Innovation as Usual-Paddy Miller 2013-02-26 Turn team members into innovators Most organizations approach innovation as if it were a sideline activity. Every so often employees are sent to "Brainstorm Island": an off-site replete with trendy lectures, creative workshops, and overenthusiastic facilitators. But once they return, it's back to business as usual. Innovation experts Paddy Miller and Thomas Wedell-Wedellsborg suggest a better approach. They recommend that leaders at all levels become "innovation architects," creating an ecosystem in which people engage in key innovation behaviors as part of their daily work. In short, this book is about getting to a state of "innovation as usual," where regular employees—in jobs like finance, marketing, sales, or operations—make innovation happen in a way that's both systemic and sustainable. Instead of organizing brainstorming sessions, idea jams, and off-sites that rarely result in success, leaders should guide their people in what the authors call the "5 + 1 keystone behaviors" of innovation: focus, connect, tweak, select, stealthstorm, (and the + 1) persist: • Focus beats freedom: Direct people to look only for ideas that matter to the business • Insight comes from the outside: Urge people to connect to new worlds • First ideas are flawed: Challenge people to tweak and reframe their initial ideas • Most ideas are bad ideas: Guide people to select the best ideas and discard the rest • Stealthstorming rules: Help people navigate the politics of innovation • Creativity is a choice: Motivate everyone to persist in the five keystone behaviors Using examples from a wide range of companies such as Pfizer, Index Ventures, Lonza, Go Travel, Prehype, DSM, and others, Innovation as Usual lights the way toward embedding creativity in the DNA of the workplace. So cancel that off-site. Instead, read Innovation as Usual—and put innovation at the core of your business.

Organized Innovation-Steven C. Currall 2014-01-07 "Organized" and "innovation" are words rarely heard together. But an organized approach to innovation is precisely what America needs today. This book presents a blueprint for coordinating technology breakthroughs to advance America's global competitiveness and prosperity. That prosperity is at risk. As other nations bolster technology innovation efforts, America's research, development, and commercialization enterprise is falling behind. An "innovation gap" has emerged in recent decades, where US universities focus on basic research and industry concentrates on incremental product development. The country has failed to address the innovation gap because of three myths--innovation is about lone geniuses, the free market, and serendipity. These myths blind us from recognizing our dysfunctional system of unorganized innovation. In Organized Innovation, Currall, Frauenheim, Perry and Hunter provide a framework for optimizing the way America creates, develops, and commercializes technology breakthroughs. A roadmap for universities, business, and government, the book is grounded in the authors' seminal study of the National Science Foundation's Engineering Research Center program, which has returned to the US economy more than ten times the funding invested in it. For too long, our approach to technology innovation has been unorganized. The authors enable us to turn the page. They show us how to organize innovation for a more prosperous, hopeful future.

No Accident-Neil Arason 2014-04-29 It is possible to eliminate death and serious injury from Canada's roads. In other jurisdictions, the European Union, centres in the United States, and at least one automotive company aim to achieve comparable results as early as 2020. In Canada, though, citizens must turn their thinking on its head and make road safety a national priority. Since the motor vehicle first went into mass production, the driver has taken most of the blame for its failures. In a world where each person's safety is dependent on a system in which millions of drivers must drive perfectly over billions of hours behind the wheel, failure on a massive scale has been the result. When we neglect the central role of the motor vehicle as a dangerous consumer product, the result is one of the largest human-made means for physically assaulting human beings. It is time for Canadians to embrace internationally recognized ways of thinking and enter an era in which the motor vehicle by-product of human carnage is relegated to history. No Accident examines problems related to road safety and makes recommendations for the way forward. Topics include types of drivers; human-related driving errors related to fatigue, speed, alcohol, and distraction and roads; pedestrians, cyclists, and public transit; road engineering; motor vehicle regulation; auto safety design; and collision-avoidance technologies such as radar and camera-based sensors on vehicles that prevent crashes. This multi-disciplinary study demystifies the world of road safety and provides a road map for the next twenty years.

White, Time Thurgood Marshall was the twentieth century’s great architect of American race relations. His victory in the Brown v. Board of Education decision, the landmark Supreme Court case outlawing school segregation in the United States, would have made him a historic figure even if he had never been appointed as the first African-American to serve on the Supreme Court. He had a fierce will to change America, which led to clashes with Martin Luther King, Jr., Malcom X, and Robert F. Kennedy. Most surprising was Marshall’s secret and controversial relationship with the FBI chief J. Edgar Hoover.
