortured, savage soul. To end the bloody spree and prevent citywide panic, Alex navigates the secretive world of mental health treatment, from the sleek office of a Beverly Hills therapist to a shuttered mental institution where he once learned his craft. As each jagged piece of the puzzle fits into place, a portrait emerges of a sinister mind at its most unimaginable—and an evil soul at its most unspeakable. With both explanation and demonstration, Davey guides you step-by-step through the entire process of generating and validating an idea, setting entry and exit points, testing systems, and implementing them in live trading. You’ll find concrete rules for increasing or decreasing allocation to a system, and rules for when to abandon one. The companion website includes Davey’s own Monte Carlo simulator and other tools that will enable you to automate and test your own trading ideas. A purely discretionary approach to trading generally breaks down over the long haul. With market data and statistics easily available, traders are increasingly opting to employ an automated or algorithmic trading system—enough that algorithmic trades now account for the bulk of stock trading volume. Building Algorithmic Trading Systems teaches you how to develop your own systems with an eye toward market fluctuations and the permanence of even the most effective algorithm. Learn the systems that generated triple-digit returns in the World Cup Trading Championship Develop an algorithmic approach for any trading idea using off-the-shelf software or popular platforms Test your new system using historical and current market data Mine market data for statistical tendencies that may form the basis of a new system Market patterns change, and so do system results. Past performance isn’t a guarantee of future success, so the key is to continually develop new systems and adjust established systems in response to evolving statistical tendencies. For individual traders looking for the next leap forward, Building Algorithmic Trading Systems provides expert guidance and practical advice.

Natural Language Processing for Social Media-Atefeh Farzindar 2017-12-15 In recent years, online social networking has revolutionized interpersonal communication. The newer research on language analysis in social media has been increasingly focusing on the latter’s impact on our daily lives, both on a personal and a professional level. Natural language processing (NLP) is one of the most promising avenues for social media data processing. It is a scientific challenge to develop powerful methods and algorithms which extract relevant information from a large volume of data coming from multiple sources and languages in various formats or in free form. We discuss the challenges in analyzing social media texts in contrast with traditional documents. Research methods in information extraction, automatic categorization and clustering, and statistical machine translation need to be adapted to a new kind of data. This book reviews the current research on NLP tools and methods for processing the non-traditional information from social media data that is available in large amounts (big data), and shows how innovative NLP approaches can integrate appropriate linguistic information in various fields such as social media monitoring, healthcare, business intelligence, industry, marketing, and security and defence. We review the existing evaluation metrics for NLP and social media applications, and the new efforts in evaluation campaigns or shared tasks on new datasets collected from social media. Such tasks are organized by the Association for Computational Linguistics (such as SemEval tasks) or by the National Institute of Standards and Technology via the Text REtrieval Conference (TREC) and the Text Analysis Conference (TAC). In the concluding chapter, we discuss the importance of this dynamic discipline and its great potential for NLP in the coming decade, in the context of changes in mobile technology, cloud computing, virtual reality, and social networking. In this second edition, we have added information about recent progress in the tasks and applications presented in the first edition. We discuss new methods and their results. The number of research projects and publications that use social media data is constantly increasing due to continuously growing amounts of social media data and the need to automatically process them. We have added 85 new references to the more than 300 references from the first edition. Besides updating each section, we have added a new application (digital marketing) to the section on media monitoring and we have augmented the section on healthcare applications with an extended discussion of recent research on detecting signs of mental illness from social media.

Judicial Responses to Pre-Trial Procedural Violations in International Criminal Proceedings-Kelly Pitcher 2017-12-14 This book provides an in-depth examination of the judicial response at the internationalcriminal tribunals (ICTs) to the violation of procedural standards in thepre-trial phase of proceedings. It does so against the backdrop of the assumption thatsertain particularities of international criminal proceedings may warrant a differentapproach to the matter than at the national level. By reference to relevant human rights standards and to national criminal procedure, as well as to theoretical accounts of the judicial response to pre-trial procedural violations, this book assesses the ICTs’ law and practice in this regard, thereby identifyingpoints of concern and making suggestions for improvement. In doing so, it considersthe most suitable rationale for responding to procedural violations committed in thepre-trial phase of international criminal proceedings and the merits of judicial discretion in this context, as well as the impact of certain particularities of such proceedings on the determination of how to address procedural violations. The book is intended for academics and practitioners in the field of (international)criminal law who want to gain a deeper understanding of the possible impact ofpre-trial procedural violations on criminal proceedings. Kelly Pitcher is Assistant Professor of Criminal Law and Criminal Procedure at LeidenUniversity in The Netherlands.

The Art of Judicial Reasoning-Gunnar Selvik 2019-02-28 This book, formed as a series of essays in honour of Professor Carl Baudenbacher, addresses the very art of judicial reasoning, and features contributions from many of the foremost current or former national, supranational, or international judges. This unique volume is intended first and foremost for legal scholars, but its approachable style makes it readily accessible for students and for those with a general interest in the application of the law and justice in today’s multi-layered world. The collection of essays is rather more philosophical and reflective as opposed to doctrinal. Each contribution focuses on the nature and operation of justice, the independence of the judiciary, and on judicial style primarily from the perspective of the judges themselves. The book provides perspectives on what it means to be accountable and independent as a judge, the role of language and languages in the quest for justice, while other contributions acquaint readers with the some of the structures of courts themselves, or indeed question for whom judgments are written. Each chapter has been written by a presiding judge, or head of an institution and the book is divided into three parts: - Part I Art and Method - Part II Justice and the Judiciary - Part III Reasoning and Language(s)

What Thalia wants from Alex are answers to unsettling questions—about guilt, patterns of criminal behavior, victim selection. Crime Scene-Jonathan Kellerman 2017-08-01 NEW YORK TIMES BESTSELLER • A former star athlete turned deputy coroner is drawn into a brutal, complicated murder in this psychological thriller from a father-son writing team that delivers “brilliant, page-turning fiction” (Stephen King). Natural causes or foul play? That’s the question Jay Edison must answer each time he examines a body. Figuring out motives and chasing down suspects aren’t part of his beat—not until a seemingly open-and-shut case proves to be more than meets his highly trained eye. Eccentric, reclusive Walter Rennett lies cold at the bottom of his stairs. At first glance the scene looks straightforward: a once-respected psychology professor, done in by booze and a bad heart. But his daughter Tatiana insists that her father has been murdered, and she persuades Clay to take a closer look at the grim facts of Rennett’s life. What emerges is a history of scandal and violence, and an experiment gone horribly wrong that ended in the brutal murder of a coed. Walter Rennett, it appears, was a broken man—and maybe a marked one. And when Clay learns that a colleague of Rennett’s died in a nearby identical manner, he begins to question everything in the official record. All the while, his relationship with Tatiana is evolving into something forbidden. The closer they grow, the more determined he becomes to catch her father’s killer—even if he has to overstep his bounds to do it. The twisting trail Clay follows will lead him into the darkest corners of the human soul. It’s his job to listen to the tales the dead tell. But this time, he’s part of a story that makes his blood run cold. Praise for Crime Scene “You could drive yourself crazy trying to figure out who wrote what. . . . But whoever came up with the fine line, ‘When I meet new people, they’re usually dead,’ should pat himself on the back.”—*The New York Times* Book Review “A terrific book. . . . Put Crime Scene at the top of your reading pile.”—*Bookreporter* “A character-driven, intricately plotted whodunit. . . . Mystery readers will devour the book and look forward to the next father and son collaboration.”—*Press Republican*

Biosynthesis-Finian J. Leeper 2003-07-01 This book is the second of two volumes that deal with discovery of chemical pathways of biosynthesis of natural products (secondary metabolites). The first volume covered the use of isotopes in biosynthetic research and the formation of enzyme cofactors and reduced polyketides. This second volume describes biosynthesis of aromatic (unreduced) polyketides, enzymes responsible for cyclization of terpenoids (isoprenoids), and biochemical generation of selected classes of alkaloids (prenylated tryptophan, tropane, pyrrolizidine). Knowledge of the pathways and the techniques to elucidate them opens the door to combinatorial biosynthesis as well as to the production of targeted pharmaceutical agents utilizing a combination of chemistry, molecular biology and protein biochemistry.

An Archaeology of Social Space-James A. Delle 2013-06-29 James Delle has evolved a number of problems in Caribbean archaeology with An Archaeology of Social Space. He deals with most of the problems by using historical archaeology, and clearly implicates Ameri canist prehistorians. Although this book is about coffee plantations in the Blue Mountains area of Jamaica, it is actually about the whole Caribbean. Just as it is about all archaeology, not only historical archaeology, it is also a book about colonialism and national identity and how these two enormous events happened in the context of eighteenth and nineteenth century capitalism. The first issue raises appears to be an academic topic that has come to be known as landscape archaeology. Landscape archaeology considers the planned spaces around living places. The topic is big, comprehensive, and new within historical archaeology. Its fundamen tal insight is that in the early modern and modern worlds everything within view could be made into money. Seeing occurs in space and from 1450, or a little before, everything that could be seen could, potentially, be measured. The measuring-and the accompanying culture of record ing called a scriptural economy-became a way of controlling people in space, for a profit. Dr. Delle thus explores maps, local philosophies of settlement, town dwelling, housing, and the actual condition of plantations and their buildings now, so as to describe coffee-Jamaica from 1790-1860.

Atoms in Molecules-Richard F. W. Bader 1994 The molecular structure hypothesis - that a molecule is a collection of atoms linked by a network of bonds - was forged in the crucible of nineteenth century experimental chemistry and has continued to serve as the principal means of ordering and classifying the observations of chemistry. There is a difficulty with the hypothesis, however, in that it is not related directly to the physics which governs the motions of the nuclei and electrons that make up the atoms and the bonds. It is the purpose of this important book - now available in paperback for the first time - to show that a theory can be developed to underpin the molecular structure hypothesis - that the atoms in a molecule are real, with properties predicted and defined by the laws of quantum mechanics can be incorporated into the resulting theory - a theory of atoms in molecules. The book is aimed at those scientists responsible for performing the experiments and collecting the observations on the properties ofmatter at the atomic level, in the belief that the transformation of qualitative concepts into a qualitative theory will serve to deepen our understanding of chemistry.
