London Belongs to Us-Sarra Manning 2016-06-02 'Fast and funny and happy-making' Lisa Williamson, author of THE ART OF BEING NORMAL Twelve hours, two boys, one girl . . . and a whole lot of hairspray. Seventeen-year-old Sunny's always been a little bit of a pushover. But when she's sent a picture of her boyfriend kissing another girl, she knows she's got to act. What follows is a mad, twelve-hour dash around London - starting at 8pm in Crystal Palace (so far away from civilisation you can't even get the Tube there) then sweeping through Camden, Shoreditch, Soho, Kensington, Notting Hill . . . and ending up at 8am in Alexandra Palace. Along the way Sunny meets a whole host of characters she never dreamed she'd have anything in common with - least of all the devilishly handsome (and somewhat vain) French 'twins' (they're really cousins) Jean Luc and Vic. But as this love-letter to London shows, a city is only a sum of its parts, and really it's the people living there who make up its life and soul. And, as Sunny discovers, everyone - from friends, apparent-enemies, famous bands and even rickshaw drivers - is willing to help a girl on a mission to get her romantic retribution. A fast-paced, darkly funny love letter to London, boys with big hair and the joys of staying up all night.

Instrumentation, Control and Automation in Wastewater Systems-Gustaf Olsson 2005-04-30 Instrumentation, control and automation (ICA) in wastewater treatment systems is now an established and recognised area of technology in the profession. There are obvious incentives for ICA, not the least from an economic point of view. Plants are also becoming increasingly complex which necessitates automation and control. Instrumentation, Control and Automation in Wastewater Systems summarizes the state-of-the-art of ICA and its application in wastewater treatment systems and focuses on how leading-edge technology is used for better operation. The book is written for: The practising process engineer and the operator, who wishes to get an updated picture of what is possible to implement in terms of ICA; The process designer, who needs to consider the couplings between design and operation; The researcher or the student, who wishes to get the latest technological overview of an increasingly complex field. There is a clear aim to present a practical ICA approach, based on a technical and economic platform. The economic benefit of different control and operation possibilities is quantified. The more qualitative benefits, such as better process understanding and more challenging work for the operator are also described. Several full-scale experiences of how ICA has improved economy, ease of operation and robustness of plant operation are presented. The book emphasizes both unit process control and plant wide operation. Scientific & Technical Report No. 15

Personal Selling-Rolph E. Anderson 2006-03-01 In line with students' current career goals, Personal Selling focuses exclusively on professional business-to-business selling rather than retail selling. Early introduction of the Personal Selling Process (PSP) engages students from the beginning, with tools for converting prospects into customers. The authors' latest research on customer loyalty and relationship marketing further distinguishes Personal Selling from other titles, which focus less on these pressing issues. Strategies for achieving long-term customer loyalty underscore how attracting, cultivating, and retaining satisfied customers leads to higher profitability for salespeople and their organizations. Clear, conversational writing allows students to easily understand the authors' research and analysis of the field. The Second Edition includes an updated discussion of technology tools and services that facilitate sales. Chapter 2 explores the behavioral, technological, and managerial forces affecting personal selling today, and discusses numerous inexorable changes within each. In addition to new examples and photos, a new feature follows an actual sales professional through the various aspects of his job. New! Revised and reorganized, Chapter 3—now titled "Ethics and Legal Considerations in Personal Selling"—covers ethical issues that arise when dealing with prospects and customers, co-workers, and the company. Unlike other personal selling texts, the chapter also discusses sexual harassment in the workplace. New! For the Second Edition, the authors have enhanced the text's real-world focus by incorporating current research, examples, and cases from actual companies. New! New Personal Profiles focus on salespeople from diverse backgrounds, demonstrating that there is no stereotypical profile of a successful salesperson. Five of the profiles are new to this edition and include interviews with representatives from Beiersdorf, DHL, and Samsung. In addition, a specific salesperson is profiled in the core chapters to illustrate the personal selling process. New! To increase the text's visual appeal, the Second Edition features a colorful, contemporary design and new photographs in every chapter, as well as five new icons that signal the following pedagogical features: On the Frontlines, It's Up to You, From the Command Post, Keeping Up Online, and enhanced online content. Updated! The impact of technology requires today's sales professional to be more tech savvy than ever. Chapter 2, "The Dynamic Personal Selling Environment," focuses on the empowerment of salespeople who use the latest technology in order to achieve customer satisfaction and loyalty. With respect to the Internet, the text covers the use of blogs, pod-casting, screen sharing, video conferencing, and personalized e-mails in the sales process. All chapters conclude with a set of key terms, chapter review questions, topics for thought and class discussion, new role-play exercises, new Internet research exercises, projects for personal growth, and a case. An additional case is found online.

Cage Aquaculture-Malcolm C. M. Beveridge 2008-04-15 Since the first edition of this book, 17 years ago, aquaculture has consolidated its position as an important means of producing food and as a contributor to global food security. Cage aquaculture too has continued to expand apace. The third edition of this important, useful and well-received book maintains the original aim of providing a thorough synthesis of information on cages and cage aquaculture practices with data and examples encompassing all major world regions. Fully updated, the book's comprehensive contents include details of the origin and principles of cage aquaculture and an overview of its current position. Contents of the chapters following include key information on cage design and construction, site selection, environmental impacts and environmental capacity, management, and potential problems in cage aquaculture systems. A comprehensive reference list and index are included to help readers. The volume is essential reading for all personnel involved in fish and shellfish farms that use cages, and for all those embarking on a career in aquaculture. Cage manufacturers and others supplying the aquaculture trade will find much of commercial use within the book. All those involved in aquaculture research and equipment design should have a copy of this most useful book. All libraries in universities and research establishments where aquaculture, environmental science, aquatic science, fish biology and fisheries are studied and taught should have several copies on their shelves.

Quad Rotorcraft Control-Luis Rodolfo García Carrillo 2012-08-09 Quad Rotorcraft Control develops original control methods for the navigation and hovering flight of an autonomous mini-quad-rotor robotic helicopter. These methods use an imaging system and a combination of inertial and altitude sensors to localize and guide the movement of the unmanned aerial vehicle relative to its immediate environment. The history, classification and applications of UAVs are introduced, followed by a description of modelling techniques for quad-rotors and the experimental platform itself. A control strategy for the improvement of attitude stabilization in quad-rotors is then proposed and tested in real-time experiments. The strategy, based on the use of low-cost components and with experimentally-established robustness, avoids drift in the UAV's angular position by the addition of an internal control loop to each electronic speed controller ensuring that, during hovering flight, all four motors turn at almost the same speed. The quad-rotor's Euler angles being very close to the origin, other sensors like GPS or image-sensing equipment can be incorporated to perform autonomous positioning or trajectory-tracking tasks. Two vision-based strategies, each designed to deal with a specific kind of mission, are introduced and separately tested. The first stabilizes the quad-rotor over a landing pad on the ground; it extracts the 3-dimensional position using homography estimation and derives translational velocity by optical flow calculation. The second combines colour-extraction and line-detection algorithms to control the quad-rotor's 3-dimensional position and achieves forward velocity regulation during a road-following task. In order to estimate the translational-dynamical characteristics of the quad-rotor (relative position and translational velocity) as they evolve within a building or other unstructured, GPS-deprived environment, imaging, inertial and altitude sensors are combined in a state observer. The text gives the reader a current view of the problems encountered in UAV control, specifically those relating to quad-rotor flying machines and it will interest researchers and graduate students working in that field. The vision-based control strategies presented help the reader to a better understanding of how an imaging system can be used to obtain the information required for performance of the hovering and navigation tasks ubiquitous in rotored UAV operation.
