BACnet-H. Michael Newman 2013-08-05 This new book, by the original developer of the BACnet standards, explains how BACnet's protocols manage all basic building functions in a seamless, integrated way. BACnet is a data communication protocol for building automation and control systems, developed within ASHRAE in cooperation with ANSI and the ISO. This book explains how BACnet works with all major control systems—including those made by Honeywell, Siemens, and Johnson Controls—to manage everything from heating to ventilation to lighting to fire control and alarm systems. BACnet is used today throughout the world for commercial and institutional buildings with complex mechanical and electrical systems. Contractors, architects, building systems engineers, and facilities managers must all be cognizant of BACnet and its applications. With a real 'seat at the table,' you'll find it easier to understand the intent and use of each of the data sharing techniques, controller requirements, and opportunities for interoperability between different manufacturers' controllers and systems. Highlights include: \* A review of the history of BACnet and its essential features, including the object model, data links, network technologies, and BACnet system configurations; \* Comprehensive coverage of services including object access, file access, remote device management, and BACnet-2012's new alarm and event capabilities; \* Insight into future directions for BACnet, including wireless networking, network security, the use of IPv6, extensions for lifts and escalators, and a new set of BACnet Web Services; \* Extensive reference appendices for all objects and services; and \* Acronyms and abbreviations

Political Dissent-Derek Malone-France 2011-12-01 This is—to my knowledge—the first anthology ever published to collect great texts in the history of political dissent from across the ideological spectrum and throughout world history. It provides a diverse set of historically important pieces of political dissent writing that connect to a range of disciplines, including history, political theory, philosophy, rhetoric, and religion and would make an excellent textbook for introductory courses in these fields, as well as in freshman composition courses.

The Human Record-Alfred J. Andrea 2007-11-01 [This is] a source collection that traces the course of human history from the rise of the earliest civilizations to the present. [This book traces] the gradual establishment of Western global hegemony; the simultaneous historical developments in other civilizations and societies around the world; the anti-Western, anticolonial movements of the twentieth century; and the emergence of the twenty-first century's integrated but still often bitterly divided world. -Pref.

Ethno-Epistemology-Masaharu Mizumoto 2020-05-17 This volume features new perspectives on the implications of cross-linguistic and cultural diversity for epistemology. It brings together philosophers, linguists, and scholars working on knowledge traditions to advance work in epistemology that moves beyond the Anglophone sphere. The first group of chapters provide evidence of cross-linguistic or cultural diversity relevant to epistemology and discuss its possible implications. These essays defend epistemic pluralism based on Sanskrit data as a commitment to pluralism about epistemic stances, analyze the use of two Japanese knowledge verbs in relation to knowledge how, explore the Confucian notion of justification, and surveys cultural differences about the testimonial knowledge. The second group of chapters defends "core monism"—which claims that despite the cross-linguistic diversity of knowledge verbs, there is certain core epistemological meaning shared by all languages—from both a Natural Semantic Metalanguage (NSM) and skeptical perspective. The third cluster of essays considers the implications of cultural diversity for epistemology based on anthropological studies. These chapters explore real disparities in folk epistemology across cultures. Finally, the last two chapters discuss methods or perspectives to unify epistemology despite and based on the diversity of folk intuitions and epistemological concepts. Ethno-Epistemology is an essential resource for philosophers working in epistemology and comparative philosophy, as well as linguists and cultural anthropologists interested in the cultural-linguistic diversity of knowledge traditions.

American History Firsthand-Peter J. Frederick 2007 Designed to give students an up-close and personal view of history, American History First Hand: Working with Primary Sources offers students the opportunity to experience written documents, visual materials, material culture artifacts, and maps—the materials historians actually work with to decipher the past. Completely unique in this market, American History First Hand: Working with Primary Sources is innovative and exciting, allowing students to learn first-hand what history is and what historians actually do. In each volume, there are 12 archives, with each archive containing loose facsimiles for students to explore. In addition to the documents, students will also obtain a first four-page introduction that describes the issues and themes of the folders. Pedagogical materials will help them explore the ramifications of these sources, as they practice the art of historical analysis.

The Infinet-John Akers 2017-11 In the near future, a device called the Univiz that can seamlessly switch between augmented and virtual reality has revolutionized how people interact with the world and each other. It's inventor, Oreste Pax, is now the head of the largest company in the world, but he is facing a shareholder revolt. Pax's only hope for keeping control of his company lies with a new project he hopes will do for human cognition what the Univiz did for personal computing. However, unbeknownst to Pax, a brilliant sociopath called the Mechanic has unleashed a world-wide computer virus that is well on its way to tearing apart the fragile bonds holding human society together. Pax will soon be torn away from his concerns over his company's future by a mysterious source attempting to fight the virus with a quantum computer they call the Infinet. Pax will have to make a decision that will affect the future of the human race, and the choice of what to do is his, and his alone.

Garden History-Tom Turner 2005 An updated version of this book is now available as European Gardens (2011), also by Tom Turner. Expanding into other regions are Asian Gardens (2010) and the forthcoming British Gardens, both also by Turner and published by Routledge. Tom Turner, well-known teacher and writer in landscape architecture, garden design and garden history here explores more than 150 gardens over four millennia of Western garden design. He considers the why, the what, the how and the where of garden design by tracing the development of gardens through history and across social, political and philosophical boundaries. Fully illustrated throughout, each chapter critically examines a particular type of garden both as part of a wider socio-political context and as an aesthetic entity, asking how the design of each garden reflects the philosophical approach of its creator. Inspirational, reflective and informative, this book brings together knowledge and understanding from a diverse range of related interests to add depth and breadth to a fascinating subject.

Wolf's Coming!-Joe Kulka 2014-01-01 As a distant howl echoes through the forest, animals quickly stop what they're doing and run for home. Look out—Wolf's coming! As the shadowy figure gets closer and closer and the day draws to a close, the animals shut the door, pull the shades, and turn out the lights. Soon the wolf's glowing eyes appear at the window and the front door opens. . . . But things are not as they seem in this suspenseful, clever story, and it's the reader who's in for the biggest surprise of all!

Gardens, Knowledge and the Sciences in the Early Modern Period-Hubertus Fischer 2016-06-03 This volume focuses on the outstanding contributions made by botany and the mathematical sciences to the genesis and development of early modern garden art and garden culture. The many facets of the mathematical sciences and botany point to the increasingly "scientific" approach that was being adopted in and applied to garden art and garden culture in the early modern period. This development was deeply embedded in the philosophical, religious, political, cultural and social contexts, running parallel to the beginning of processes of scientization so characteristic for modern European history. This volume strikingly shows how these various developments are intertwined in gardens for various purposes.

Demonology and Witch-Hunting in Early Modern Europe-Julian Goodare 2020-07-20 Demonology - the intellectual study of demons and their powers - contributed to the prosecution of thousands of witches. But how exactly did intellectual ideas relate to prosecutions? Recent scholarship has shown that some of the demonologists' concerns remained at an abstract intellectual level, while some of the judges' concerns reflected popular culture. This book brings demonology and witch-hunting back together, while placing both topics in their specific regional cultures. The book's chapters, each written by a leading scholar, cover most regions of Europe, from Scandinavia and Britain through to Germany, France and Switzerland, and Italy and Spain. By focusing on various intellectual levels of demonology, from sophisticated demonological thought to the development of specific demonological ideas and ideas within the witch trial environment, the book offers a thorough examination of the relationship between demonology and witch-hunting. Demonology and Witch-Hunting in Early Modern Europe is essential reading for all students and researchers of the history of demonology, witch-hunting and early modern Europe.

Dan Tesene-Dan Tesene 2016-07-16 The drawings which compose Sketchbook Works Vol. 1 & 2 were developed through pain staking processes of organized mark making within the rigid confines of the grid. The production of these works employ traditional methods of drawing, as well as unconventional modes such as tediously mixing a vast array of custom marker colors for perfect gradients, laser engraving miniature patterns onto pages, and using destructive craft processes like dissolving imagery with chemical solvents. These drawing processes craft a diverse array of visual experiences derived not only from organized drawing systems, but also from mistakes and destructive actions, whose results were sources of evolution seen in this body of work.

If Two Are Dead-Jonathan Carriel 2012-04-17 "Misadventure?" A partner of the shipping rm that employs young Thomas Dordrecht was known to be in good health and traveling from Pennsylvania to New York City. Yet his corpse is discovered at dawn in a Manhattan alleyway-and the coroner is unable to specify a cause of death. As the sta grieves, Dordrecht takes it upon himself to parse clues to the man's inexplicable demise, but he is soon interrupted by a long-planned business venture to the Caribbean. Months later, back at home, still dogged by unsatis ed curiosity, Dordrecht latches onto one fortuitous clue-unusual playing cards found on the victim's person-and tenaciously pursues the mystery from Long Island across New Jersey to Philadelphia. And once he realizes the victim was murdered in cold blood, he will not rest until he uncovers how, by whom, and why.

Satisfying the longing in Melodie's entrancing blue eyes was a glitch in Roman's plan. Convinced she'd been sent by his enemy, he intended to simply punish her! Except it seems that Melodie was innocent, and now Roman's plan takes a different turn... Could his vows of revenge become vows of marriage?

Cognitive Science-Rom Harré 2002-02-18 This is the first major textbook to offer a truly comprehensive review of cognitive science in its fullest sense. Ranging from artificial intelligence models of neural processes and cognitive psychology to recent discursive and cultural theories, Rom Harré offers an original yet accessible integration of the field. At its core, this textbook addresses the question "How can psychology become a science?". The answer is based on a clear account of method and explanation in the natural sciences and how they can be adapted to psychological research. Rom Harré has used his experience of both the natural and the human sciences to create a text on which exciting and insightful courses can be built in many ways. The text is based on the idea that underlying the long history of attempts to create a scientific psychology there are many unexamined presuppositions that must be brought to light. Whether describing language, categorization, memory, the brain or connectionism the book always links our intuitions about how we think, feel and act in the contexts of everyday life to the latest accounts of the neural tools with which we accomplish the cognitive tasks demanded of us. Computational and biological models are used to link the discursive analysis of everyday cognition to the necessary activities of the brain and nervous system. Fluently written and well structured, this is an ideal text for students who want to gain a comprehensive view of the current state of the art with its seeming divergence into studies of meanings and studies of biology. The book is divided into four basic modules, with suggestions for three lectures in each. The plan is related to the overall pattern of the semester programme. The reader is guided with helpful learning points, sections of study questions for review, and key readings for each chapter. Cognitive Science: A Philosophical Introduction, with its remarkable sweep of themes, past and present, truly introduces 'the science of the mind' for a new generation of psychology students. Cognitive Science should be indispensable reading for students at all levels taking courses in cognitive science and cognitive psychology, and useful additional course reading in other areas such as social psychology, artificial intelligence, philosophy of the mind and linguistics. Key Points · First major textbook to provide a link between computational, philosophical and biological models in an accessible format for students. Presents a new vision of psychology as a scientific discipline. · Breadth of coverage - ranging from artificial intelligence, to key themes & theories in cognitive science (past and present) - language, memory, the brain and behaviour - to recent discursive and cultural theories. · Plenty of student features to help the student and tutor including helpful learning points, study and essay questions and key readings at the end of every chapter.

Consciousness in Indian Philosophy-Sthaneshwar Timalcina 2008-10-27 This book focuses on the analysis of pure consciousness as found in Advaita Vedanta, one of the main schools of Indian philosophy. According to this tradition, reality is identified as Brahman, the world is considered illusory, and the individual self is identified with the absolute reality. Advaitins have various approaches to defend this argument, the central one being the doctrine of 'awareness only' (cinmatra). Following this stream of argument, what consciousness grasps immediately is consciousness itself, and the notions of subject and object arise due to ignorance. This doctrine categorically rejects the plurality of individual selves and the reality of objects of perception. Timalcina analyzes the nature of consciousness as understood in Advaita. He first explores the nature of reality and pure consciousness, and then moves on to analyze ignorance as propounded in Advaita. He then presents Advaita arguments against the definitions of 'object' of cognition found in various other schools of Indian philosophy. In this process, the positions of two rival philosophical schools of Advaita and Madhva Vedanta are explored in order to examine the exchange between these two schools. The final section of the book contrasts the Yogacara and Advaita understandings of consciousness. Written lucidly and clearly, this book reveals the depth and implications of Indian metaphysics and argument. It will be of interest to scholars of Indian philosophy and Religious Studies.

The Forest Farms of Kandy-D.J. McConnell 2017-03-02 Throughout the tropical world, especially in South and Southeast Asia, tropical America, Africa and Oceania, there exists a range of forest garden farming systems. These are small, low-input, but productive and sustainable family units of highly diversified trees, palms, bushes and vines, with few conventional field crops or livestock. Providing a survey of these systems around the world and an in-depth analysis of the farms around Kandy, Sri Lanka, this book offers an economic and ecological description and evaluation of this ancient agroforestry system and its relationship to a wide range of global agro-development and environmental problems. Guided by a table that lists some 30 socio-economic and social criteria by which all farming systems can and should be evaluated, the book presents persuasive evidence supported by comprehensive references. It also examines historical and archaeological findings in order to assess the role these tropical forests played in the general adoption of agricultural farming.

Earthly Paradises-Maureen Carroll 2003 In this beautifully illustrated book, Maureen Carroll examines the most recent evidence of the existence of ancient gardens, the horticultural practices used to plant and maintain them, and the many forms and functions they assumed. Surveying the ancient Near East, Egypt, Greece, Italy, and the provinces of the Roman Empire from the second millennium B.C. to the middle of the first millennium A.D., Carroll finds that whether grown as sources of food, symbols of wealth and prestige, or dwellings for the gods, the cultivation of gardens played an integral role in both the public and private spheres of the ancient world. She concludes with a chapter on the survival of ancient gardening traditions in the Islamic and Byzantine worlds and the ways in which gardens have figured in these cultures' perceptions and depictions of paradise. Culling evidence from a wide variety of archaeological, textual, and pictorial sources, and illustrated with delightful images from tomb and wall paintings, sculptural reliefs, manuscripts, and reconstructions, Carroll provides fascinating insights into the earthly paradises of antiquity.
