BUNGA RAMPAI AKUNTANSI PUBLIK-Ana Sopanah Buku ini merupakan kumpulan tulisan dari berbagai hasil riset dengan tiga isu akuntansi publik yaitu isu akuntansi pemerintah daerah, isu organisasi publik (nirlaba), dan isu akuntansi bumdes. Dari ketiga isu tersebut menjadi 22 sub judul yang menarik untuk dibaca. Hadirnya buku ini diharapkan dapat menambah literatur bagi yang berminat mendalami dan meneliti ilmu akuntansi (sektor) publik. Sebuah peristiwa penting yang menjadi milestone perkembangan Akuntansi Publik terjadi di FEB UGM pada tanggal, 1 Desember 2018 yaitu perubahan nama dari Akuntansi Sektor Publik (ASP) menjadi Akuntansi Publik (AP) pada acara Workshop Akuntansi Publik "Posisi dan Teori Dasarnya" yang dihadiri oleh 200 peserta dari berbagai PTN/PTS se Indonesia. Penyebutan kata "sektor" menempatkan akuntansi untuk organisasi nirlaba ini sebagai subordinat atau cabang dari akuntansi yang lebih besar, dalam hal ini adalah akuntansi untuk organisasi bisnis. Oleh karena itu penggunaan kata yang tepat adalah Akuntansi Publik (tanpa sector). Akuntansi Publik adalah akuntansi yang memiliki hulu sendiri yang terpisah dari hulu Akuntansi Bisnis. Beberapa argument yang mendukung diantaranya: adanya perbedaan latar belakang pembentukan organisasi, tujuan pendirian organisasi dan cara pencapaian tujuan organisasi, serta sumber dan sifat pendanaan organisasi. Perbedaan-perbedaan ini memberikan konsekuensi perbedaan yang signifikan di antara kedua dunia akuntansi tersebut pada aspek perencanaan dan penganggaran, sistem pelaporan keuangan (akuntansi keuangan), maupun akuntansi manajemen.

This invaluable guide details both the theory and technical aspects of these techniques, and provides expert insight into streamlining implementation. Coverage includes data gathering, preprocessing, model building, and post-implementation, with comprehensive guidance on various learning techniques and the data types utilized by each. These techniques are effective for fraud detection across industry boundaries, including applications in insurance fraud, credit card fraud, anti-money laundering, healthcare fraud, telecommunications fraud, click fraud, tax evasion, and more, giving you a highly practical framework for fraud prevention. It is estimated that a typical organization loses about 5% of its revenue to fraud every year. More effective fraud detection is possible, and this book describes the various analytical techniques your organization must implement to put a stop to the revenue leak. Examine fraud patterns in historical data Utilize labeled, unlabeled, and networked data Detect fraud before the damage cascades Reduce losses, increase recovery, and tighten security The longer fraud is allowed to go on, the more harm it causes. The Psychology of Fraud-Grace M. Duffield 2001 Fraud, like other crime, can best be explained by three factors: a supply of motivated offenders, the availability of suitable targets and the absence of capable guardians-control systems or someone "to mind the store", so to speak (Cohen & Felson 1979). In this, the first of two papers, the authors focus on motivation and other psychological aspects of fraud. They identify a number of psychological correlates of fraud offending, but note that these are by no means unique to fraud, and do not necessarily differentiate fraudsters from law-abiding citizens. The other two factors, opportunities and guardianship, provide more scope for fraud control and are addressed in a companion paper on "red flags", or situational indicia, of fraud risk.

Benford's Law-Mark J. Nigrini 2012-03-09 A powerful new tool for all forensic accountants, or anyone who analyzes data that may have been altered Benford's Law gives the expected patterns of the digits in the numbers in tabulated data such as town and city populations or Madoff's fictitious portfolio returns. Those digits, in unaltered data, will not occur in equal proportions; there is a large bias towards the lower digits, so much so that nearly one-half of all numbers are expected to start with the digits 1 or 2. These patterns were originally discovered by physicist Frank Benford in the early 1930s, and have since been found to apply to all tabulated data. Mark J. Nigrini has been a pioneer in applying Benford's Law to auditing and forensic accounting, even before his groundbreaking 1999 Journal of Accountancy article introducing this useful tool to the accounting world. In Benford's Law, Nigrini shows the widespread applicability of Benford's Law and its practical uses to detect fraud, errors, and other anomalies. Explores primary, associated, and advanced tests, all described with data sets that include corporate payments data and election data Includes ten fraud detection studies, including vendor fraud, payroll fraud, due diligence when purchasing a business, and tax evasion Covers financial statement fraud, with data from Enron, AIG, and companies that were the target of hedge fund short sales Looks at how to detect Ponzi schemes, including data on Madoff, Waxenberg, and more Examines many other applications, from the Clinton tax returns and the charitable gifts of Lehman Brothers to tax evasion and number invention Benford's Law has 250 figures and uses 50 interesting authentic and fraudulent real-world data sets to explain both theory and practice, and concludes with an agenda and directions for future research. The companion website adds additional information and resources.

Finger Prints-Francis Galton 1892

Management Fraud-Robert K. Elliott 1980 Corporate impropriety and management fraud—the deliberate, material misstatement of financial statements by top management—have been staple copy for journalists in recent years. The public is clearly distressed by white collar crime in the business world, and the SEC and members of Congress have expressed deep concern over the state of the system of corporate accounting. Management frauds are of primary importance in the family of business improprieties because to a large extent the health of the capital markets rests on the confidence that financial statements are not fraudulent. Thus the detection and prevention of fraudulent financial statements goes to the heart of the functioning of the economy. By taking steps to improve their detection and deterrence of management fraud, the auditing profession and the business community can provide assurance to the public as to the effectiveness of the system of corporate accountability and, at the same time provide constructive answers to critics claiming that both groups have been indecisive in responding to the problems of management fraud. This book is intended to assist the auditing profession and the business community in responding to the problem. This book is divided into two parts. Part I explores the management fraud problem in depth. Part II presents the commissioned papers by experts in the field, i.e., Myron Uretsky, Jerry L. Turner, David R. Saunders, Donald R. Cressey, Jack Katz, Martin M. Greller, Donn B. Parker, James E. Sorensen and Thomas L. Sorensen, W. Steve Albrecht, David J. Cheerrington, I. Reed Payne, Allan V. Roe, and Marshall B. Romney.
