Application of LADAR in the Analysis of Aggregate Characteristics-Linbing Wang 2012-01-01 "NCHRP Project 4-34, 'Application of LADAR in the Analysis of Aggregate Characteristics,' was conducted by Virginia Polytechnic Institute and State University, Blacksburg, Virginia, with participation by the University of Illinois at Urbana-Champaign. The objective of the project was to develop and evaluate a laser detection and ranging (LADAR) system capable of precise and accurate measurement of the aggregate characteristics of shape, volume, angularity, surface texture, specific surface area, and volumetric gradation. Ideally, the final system would be applicable to aggregate in three size categories--coarse (2 in. to #4), fine (#4 to #200), and microfine (P200)--and suitable for routine use in research, central, and field laboratories for Portland cement concrete and asphalt concrete mixture design and quality assurance. The project, which developed new equipment and computer algorithms, proved technically challenging. The project team developed a prototype Fourier transform interferometry (FTI) system with fully functional hardware and software. The system can characterize aggregate shape, angularity, texture, surface area, and volume of a wide range of aggregate sizes with high accuracy. Assembly and operation of the FTI system consisting of a chargecoupled device (CD) camera, a fringe source, a sample platform, and a software package are fully documented in the report. The accuracy and precision of the prototype FTI system are comparable to or better than those of other systems now available to automatically measure aggregate characteristics, but its current range of aggregate size--3/4 in. to #50--is narrower than desired. Extending this size range is possible in the future by using a CCD camera with a larger field of view and increasing the system resolution through appropriate selection of the equipment components."

WHO Laboratory Manual for the Examination of Human Semen and Sperm-Cervical Mucus Interaction-World Health Organisation 1999-05-13 This definitive and essential source of reference has been thoroughly up-dated and revised to meet the requirements of all laboratories involved in the analysis of human semen. The book sets out the fundamental laboratory techniques that should be employed in the diagnosis of male infertility. The text includes descriptions of how to construct a conventional semen profile and provides standardized protocols for performing several optional diagnostic procedures. Such techniques are essential in the evaluation of infertile couples and in assessing fertility in men whose sperm production is suppressed by potential anti-fertility compounds or by toxic agents: they are also of interest in forensic medicine and in connection with artificial insemination. Previous editions of this volume have established themselves as the gold standard in the area of fertility investigation and treatment: this new edition continues that tradition and will be the benchmark for setting more rigorous standards for future years.

Nursing Research Using Participatory Action Research-Mary De Chesnay, PhD, RN, PMHCNS-BC, FAAN 2014-12-05 "PAR is the ultimate in social justice practice. I suggest that PAR should be the basis for all nursing research. This book will provide you with the basics for getting started." óPatricia J. Kelly, PhD, MPH, APRN University of MissouriñKansas City (From the Foreword) Participatory action research is a qualitative research method conducted in collaboration with a community of people in order to effect changes in the community that are relevant to the residents. This is a practical, "how-to" resource for conducting participatory action research that guides readers, step by step, through planning, conducting, and disseminating nursing research using this qualitative design. It is part of a unique series of seven books devoted to nursing research using qualitative designs and methods. Examples from actual research along with author commentary illustrate potential pitfalls and challenges that may occur during the process and how to resolve them. Written by a leading scholar of nursing research and nurse experts in participatory action research, the book describes its philosophical underpinnings and state-of-the-art techniques, and provides a concrete road map for planning and conducting studies. It considers why this particular research method is best suited for a particular study, ethical considerations, and potential obstacles. The book also discusses how to ensure rigor during a study, providing examples from scholarly literature and the authors' own work. Each case example features a description of the study, including why the investigator decided to use participatory action rather than another research design, how he or she solved gatekeeper and access-to-sample issues, and institutional review board concerns. Also included is a discussion of how to collect and analyze data and how to disseminate findings to both the scientific community and research participants. With a focus on practical problem solving throughout, the book will be of value to novice and experienced nurse researchers, graduate teachers, in-service educators, students, and nursing research staff at health care institutions. Key Features: Describes, step by step, how to plan, conduct, and disseminate participatory action research Delivers new designs and methods Focuses on solving practical problems related to the conduct of research Features rich nursing exemplars in a variety of health/mental health clinical conditions in the United States and internationally

Treating Addictive Behaviors-William R. Miller 2013-06-29 About a decade ago, psychologists began exploring the commonalities among alcohol and drug abuse, smoking, and obesity. The term substance abuse evolved into the current concept of addictive behaviors, which recognizes similarities with other behaviors that do not involve consummatory responses (e. g. , pathological gambling, compulsions, sexual deviations). Professional societies and journals now have been founded in both Britain and the United States with the purpose of focusing on research and treatment in the area of addictive behaviors. As the field has evolved, new models have emerged to address the questions and puzzles that face professionals. This volume examines some of these current issues and, in particular, explores common processes of change that seem to cut across the addictive behaviors. The chapters are based on papers presented at the Third International Conference on Treatment of Addictive Behaviors, which was held at North Berwick, Scotland, in August of 1984. The conference was organized around an integrative model of stages and processes of change that has been useful in organizing new knowledge about how to intervene with addictive behaviors. This model is set forth by its authors, Jim Prochaska and Carlo DiClemente, in Chapter 1. In Chapter 2, Fred Kanfer expounds his own model of self-regulation, which overlaps nicely with the Prochaska-DiClemente framework and provides a behavioral-theoretical context.
