It explores why, despite being seen as an important goal, health equity has not made more progress within countries and globally, and what needs to change for there to be greater success in delivering fairness. An international team of eminent experts from primarily the field of health economics describe how equity in health and health care might develop over the next decade. They examine existing and past barriers to promoting equity, citing case examples, and covering issues including access to health services and inequalities between and within countries. The Health of Nations-Gavin Mooney 2012-04-12 Why, despite vast resources being expended on health and health care, is there still so much ill health and premature death? Why do massive inequalities in health, both within and between countries, remain? In this devastating critique, internationally renowned health economist Gavin Mooney places the responsibility for these problems firmly at the door of neoliberalism. Mooney analyses how power is exercised both in health-care systems and in society more generally. In doing so, it reveals how too many vested interests hinder efficient and equitable policies to promote healthy populations, while too little is done to address the social determinants of health. Instead, Mooney argues, health services and health policy more generally should be returned to the communities they serve. Taking in a broad range of international case studies - from the UK to the US, South Africa to Cuba - this provocative book places issues of power and politics in health care systems centre stage, making a compelling case for the need to re-evaluate how we approach health care globally.

New Histories of South Africa's Apartheid-Era Bantustans-Shireen Ally 2017-06-26 The bantustans - or 'homelands' - were created by South Africa's apartheid regime as ethnically-defined territories for Africans. Granted self-governing and 'independent' status by Pretoria, they aimed to deflect the demands for full political representation by black South Africans and were shunned by the anti-apartheid movement. In 1972, Steve Biko wrote that 'politically, the bantustans are the greatest single fraud ever invented by white politicians'. With the end of apartheid and the first democratic elections of 1994, the bantustans formally ceased to exist, but their legacies remain inscribed in South Africa's contemporary social, cultural, political, and economic landscape. While the older literature on the bantustans has tended to focus on their repressive role and political illegitimacy, this edited volume offers new approaches to the histories and afterlives of the former bantustans in South Africa by a new generation of scholars. This book was originally published as various special issues of the South African Historical Journal.

Handbook of Experimental Economics Results-Charles R. Plott 2008-08-21 Experimental methods in economics respond to circumstances that are not completely dictated by accepted theory or outstanding problems. While the field of economics makes sharp distinctions and produces precise theory, the work of experimental economics sometimes appear blurred and may produce results that vary from strong support to little or partial support of the relevant theory. At a recent conference, a question was asked about where experimental methods might be more useful than field methods. Although many cannot be answered by experimental methods, there are questions that can only be answered by experiments. Much of the progress of experimental methods involves the posing of old or new questions in a way that experimental methods can be applied. The title of the book reflects the spirit of adventure that experimentalists share and focuses on experiments in general rather than forcing an organization into traditional categories that do not fit. The emphasis reflects the fact that the results do not necessarily demonstrate a consistent theme, but instead reflect bits and pieces of progress as opportunities to pose questions become recognized. This book is a result of an invitation sent from the editors to a broad range of experimenters asking them to write brief notes describing specific experimental results. The challenge was to produce pictures and tables that were self-contained so the reader could understand quickly the essential nature of the experiments and the results.

Africa's Lions-Haroon Borat 2016-11-08 Examining the economic forces that will shape Africa's future. Africa's Lions examines the economic growth experiences of six fast growing and/or economically dominant African countries. Expert African researchers offer unique perspectives into the challenges and issues in Ethiopia, Ghana, Kenya, Mozambique, Nigeria, and South Africa. Despite a growing body of research on African economies, very little has focused on the relationship between economic growth and employment outcomes at the detailed country level. A lack of empirical data has deprived policymakers of a robust evidence base on which to make informed decisions. By harnessing country-level household, firm, and national accounts data together with existing analytical country research—the authors have attempted to bridge this gap. The growth of the global working-age population to 2030 will be driven primarily by Africa, which means that the relationship between growth and employment should be understood within the context of each country's projected demographic challenge and the associated implications for employment growth. A better understanding of the structure of each country's workforce and the resulting implications for human capital development, the vulnerably employed, and the working poor, will be critical to informing the development policy agenda. As a group, the six countries profiled in Africa's Lions will largely shape the continent's future. Each country chapter focuses on the complex interactions between economic growth and employment outcomes, within the individual Africa's Lions context.

Macroeconomics Simplified-Nicoli Natrass 2014-09-11 Macroeconomics Simplified explains the intuition behind Keynesian and neoclassical macroeconomics using graphs and simple algebra. It provides students with a strong conceptual basis for understanding the tension between Keynesian and neoclassical systems that has once again come to the forefront since the 2007-08 financial crisis. The book shows how theoretical perspectives affect macroeconomic policy choices and proposes a pragmatic approach to policy that is sensitive to prevailing economic conditions. Students of economics and business alike will enjoy its concise and engaging analysis and find the applications and references to the Indian economy helpful.

Economic Incentives for Marine and Coastal Conservation-Essam Yassin Mohammed 2013-11-26 Marine and coastal resources provide millions of people with their livelihoods, such as fishing and tourism, and a range of critical additional 'ecosystem services', from biodiversity and culture to carbon storage and flood protection. Yet across the world, these resources are fast-diminishing under the weight of pollution, land clearance, coastal development, overfishing, natural disasters and climate change. This book shows how economic instruments can be used to incentivize the conservation of marine and coastal resources. It is shown that traditional approaches to halt the decline focus on regulating against destructive practices, but to little effect. A more successful strategy could be to establish schemes such as payments for ecosystem services (PES), or incorporate an element of financial incentives into existing regulatory mechanisms. Examples, both terrestrial and marine, from across the world suggest that PES can work to protect both livelihoods and environments. But to succeed, it is shown that these schemes must be underpinned by robust research, clear property rights, sound governance structures, equitable benefit sharing, and sustainable finance. Case studies are included from south and east Asia, Latin America, Africa and Australia. The book explores the prospects and challenges, and draws lessons from PES and PES-like programmes from across the globe.

Saving Lives, Buying Time-Institute of Medicine 2004-10-09 For more than 50 years, low-cost antimalarial drugs silently saved millions of lives and cured billions of debilitating infections. Today, however, these drugs no longer work against the deadliest form of malaria that exists throughout the world. Malaria deaths in sub-Saharan Africa are currently just over one million per year are rising because of increased resistance to the old, inexpensive drugs. Although effective new drugs called artemisinins are available, they are unaffordable for the majority of the affected population, even at a cost of one dollar per course. Saving Lives, Buying Time: Economics of Malaria Drugs in an Age of Resistance examines the history of malaria treatments, provides an overview of the current drug crisis, and offers recommendations on maximizing access to and effectiveness of antimalarial drugs. The book finds that most people in endemic countries will not have access to currently effective combination treatments, which should include an artemisinin, without financing from the global community. Without funding for effective treatment, malaria mortality could double over the next 10 to 20 years and transmission will intensify.

Advanced Introduction to Platform Economics-Robin Mansell 2020-08-28 Artificial intelligence-enabled digital platforms collect and process data from and about users. These companies are largely self-regulating in Western countries. How do economic theories explain the rise of a very few dominant platforms? Mansell and Steinmueller compare and contrast neoclassical, institutional and critical political economy explanations. They show how these perspectives can lead to contrasting claims about platform benefits and harms. Uneven power relationships between platform operators and their users are treated differently in these economic traditions. Sometimes leading to advocacy for regulation or for public provision of digital services. Sometimes indicating restraint and precaution. The authors challenge the reader to think beyond the inevitability of platform dominance to create new visions of how platforms might operate in the future.

Season of Hope-Alan Hirsch 2005-01-01 Offers an insight into the circumstances under which the policies were developed, implemented and reviewed, as well as a study of the outcomes. This book addresses questions such as: How

could an organisation with no previous experience of governing accomplish a peaceful transition to democracy? How did they do it and where are they going?

The Informal Economy in Developing Countries-Jean-Pierre Cling 2014-08-21 Informality is ubiquitous in most developing countries. Understanding the informal economy is therefore of utmost importance from a political, economic and social point of view. Paradoxically, despite its economic importance, knowledge is extremely limited regarding the informal economy. It remains largely unrecognized by researchers, is neglected by politicians, and is even negatively perceived as it is meant to disappear with development. This book aims to amend this situation by presenting recent high level research which studies the informal sector and informal employment. Fresh research into this subject is presented through empirical analysis which covers Asia, Africa and Latin America. Each chapter relies on data and a detailed knowledge of the context of the countries studied in order to question the dominant schools of thought on the origins and causes of informality. The results provide interesting insights into the constraints faced by informal workers, the dynamics of the informal economy and its link with poverty issues. On the basis of the evidences provided by results adequate policies could be defined to address informality issues. The principal characteristics of the informal sector testify to some profound similarities between developing countries: low qualifications and the precariousness of jobs, mediocre incomes and working conditions, atomization of production units and lack of articulation with the formal economy, etc. This general statement does not contradict the observation that there is a high level of heterogeneity in the sector and in informal employment within each country, confirmed by several chapters in this work. In the absence of a sufficient number of job creations, the informal sector essentially constitutes a refuge for workers seeking and is here to stay in the short and medium term, even in emerging countries.

Management of Business-Jerome Pitterson 2016-03

Rebel Streets and the Informal Economy-Alison Brown 2017-02-24 Street trade is a critical and highly visible component of the informal economy, linked to global systems of exchange. Yet policy responses are dismissive and evictions commonplace. Despite being progressively marginalised from public space, street traders in the global south are engaged in spatial and political battlegrounds to reclaim space, and claim de facto property rights over their place of work, through quiet infiltration, union power, or direct action. This book explores 'rebel streets', the challenges faced by informal economy actors and how organised groups are seeking to reframe legal understandings to create new claims to space and urban rights. The book sets out new thinking and a conceptual framework for improved understanding of the plural relationship between law, rights, and space for the informal economy, the contest between traditional, modernist and rights-based approaches to development, and impacts on the urban working poor. With a focus on street trading, the book seeks to reframe the legal context in which modern informal economies operate, drawing on key areas of academic inquiry and case studies of how vendors are staking claim to urban rights. The book argues for a reconceptualisation of legal instruments to provide a rights-based framework for urban work that recognises the legitimacy of urban informal economies, the scope for collective management of urban resources, and the social value of public space as a site for urban livelihoods. It will be of interest to students and scholars of geography, economics, urban studies, development studies, political studies and law.

Why Forests? Why Now?-Frances Seymour 2016-12-27 Tropical forests are an undervalued asset in meeting the greatest global challenges of our time—averting climate change and promoting development. Despite their importance, tropical forests and their ecosystems are being destroyed at a high and even increasing rate in most forest-rich countries. The good news is that the science, economics, and politics are aligned to support a major international effort over the next five years to reverse tropical deforestation. Why Forests? Why Now? synthesizes the latest evidence on the importance of tropical forests in a way that is accessible to anyone interested in climate change and development and to readers already familiar with the problem of deforestation. It makes the case to decisionmakers in rich countries that rewarding developing countries for protecting their forests is urgent, affordable, and achievable.

Tourism in the Green Economy-Maharaj Vijay Reddy 2015-06-05 The concept of the green economy has now entered mainstream policy debates and been endorsed by a range of United Nations and other organizations. The Rio+20 UN conference specifically drew attention to the green economy approach in the context of sustainable development to move away from business-as-usual practices, act to end poverty, address environmental destruction and build a bridge to the sustainable future. It is increasingly recognized that the tourism sector can make a major contribution to the green economy through more sustainable practices, climate change mitigation and ecotourism. The role of tourism sector will continue to be crucial in the post-2015 sustainable development agenda too. However, there are ambiguities about how tourism and allied industries can maximize their contribution to human well-being and ensure environmentally sustainability, embracing issues of political economy, geography and business ethics. In this context, this book provides consensus about what the green economy entails, what role tourism can play in a green economy, early responses from many countries, on-going and emerging research initiatives that will enable tourism's transition to a green economy. The chapters address three key themes: understanding the Green Economy concept and the role of tourism; responses and initiatives in greening tourism; and emerging techniques and research implications. A wide range of case studies from around the world and in different contexts is included to demonstrate the extent of the challenge and range of opportunities for the tourism industry.

The Economics of Growth-Philippe Aghion 2008-12-19 A comprehensive, rigorous, and up-to-date introduction to growth economics that presents all the major growth paradigms and shows how they can be used to analyze the growth process and growth policy design. This comprehensive introduction to economic growth presents the main facts and puzzles about growth, proposes simple methods and models needed to explain these facts, acquaints the reader with the most recent theoretical and empirical developments, and provides tools with which to analyze policy design. The treatment of growth theory is fully accessible to students with a background no more advanced than elementary calculus and probability theory; the reader need not master all the subtleties of dynamic programming and stochastic processes to learn what is essential about such issues as cross-country convergence, the effects of financial development on growth, and the consequences of globalization. The book, which grew out of courses taught by the authors at Harvard and Brown universities, can be used both by advanced undergraduate and graduate students, and as a reference for professional economists in government or international financial organizations. The Economics of Growth first presents the main growth paradigms: the neoclassical model, the AK model, Romer's product variety model, and the Schumpeterian model. The text then builds on the main paradigms to shed light on the dynamic process of growth and development, discussing such topics as club convergence, directed technical change, the transition from Malthusian stagnation to sustained growth, general purpose technologies, and the recent debate over institutions versus human capital as the primary factor in cross-country income differences. Finally, the book focuses on growth policies—analyzing the effects of liberalizing market competition and entry, education policy, trade liberalization, environmental and resource constraints, and stabilization policy—and the methodology of growth policy design. All chapters include literature reviews and problem sets. An appendix covers basic concepts of econometrics.

Tongass National Forest (N.F.), Port Houghton/ Cape Fanshaw Timber Sale Project- 1996

The Oxford Companion to the Economics of South Africa-Haroon Borat 2014-11-27 In 1994 South Africa saw the end of apartheid. The new era of political freedom was seen as the foundation for economic prosperity and inclusion. The last two decades have seen mixed results. Economic growth has been volatile. While inequalities in public services have been reduced, income inequality has increased, and poverty has remained stagnant. As the twentieth anniversary of the transition to democracy approaches in 2014, the economic policy debates in South Africa are in full flow. They combine a stocktake of the various programs of the last two decades with a forward looking discussion of strategy in the face of an ever open but volatile global economy. Underlying the discourse are basic and often unresolved differences on an appropriate strategy for an economy like South Africa, with a strong natural resource base but with deeply entrenched inherited inequalities, especially across race. This volume contributes to the policy and analytical debate by pulling together perspectives on a range of issues: micro, macro, sectoral, country wide and global, from leading economists working on South Africa. Other than the requirement that it be analytical and not polemical, the contributors were given freedom to put forward their particular perspective on their topic. The economists invited are from within South Africa and from outside; from academia and the policy world; from international and national level economic policy agencies. The contributors include recognized world leaders in South African economic analysis, as well as the very best of the younger crop of economists who are working on the study of South Africa, the next generation of leaders in thought and policy.

Coping with the Climate Crisis-Rabah Arezki 2018-07-03 Reducing carbon emissions is the most complex political and economic problem humanity has ever confronted. Coping with the Climate Crisis brings together leading experts from academia and policy circles to explore issues related to the implementation of the COP21 Paris Agreement and the challenges of accelerating the transition toward sustainable development. The book synthesizes the key insights that emerge from the latest research in climate-change economics in an accessible and useful guide for policy makers and researchers. Contributors consider a wide range of issues, including the economic implications and realities of shifting away from fossil fuels, the role of financial markets in incentivizing development and construction of sustainable infrastructure, the challenges of evaluating the well-being of future generations, the risk associated with uncertainty surrounding the pace of climate change, and how to make climate agreements enforceable. They demonstrate the need for a carbon tax, considering the issues of efficiently pricing carbon as well as the role of supply-side policies on fossil fuels. Through a range of perspectives from academic economists and practitioners in the public and private sectors who work either at the country level or under the auspices of multilateral organizations, Coping with the Climate Crisis outlines what it will take to achieve a viable, global climate-stabilization path.

The Age of Oversupply-Daniel Alpert 2014-08-26 "Daniel Alpert, a progressive Wall Street banker and economist, argues that we are living in the age of oversupply. A global labor glut, a flood of excess productive capacity, and the persistent availability of cheap money have kept the developed world in a perpetual slump--which is unlikely to right itself without new policy solutions. For decades, economists and political leaders failed to see the signs of what became a cataclysmic shift in the global economy. Distracted by a technology boom and massive debt bubble, advanced nations failed to assess the full impact of the flood of labor and capital unleashed by the end of socialist economies until the most recent financial crisis exposed it. As the BRICs (Brazil, Russia, India, and China) and others continue to poach jobs from Western Europe, Japan, and the United States, prosperity in the developed world remains under threat"--

An Introduction to Islamic Economics-Muhammad Akram Khan 1994-01-01 The contemporary economic systems have failed to solve the economic problems of mankind. The failure. of socialism is too obvious to need any documentation. The track record of capitalism is far from being promising. Although a small minority has achieved unprecedentedly high material standards of living, a vast majority lives under conditions of abject Poverty. The problems of unemployment, inflation, poverty amidst affluence, unequal distribution of wealth, frequent bouts of business recession, environmental pollution and ecological imbalance still bedevil man's present life and threaten his future. The present book contends that the Islamic economic order has the potential of ushering in an age of human bliss; and the resources to build a free, just and responsible world for everyone on the earth.
