Commercial Banking Risk Management-Weidong Tian 2016-12-08 This edited collection comprehensively addresses the widespread regulatory challenges uncovered and changes introduced in financial markets following the 2007-2008 crisis, suggesting strategies by which financial institutions can comply with stringent new regulations and adapt to the pressures of close supervision while responsibly managing risk. It covers all important commercial banking risk management topics, including market risk, counterparty credit risk, liquidity risk, operational risk, fair lending risk, model risk, stress test, and CCAR from practical aspects. It also covers major components of enterprise risk management, a modern capital requirement framework, and the data technology used to help manage risk. Each chapter is written by an authority who is actively engaged with large commercial banks, consulting firms, auditing firms, regulatory agencies, and universities. This collection will be a trusted resource for anyone working in or studying the commercial banking industry.

Making Crystals by Design-Dario Braga 2007-02-27 An excellent overview of the manifold aspects of modern crystal engineering. From design and preparation to spectroscopy and applications, this handbook both covers and evaluates all aspects of crystal engineering. Clearly structured, it provides an overview of the current status as seen from its various angles as well as a comparison of different techniques and applications. An essential source of high quality information for everyone working in this booming and interdisciplinary field: spectroscopists, physical and inorganic chemists as well as materials scientists working in nanotechnology and the pharmaceutical industry.

Manual of Industrial Microbiology and Biotechnology-W. Hu 1999 This second edition of the bestselling Manual of Industrial Microbiology and Biotechnology brings together in one place the biological and engineering methodologies required to develop a successful industrial process, from culture isolation and development to useful product. The editors have enlisted a broad range of experts, including microbial ecologists, physiologists, geneticists, biochemists, molecular biologists, and biochemical engineers. This comprehensive perspective provides a valuable "how to" resource, the structure of which resembles the sequence of operations involved in the development of a commercial biological process and product.

Neck and Arm Pain Syndromes E-Book-Cesar Fernandez de las Penas 2011-04-12 The first of its kind, Neck and Arm Pain Syndromes is a comprehensive evidence- and clinical-based book, covering research-based diagnosis, prognosis and management of neuromusculoskeletal pathologies and dysfunctions of the upper quadrant, including joint, muscle, myofascial and neural tissue approaches. It uniquely addresses the expanding role of the various health care professions which require increased knowledge and skills in screening for contra-indications and recognizing the need for medical-surgical referral. Neck and Arm Pain Syndromes also stresses the integration of experiential knowledge and a pathophysiologic rationale with current best evidence. the only one-stop guide for examination and treatment of the upper quadrant supported by accurate scientific and clinical-based data acknowledges the expanding direct access role of the various health professions both at the entry-level and postgraduate level addresses concerns among clinicians that research is overemphasized at the expense of experiential knowledge and pathophysiologic rationale multiple-contributed by expert clinicians and researchers with an international outlook covers diagnosis, prognosis and conservative treatment of the most commonly seen pain syndromes in clinical practice over 800 illustrations demonstrating examination procedures and techniques

The Traveling Salesman Problem and Its Variations-G. Gutin 2006-05-02 A brilliant treatment of a knotty problem in computing. This volume contains chapters written by reputable researchers and provides the state of the art in theory and algorithms for the traveling salesman problem (TSP). The book covers all important areas of study on TSP, including polyhedral theory for symmetric and asymmetric TSP, branch and bound, and branch and cut algorithms, probabilistic aspects of TSP, and includes a thorough computational analysis of heuristic and metaheuristic algorithms.

Laundry Detergents-Eduard Smulders 2002-03-12 This monograph provides a comprehensive survey of the parameters involved in textile washing, in particular the action of detergents. The authors describe the physical and chemical principles of the washing process, as well as the composition, production and action of household and industrial detergents. Furthermore, products and processes in use not only in Europe but also in Japan and the USA are surveyed. A special chapter is devoted to modern methods of detergent analysis. Throughout the book particular emphasis is laid on ecological and toxicological aspects. A discussion of the economic importance of detergents and relevant information about textile types and washing machines complete the book. This publication is not only intended for specialists in industry and academia, it will also give environmental consultants, journalists and other interested readers insight into the complex field of laundry detergents.

The Pragmatic Turn-Andreas K. Engel 2016-05-27 Cognitive science is experiencing a pragmatic turn away from the traditional representation-centered framework toward a view that focuses on understanding cognition as "enactive." This enactive view holds that cognition does not produce models of the world but rather subserves action as it is grounded in sensorimotor skills. In this volume, experts from cognitive science, neuroscience, psychology, robotics, and philosophy of mind assess the foundations and implications of a novel action-oriented view of cognition. Their contributions and supporting experimental evidence show that an enactive approach to cognitive science enables strong conceptual advances, and the chapters explore key concepts for this new model of cognition. The contributors discuss the implications of an enactive approach for cognitive development; action-oriented models of cognitive processing; action-oriented understandings of consciousness and experience; and the accompanying paradigm shifts in the fields of philosophy, brain science, robotics, and psychology. Solving Problems in Technical Communication-Johndan Johnson-Eilola 2012-12-26 The field of technical communication is rapidly expanding in both the academic world and the private sector, yet a problematic divide remains between theory and practice. Here Stuart A. Selber and Johndan Johnson-Eilola, both respected scholars and teachers of technical communication, effectively bridge that gap. Solving Problems in Technical Communication collects the latest research and theory in the field and applies it to real-world problems faced by practitioners—problems involving ethics, intercultural communication, new media, and other areas that determine the boundaries of the discipline. The book is structured in four parts, offering an overview of the field, situating it historically and culturally, reviewing various theoretical approaches to technical communication, and examining how the field can be advanced by drawing on diverse perspectives. Timely, informed, and practical, Solving Problems in Technical Communication will be an essential tool for undergraduates and graduate students as they begin the transition from classroom to career.

Mining User Generated Content-Marie-Francine Moens 2014-01-28 Originating from Facebook, LinkedIn, Twitter, Instagram, YouTube, and many other networking sites, the social media shared by users and the associated metadata are collectively known as user generated content (UGC). To analyze UGC and glean insight about user behavior, robust techniques are needed to tackle the huge amount of real-time, multimedia, and multilingual data. Researchers must also know how to assess the social aspects of UGC, such as user relations and influential users. Mining User Generated Content is the first focused effort to compile state-of-the-art research and address future directions of UGC. It explains how to collect, index, and analyze UGC to uncover social trends and user habits. Divided into four parts, the book focuses on the mining and applications of UGC. The first part presents an introduction to this new and exciting topic. Covering the mining of UGC of different medium types, the second part discusses the social annotation of UGC, social network graph construction and community mining, mining of UGC to assist in music retrieval, and the popular but difficult topic of UGC sentiment analysis. The third part describes the mining and searching of various types of UGC, including knowledge extraction, search techniques for UGC content, and a specific study on the analysis and annotation of Japanese blogs. The fourth part on applications explores the use of UGC to support question-answering, information summarization, and recommendations.

Re-Inventing Africa's Development-Jong-Dae Park 2018-12-31 This open access book analyses the development problems of sub-Sahara Africa (SSA) from the eyes of a Korean diplomat with knowledge of the economic growth Korea has experienced in recent decades. The author argues that Africa's development challenges are not due to a lack of resources but a lack of management, presenting an alternative to the traditional view that Africa's problems are caused by a lack of leadership. In exploring an approach based on mind-set and nation-building, rather than unity – which tends to promote individual or party interests rather than the broader country or national interests – the author suggests new solutions for SSA's economic growth, inspired by Korea's successful economic growth model much of which is focused on industrialisation. This book will be of interest to researchers, policymakers, NGOs and governmental bodies in economics, development and politics studying Africa's economic development, and Korea's economic growth model.

Power Trains-Frank Buckingham 1991 Tells how clutches & transmissions work - gear, friction, & hydrostatic. Gives basics of service & repair of major types of drives, transmission, transaxles, & clutches used in compact equipment. Includes troubleshooting guides. It provides the reader with a list of skills & knowledge that should be learned with each chapter. CONTENTS: Basic principles, clutches, mechanical transmissions, hydrostatic transmissions, belt & chain drives, differentials, final drives, power take-offs, service & maintenance & troubleshooting.

Shadow Algorithms Data Miner-Andrew Woo 2012-06-12 Shadow Algorithms Data Miner provides a high-level understanding of the complete set of shadow concepts and algorithms, addressing their usefulness from a larger graphics system perspective. It discusses the applicability and limitations of all the direct illumination approaches for shadow generation. With an emphasis on shadow fundamentals, the book gives an organized picture of the motivations, complexities, and categorized algorithms available to generate digital shadows. It helps readers select the most relevant algorithms for their needs by placing the shadow algorithms in real-world contexts and looking at them from a larger graphics system perspective. As a result, readers know where to start for their application needs, which algorithms to begin considering, and which papers and supplemental material should be consulted for further details.

Robot Rules-Jacob Turner 2018-10-29 This book explains why AI is unique, what legal and ethical problems it could cause, and how we can address them. It argues that AI is unlike any other previous technology, owing to its ability to take decisions independently and unpredictably. This gives rise to three issues: responsibility--who is liable if AI causes harm; rights--the disputed moral and pragmatic grounds for granting AI legal personality; and the ethics surrounding the decision-making of AI. The book suggests that in order to address these questions we need to develop new institutions and regulations on a cross-industry and international level. Incorporating clear explanations of complex topics, Robot Rules will appeal to a multi-disciplinary audience, from those with an interest in law, politics and philosophy, to computer programming, engineering and neuroscience.
