Strengthening Forensic Science in the United States-National Research Council 2009-07-29 Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
Ungifted-Gordon Korman 2014-02 Donovan, whose real gift is getting into trouble, finds himself at an academy for gifted students! Donovan is definitely skilled . . . at getting into trouble. Either way, a lawsuit and paying for damages. But through a strange chain of events, his name gets put on the list for the local school for gifted students: the Academy for Scholastic Distinction. Donovan knows he's not a genius, but he can't miss this chance to escape. Now, he has to figure out a way to stay at ASD - and fit in with the kids there. And who knows, maybe his real gift will come to light . . . A new story from the master of middle-grade and YA humour Gordon Korman, Ungifted is a funny exploration of the special (and often surprising) talents that make each of us gifted in our own way.

100 Cases in Clinical Medicine, Second Edition-John Rees 2011-12-09 100 Cases in Clinical Medicine is an indispensable revision tool for medical students preparing for clinical examinations or OSCEs. Using scenarios which mimic daily life, the cases will interest students in clinical problems and help them develop their clinical reasoning skills, with each case presenting details of a patient's medical history and the key findings of a clinical examination, together with initial investigation results for evaluation. Key questions then prompt the student to evaluate the patient, and reach a decision regarding their condition and the possible management plan, while the answer pages will help the student to understand the processes that a clinician goes through in dealing with the problems presented. Contents are organised to provide a quick review of each body system, with a selection of cases relevant to that specific system, then the majority are presented randomly to mimic real life in a GP surgery or emergency department. New to this edition: a review of each body system as well as random cases; new page design with a second colour used throughout; and brought up-to-date with 25% new cases.

Doktor Glass-Thomas Brennan 2012-12-31 In an age of Zeppelins and gyroplanes, atomics and horseless carriages, the Transatlantic Span is the industrial marvel of the nineteenth century. A monumental feat of engineering, the steel suspension bridge stretches across the Atlantic from Liverpool to the distant harbor of New York City, supported by no less than seven hundred towers. But in the shadows of its massive struts, on the docks of the River Mersey, lies a faceless corpse... Inspector Matthew Langton is still seized with grief when he thinks of Sarah, his late wife. Tortured by nightmares and afflicted by breathless attacks of despair and terror, he forces himself to focus on the investigation of the faceless man. The victim wears the uniform of the Transatlantic Span Company but bears the tattoos of the Boers—could there be a Boer conspiracy to assassinate Queen Victoria on the upcoming Inauguration Day of the Span? But the truth, as it begins to emerge, is far more bizarre than a political coup. As additional victims turn up—each with strange, twin burn marks on their necks—Langton draws a connection between the dead man beneath the bridge and chilling rumors of the Jar Bars, soul snatchers who come under cover of night. Most frightening of all is the mythic and elusive Doktor Glass, who may not only be behind the illicit trade in souls...but who may hold the key to what happened to the inspector's own beloved wife on her deathbed...

The Fingerprint-U.s. Department of Justice 2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.
