Registries for Evaluating Patient Outcomes-Agency for Healthcare Research and Quality/AHRQ 2014-04-01 This User’s Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User’s Guide was created by researchers affiliated with AHRQ’s Effective Health Care Program, particularly those who participated in AHRQ’s DECiDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.

Applying Ethical Principles to Enrolling Older Adults with Cognitive Impairment in Research-Laura R. Holtz 2020 Older adults, including those with cognitive impairment, have been largely underrepresented in research. The National Institutes of Health released a research policy which aims to increase representation across the lifespan and targets traditionally underrepresented age groups, including older adults and children. Challenges in enrolling older adults, which may contribute to the lower recruitment rates, include concerns about safety and frailty or obtaining informed consent for subjects with cognitive impairment or dementia. In addition, many studies explicitly exclude subjects with cognitive impairment. This case will explore the problem of underrepresentation of older adults in research, review ethical considerations, and describe components of decision making capacity necessary to consent for research. Strategies to address challenges in obtaining informed consent if the subject lacks decision making capacity will be discussed.

Ethics for Records and Information Management-Norman A. Mooradian 2018-12-20 The scope and reach of information, driven by the explosive growth of information technologies and content types, has expanded dramatically over the past 30 years. RIM professionals require a professional ethics to guide them in their daily practice and to form a basis for developing and implementing organizational policies, and Mooradian’s new book provides a rigorous outline of such an ethics. Taking an authoritative principles/rules based approach to the subject, this book comprehensively addresses the structure of ethics, outlining principles, moral rules, judgements, and exceptions;ethical reasoning, from meaning and logic to dilemmas and decision methods;the ethical core of RIM, discussing key topics such as organizational context, the positive value of accountability, conflicts of interest, and confidentiality;important ethical concerns like copyright and intellectual property, whistleblowing, information leaks, disclosure, and privacy; andthe relationship between RIM ethics and information governance. An essential handbook for information professionals who manage records, archives, data, and other content, this book is also an ideal teaching text for students of information ethics.
