Quick Reference Handbook for Surgical Pathologists-Natasha Rekhتمان 2011-08-27 This book is a compilation of high-yield, at-a-glance summaries for various topics on which pathologists frequently need information in a quick reference format while at the microscope (or when cramming for the boards). The authors are early-career pathologists who have compiled this book from the perspective of pathologists-in-training. The focus is not organ-based histologic criteria, but rather everything else that goes into pathologic diagnoses but is difficult to keep committed to memory. The emphasis is on immunohistochemistry, special stains, grading systems, molecular markers, tumor syndromes, and helpful clinical references. The book has a unique format in that the information is presented primarily in tables and diagrams accompanied by minimal explanatory text. It is intended to serve as a 'peripheral brain' for pathology residents and also practicing pathologists, where frequently needed information is readily accessible and easy to navigate.

Recovery-stress Questionnaire for Athletes-Michael Kellmann 2001 Recovery has long been an overlooked aspect of training for sports. Monitoring athletes with the Recovery-Stress Questionnaire for Athletesis a great step toward determining the extent to which an athlete is physically or mentally stressed and formulating strategies for recovery. In short, overtraining, burnout, and decreased performance can be dramatically reduced. The complete questionnaire package, developed by Michael Kellmann, PhD, and K. Wolfgang Kallus, PhD, provides a variety of tools to measure and track an athlete's recovery, including -two complete questionnaires (72- and 56-item forms), - manual scoring keys, -profile sheets, -a user manual that describes questionnaire development and data and profile interpretation, and -a computerized scoring database on CD. The Recovery-Stress Questionnaire for Athletesidentifies the current recovery-stress states of athletes and provides a complete picture of the extent of stress they are experiencing. The questionnaire is based on the hypothesis that an accumulation of stress in different areas of life, with insufficient opportunity for recovery, leads to a compromised psychophysical state. Stress states are based on 12 non-specific and seven sport-specific scales. These scales draw a precise profile of an athlete's state, which demonstrates the difference between the Recovery-Stress Questionnaire for Athletesand other popular measurement tools, which measure only current mood states. Evaluation based on the Recovery-Stress Questionnaire for Athletescales immediately provides valuable information on areas where improvement is needed. This information can be used to modify future behavior. The questionnaire is ideal for applied settings. As an added benefit, purchasers of the Recovery-Stress Questionnaire for Athletes: User Manualare encouraged to photocopy as many copies of the questionnaires as needed for both applied and research purposes. Recovery is vital in the sport training process as well as in everyday life. The Recovery-Stress Questionnaire for Athleteshelps users to formulate strategies to enhance recovery, making training more effective. CD-ROM Minimum System Requirements -IBM PC compatible with Pentium processor or higher -Windows 9.x/NT 4.0 or Windows 2000 -At least 16 MB RAM with 32 MB recommended -2x CD-ROM drive -15 MB hard drive space available -Inkjet or laser printer (optional) -256 colors -VGA color monitor (800 x 600) -Mouse
