Patient-Centered Clinical Care for African Americans-Gregory L. Hall 2019-11-27 This title is an easy-to-read guide outlining specific differences in communication, clinical therapies, medications, protocols, and other critical approaches to the care of African Americans. The book discusses a wide range of disorders impacting African Americans and takes a comprehensive and evidence-based approach to the clinical support of providers that see African American patients. Recording the worst medical outcomes of any racial/ethnic group in America, African Americans have the highest mortality, longest hospital length of stay, worst compliance with medications and referrals, and the lowest trust of the healthcare system. Indeed, there are countless well-designed studies that validate verified differences in the clinical care of a number of pervasive diseases in African Americans, including hypertension, heart disease, kidney disease, obesity, cancer, and more. Despite the widespread acknowledgement of the existence of health disparities among racial/ethnic groups, the overall outcomes for African Americans are still the most shocking. From high infant mortality to death by almost any cause, African Americans have the worst data of any other racial or ethnic group. Patient-Centered Clinical Care for African Americans, a highly practical and first-of-its-kind title, illuminates these alarming issues and represents a major contribution to the clinical literature. It will be of significant interest to all physicians, clinicians, and allied health personnel.

Patient Centered Care in Medical Imaging and Radiotherapy-Aarthi Ramlal 2013-03-26 Health investigation and treatment have moved from a clinician-centred approach to a patient-centred approach during the past few decades. Patients are now rightly regarded as empowered and informed users of health services, not passive recipients. Motivated by this philosophical shift, this new book identifies the key issues underpinning the complete delivery of 'good' patient care and considers their application in the medical radiation sciences. Taking a UK/European perspective, the authors examine how a holistic approach is related to legislation, human rights and perceived patient needs. Medical imaging and radiotherapy are front line services experienced by vast numbers of patients with acute and chronic medical conditions, including trauma and cancer. The book includes coverage of behavioural science and health psychology together with practical applications such as safe manual handling, infection control and radiation safety. This provides the reader with a comprehensive understanding of what contributes to the patient's experience in diagnostic imaging and radiotherapy. It also considers other aspects of the patient experience, such as inter-professional team working, disability, communication, clinical procedures and practice.

Patient Centered Medicine-Omur Sayligil 2017-04-12 Patient-centered medicine is not an illness-centered, a physician-centered, or a hospital-centered medicine approach. In this book, it is aimed at presenting an approach to patient-centered medicine from the beginning of life to the end of life. As indicated by W. Osler, "It is much more important to know what sort of a patient has a disease than what sort of a disease a patient has." In our day, if the physicians and healthcare professionals could consider more than the diseased organ and provide healthcare by comforting the patients by respecting their values, beliefs, needs, and preferences; informing them and their relatives at every stage; and comforting the patients physically by controlling the pain and relieving their worries and fears, patients obeying the rules of physicians would become patients with high adaptation and participation to the treatment.

Patient-Centered Healthcare-Eldo Frezza 2019-09-05 Patient-centered care is a way of thinking and doing things that considers patients partners in the development of a healthcare plan designed to meet their specific needs. It involves knowledge of the individual as a person and integrates that knowledge into their plan of care. Patient-centered care is central to the discussion of healthcare at the insurance and hospital-level. The quality of the service is evaluated more deeply from all the healthcare components, including insurance payments. It is the start of a new client- and patient-centered healthcare, which is based on a profound respect for patients and the obligation to care for them in partnership with them. Healthcare has been lacking a strategy to teach patients how to take care of themselves as much as they possibly can. In countries with socialized healthcare, patients don't go to the emergency room unless it is necessary; they have a physician on call instead. This affords more personalized care and avoids patients getting lost in the hospital system. This book advocates the critical role of patients in the health system and the need to encourage healthy living. We need to educate patients on how to be more self-aware, giving them the tools to better understand what they need to do to achieve healthy lifestyles, and the protocols and policies to sustain a better life. Prevention has always been the pinnacle of medical care. It's time to highlight and share this approach with patients and involve them as active participants in their own healthcare. This is the method on which to build the new healthcare for the next century.

Best Care at Lower Cost-Institute of Medicine 2013-06-10 America's health care system has become too complex and costly to continue business as usual. Best Care at Lower Cost explains that inefficiencies, an overwhelming amount of data, and other economic and quality barriers hinder progress in improving health and threaten the nation's economic stability and global competitiveness. According to this report, the knowledge and tools exist to put the health system on the right course to achieve continuous improvement and better quality care at a lower cost. The costs of the system's current inefficiency underscore the urgent need for a systemwide transformation. About 30 percent of health spending in 2009--roughly \$750 billion--was wasted on unnecessary services, excessive administrative costs, fraud, and other problems. Moreover, inefficiencies cause needless suffering. By one estimate, roughly 75,000 deaths might have been averted in 2005 if every state had delivered care at the quality level of the best performing state. This report states that the way health care providers currently train, practice, and learn new information cannot keep pace with the flood of research discoveries and technological advances. About 75 million Americans have more than one chronic condition, requiring coordination among multiple specialists and therapies, which can increase the potential for miscommunication, misdiagnosis, potentially conflicting interventions, and dangerous drug interactions. Best Care at Lower Cost emphasizes that a better use of data is a critical element of a continuously improving health system, such as mobile technologies and electronic health records that offer significant potential to capture and share health data better. In order for this to occur, the National Coordinator for Health Information Technology, IT developers, and standard-setting organizations should ensure that these systems are robust and interoperable. Clinicians and care organizations should fully adopt these technologies, and patients should be encouraged to use tools, such as personal health information portals, to actively engage in their care. This book is a call to action that will guide health care providers; administrators; caregivers; policy makers; health professionals; federal, state, and local government agencies; private and public health organizations; and educational institutions.

The Patient as Agent of Health and Health Care-Mark Sullivan, MD, PhD 2016-12-15 Patient-centered care for chronic illness is founded upon the informed and activated patient, but we are not clear what this means. We must understand patients as subjects who know things and as agents who do things. Bioethics has urged us to respect patient autonomy, but it has understood this autonomy narrowly in terms of informed consent for treatment choice. In chronic illness care, the ethical and clinical challenge is to not just respect, but to promote patient autonomy, understood broadly as the patients' overall agency or capacity for action. The primary barrier to patient action in chronic illness is not clinicians dictating treatment choice, but clinicians dictating the nature of the clinical problem. The patient's perspective on clinical problems is now often added to the objective-disease perspective of clinicians as health-related quality of life (HRQL). But HRQL is merely a hybrid transitional concept between disease-focused and health-focused goals for clinical care. Truly patient-centered care requires a sense of patient-centered health that is perceived by the patient and defined in terms of the patient's vital goals. Patient action is an essential means to this patient-centered health, as well as an essential component of this health. This action is not extrinsically motivated adherence, but intrinsically motivated striving for vital goals. Modern pathophysiological medicine has trouble understanding both patient action and health. The self-moving and self-healing capacities of patients can be understood only if we understand their roots in the biological autonomy of organisms. Taking the patient as the primary perceiver and producer of health has the following policy implications: 1] Care will become patient-centered only when the patient is the primary customer of care. 2] Professional health services are not the principal source of population health, and may lead to clinical, social and cultural iatrogenic injury. 3] Social justice demands equity in health capability more than equal access to health services.

Treatment Planning for Person-Centered Care-Neal Adams 2004-12-03 Requirements for treatment planning in the mental health and addictions fields are long standing and embedded in the treatment system. However, most clinicians find it a challenge to develop an effective, person-centered treatment plan. Such a plan is required for reimbursement, regulatory, accreditation and managed care purposes. Without a thoughtful assessment and well-written plan, programs and private clinicians are subject to financial penalties, poor licensing/accreditation reviews, less than stellar audits, etc. In addition, research is beginning to demonstrate that a well-developed person-centered care plan can lead to better outcomes for persons served. * Enhance the reader's understanding of the value and role of treatment planning in responding to the needs of adults, children and families with mental health and substance abuse treatment needs * Build the skills necessary to provide quality, person-centered, culturally competent and recovery / resiliency-orientated care in a changing service delivery system * Provide readers with sample documents, examples of how to write a plan, etc. * Provide a text and educational tool for course work and training as well as a reference for established practioners * Assist mental health and addictive disorders providers / programs in meeting external requirements, improve the quality of services and outcomes, and maintain optimum reimbursement

Person-centred Health Care-Stephen Buetow 2016-06-10 Person-centred health care is increasingly endorsed as a key element of high-quality care, yet, in practice, it often means patient-centred health care. This book scrutinizes the principle of primacy of patient welfare, which, although deeply embedded in health professionalism, is long overdue for critical analysis and debate. It appears incontestable because patients have greater immediate health needs than clinicians and the patient-clinician encounter is often recognized as a moral enterprise as well as a service contract. However, Buetow argues that the implication that clinician welfare is secondary can harm clinicians, patients and health system performance. Revaluing participants in health care as moral equals, this book advocates an ethic of virtue to respect the clinician as a whole person whose self-care and care from patients can benefit both parties, because their moral interests intertwine and warrant equal consideration. It then considers how to move from values including moral equality in health care to practice for people in their particular situations. Developing a genuinely inclusive concept of person-centred care - accepting clinicians as moral equals - it also facilitates the coalescence of patient-centred care and evidence-based health care. This reflective and provocative work develops a constructive alternative to the taken-for-granted principle of primacy of patient welfare. It is of interest to students and academics in the health and caring sciences, philosophy, ethics, medical humanities and health management.

Factors in Clinical Teaching which Influence the Learning of Patient-centered Care-Jacqueline A. Walker 1970

Through the Patient's Eyes-Margaret Gerteis 2002-05-03 Sponsored by the Picker/Commonwealth Program for Patient-Centered Care In this comprehensive, research-based look at the experiences and needs of patients, the authors explore models of care that can make hospitalization more humane. Through the Patient's Eyes provides insights into why some hospitals are more patient-centered than others; how physicians can become more involved in patient-centered quality efforts; and how patient-centered quality can be integrated into health care policy, standards, and regulations. The authors show how, by bringing the patient's perspective to the design and delivery of health services, providers can improve their ability to meet patient's needs and enhance the quality of care.

Substance Abuse-Michael Floyd 2002 Series Editors: Moira Stewart, Judith Belle Brown and Thomas R Freeman Primary care clinicians are often unfamiliar with new and effective methods for detecting substance abuse problems in their earliest stages, and the majority of patients with substance abuse problems remain undiagnosed. Substance Abuse is written by primary care clinicians and focused to meet the needs of primary care providers, demonstrating how the patient-centered clinical method can assist clinicians in learning how to diagnose this complex psychosocial disorder. This book describes how to use state-of-the-art screening techniques, and how to understand and motivate patients to decrease or eliminate harmful use of alcohol and drugs. It presents the latest scientific findings and gives examples of using a patient-centered approach, as well as describing specific communication skills, with samples of dialogue illustrating their use in helping substance-abusing patients. This is essential reading for all family doctors, paediatricians, gynaecologists, psychiatrists, nurses, social workers, psychologists and all clinicians whose practices include substance abusing patients. It will also appeal to counsellors, education personnel and all professionals working with substance abusing individuals.

Challenges and Solutions-Judith Belle Brown 2017-11-22 The foundation of patient-centered care is the patient-professional relationship. By exploring both the disease and patients' unique experience of illness, healthcare professionals take into consideration their individual needs as well as their emotional and physical concerns. Using narratives to describe experiences of patients and professionals, this book reveals the four interactive components of the patient-centered clinical method: exploring health, disease and illness; understanding the whole person; finding common ground; and enhancing the patient-doctor relationship. The concluding chapters illustrate ways in which all four components interact with and complement each other and can be used in unison to the immeasurable benefit of both patient and professional. The stimulating narratives are all based on recent developments in the theoretical model of patient-centred clinical care. This wide-ranging, thought-provoking text is highly relevant to a wide range of healthcare professionals as well as medical educators and healthcare students. For physicians, narratives provide insight and illumination of what it truly means to be patient-centered. They also help clinicians to examine, in a reflective manner, what it means to be a healer. From the Introduction

Person-Centred Care in Psychiatry-Gerrit Glas 2019-08-16 One of the paradoxes about psychiatry is that we have never known more about and better treated mental disorders, yet there exists so much unease about the practice of mental healthcare. Patients feel still stigmatized, psychiatrists are struggling with their roles in a rapidly changing system of healthcare, there is lack of consensus about what mental disorders are and what the focus of psychiatry should be. Person-Centred Care in Psychiatry: Self Relational, Contextual and Normative Perspectives offers a distinctive approach to two important linked conceptual issues in psychiatry: the relation between self, context, and psychopathology; and the intrinsic normativity of psychiatry as a practice. Divided in two parts, this book shows how the clinical conception of psychopathology and psychiatry as normative practice are intrinsically connected, and how the normative practice model can be conceived as a natural extension of the analysis of the web of relations that sustain illness behaviour as well as professional role fulfilment. Person-Centred Care in Psychiatry brings these topics together for the first time against the backdrop of unease about scientific tendencies within psychiatry in an interconnected discussion that will be of interest to academics and professionals with an interest in the philosophy of psychology, psychiatry and mental health-care.

Person-centred Nursing-Brendan McCormack 2011-06-09 The concept of 'person-centredness' has become established in approaches to the delivery of healthcare, particularly with nursing, and is embedded in many international healthcare policy frameworks and strategic plans. This book explores person-centred nursing using a framework that has been derived from research and practice. Person-centred Nursing is a theoretically rigorous and practically applied text that aims to increase nurses' understanding of the principles and practices of person-centred nursing in a multiprofessional context. It advances new understandings of person-centred nursing concepts and theories through the presentation of an inductively derived and tested framework for person-centred nursing. In addition it explores a variety of strategies for developing person-centred nursing and presents case examples of the concept in action. This is a practical resource for all nurses who want to develop person-centred ways of working.
