Dementia-National Collaborating Centre for Mental Health (Great Britain) 2007 The guideline on dementia is the first of its kind to fully integrate the health and social aspects of care for people with dementia into a single volume. It has been jointly developed by NICE (the National Institute for Health and Clinical Excellence) and SCIE (the Social Care Institute for Excellence). There are an estimated 700,000 people with dementia in the UK and approximately 1 million people caring for them. The guideline sets out clear recommendations, based on the best available evidence, for health and social care staff on how to work with people with dementia and their carers to significantly improve their treatment and care. This publication brings together all of the evidence that led to the recommendations in the guideline. It provides an overview of the condition and covers detection, diagnosis and assessment, and the full range of treatment and care approaches for people with dementia including promoting independence, psychological and psychosocial interventions, pharmacological treatments and palliative care. Importantly, it also addresses support and interventions for carers of people with dementia.

The Law and Ethics of Dementia-Charles Foster 2014-12-01 Dementia is a topic of enormous human, medical, economic, legal and ethical importance. Its importance grows as more of us live longer. The legal and ethical problems it raises are complex, intertwined and under-discussed. This book brings together contributions from clinicians, lawyers and ethicists - all of them world leaders in the field of dementia - and is a comprehensive, scholarly yet accessible library of all the main (and many of the fringe) perspectives. It begins with the medical facts: what is dementia? Who gets it? What are the current and future therapeutic and palliative options? What are the main challenges for medical and nursing care? The story is then taken up by the ethicists, who grapple with questions such as: is it legitimate to lie to dementia patients if that is a kind thing to do? Who is the person whose memory, preferences and personality have all been transformed by their disease? Should any constraints be placed on the sexual activity of patients? Are GPS tracking devices an unpardonable interference with the patient's freedom? These issues, and many more, are then examined through legal lenses. The book closes with accounts from dementia sufferers and their carers. It is the first and only book of its kind, and the authoritative text.

Living Well with Dementia-Shibley Rahman 2014-02-05 This unique guide provides a much needed overview of dementia care. With a strong focus on the importance of patients and families, it explores the multifaceted meaning behind patient wellbeing and its vital significance in the context of national policy.Adopting a positive, evidence-based approach, the book dispels the bleak outlook on dementia ma

Improving services and support for people with dementia-Great Britain: National Audit Office 2007-07-04 Dementia is a term for a range of progressive, terminal organic brain diseases, including Alzheimer's. Some 560,000 people in England are estimated to have dementia, with a steeply rising trend over the coming years. Some 476,000 people are unpaid carers of people with dementia. Direct costs to the NHS and social care are currently at least £3.3 billion a year, but the overall annual economic burden is estimated at £14.3 billion. This report examines what health and social care services are available for people with dementia and their unpaid carers in England and whether they are providing effective and good quality support. Until 2005 the Department of Health attached little priority to dementia, and progress was hampered by a lack of good quality data, by stigma, and by the low level of political and national focus on older people's mental health. The NAO conclude that services are not currently delivering value for money to taxpayers or people with dementia and their families. Whilst health and social care services are spending significantly on dementia, spending is late - too few people are being diagnosed or being diagnosed early enough. Early interventions that are known to be cost-effective, and which would improve quality of life, are not being made widely available. Services in the community, care homes and at the end of life are not delivering consistently or cost-effectively against the objective of supporting people to live independently as long as possible in the place of their choosing. The rapid ageing of the population means costs will rise and services are likely to become increasingly inconsistent and unsustainable without redesign. Recommendations cover: improving diagnosis and early intervention; improving management of services; gearing the system to respond to the major challenges of dementia in the future.

Life Story Work with People with Dementia-Polly Kaiser 2016-09-21 Introducing life story work, a way for people with dementia to connect with their relatives, carers and the professionals working with them. This evidence-based book explains the many benefits of life story work, with practical guidance for introducing it in a variety of settings. The authors show how life story work can empower people with dementia to inform care practitioners and family members what care and support they may need now and in the future, by taking into account their past and their future wishes and aspirations. The book includes practical information on how to get started, ethical considerations such as consent and confidentiality, and considers issues of diversity and how to address them. The voices of practitioners, researchers and family carers sit alongside those of people living with dementia to present a wide-range of perspectives on life story work.

Best of Five MCQs for the Geriatric Medicine SCE-Duncan Forsyth 2014-02-06 Best of Five MCQs for the Geriatric Medicine SCE is the first revision guide designed specifically for this new high-stakes exam. It contains 300 best of five questions with explanatory answers, each accurately reflecting the layout of questions in the exam. The book is divided into three exams for trainees to test themselves on, providing a thorough assessment of the candidate's geriatric medicine knowledge and covering all the main themes of the exam, for example, falls, dementia and delirium, palliative care, nutrition, and stroke. The explanatory answers include references to guidelines and other sources to enable candidates' further reading and study. Ideal for Geriatric Medicine Specialty Registrars, trainees revising for the Geriatric Medicine Specialty Certificate Examination or the Diploma in geriatric medicine.

Applied Neuroscience for the Allied Health Professions E-Book-Douglas McBean 2012-08-11 This brand new resource provides a solid, comprehensive and accessible foundation in neurosciences for undergraduates and pre-registration postgraduate students. Using a multidisciplinary approach, it will guide students in their understanding of the most commonly found problems in neurological rehabilitation and inform their clinical practice. The book starts with the foundation of basic neurosciences, covering the normal function and structure of the nervous system from the organism as a whole through to the molecular level. It also introduces perceptuo-motor control and learning - topics that lie at the heart of rehabilitation. The book then goes on to discuss problems that allied health professionals commonly encounter in neurological rehabilitation. Topics covered include problems with perception and movement, planning, attention and memory, communication, motivation and emotion, sleep, continence and sexuality. The book also introduces key theories and evidence underpinning both behavioural and pharmacotherapeutic interventions used in neurologcial rehabilitation. The book closes by summarising current principles underpinning best practice and also looks to the future by identifying gaps in evidence-based practice with ideas for future research and what the future may hold for neurological rehabilitation. Throughout, a variety of supplementary information boxes point towards additional material such as Case Studies which highlight the clinical relevance of topics discussed; and a variety of Research Boxes which refer to more advanced material and/or original research studies. Each chapter ends with self-assessment questions which will check progress and prompt students to reflect on how the information presented in the chapter could be applied to clinical practice. Written by a multidisciplinary team, highly experienced in teaching, research and clinical practice Lays the foundation of basic neurosciences for allied health students Accessible and comprehensive text Introduces students to key theories and evidence underpinning neurological rehabilitation Focuses on clinically relevant information End of chapter self-assessment questions of different levels of complexity

Handbook of the Clinical Psychology of Ageing-Robert T. Woods 2008-04-15 The first authoritative reference on clinical psychology and aging, the Handbook of the Clinical Psychology of Ageing was universally regarded as a landmark publication when it was first published in 1996. Fully revised and updated, the Second Edition retains the breadth of coverage of the original, providing a complete and balanced picture of all areas of clinical research and practice with older people. Contributions from the UK, North America, Scandinavia and Australia provide a broad overview of the psychology of aging, psychological problems (including depression, anxiety, psychosis, and dementia), the current social service context, and assessment and intervention techniques.

Handbook of Evidence-Based Practice in Clinical Psychology, Adult Disorders-Michel Hersen 2012-08-02 Handbook of Evidence-Based Practice in Clinical Psychology, Volume 2 covers the evidence-based practices now identified for treating adults with a wide range of DSM disorders. Topics include fundamental issues, adult cognitive disorders, substance-related disorders, psychotic, mood, and anxiety disorders, and sexual disorders. Each chapter provides a comprehensive review of the evidence-based practice literature for each disorder and then covers several different treatment types for clinical implementation. Edited by the renowned Peter Sturmey and Michel Hersen and featuring contributions from experts in the field, this reference is ideal for academics, researchers, and libraries.

Oxford Textbook of Old Age Psychiatry-Robin Jacoby 2008-02-07 The Oxford Textbook of Old Age Psychiatry is the new edition of the much loved and highly popular multi-author textbook previously published as Psychiatry in the Elderly. It has established itself as the standard textbook in its field due to its unique combination of comprehensive coverage, clear writing and authoritative and up-to-date information. This new edition maintains these strengths, with chapters covering the basic sciences underpinning old agepsychiatry, clinical practice, psychiatric services for older people, specific disorders and medico-legal and ethical issues.The text has been extensively updated, with several new chapters added reflecting developments in the speciality. These include chapters on: different psychotherapies, e.g. interpersonal therapy and cognitive behavioural therapy, and electroconvulsive therapy; memory clinics and liaison old age psychiatry; mild cognitive impairment and sleep disorders; and chapters by patients reflecting their experiences of their illnesses. The textbook has expanded to include 73 contributors from 8 differentcountries covering the panoply of relevant expertise. The editorial team has also grown with Robin Jacoby and Catherine Oppenheimer now being joined by Tom Dening and Alan Thomas.The breadth of authoritative coverage will continue to make this book one which all old age psychiatrists and trainees will want to have on their bookshelves. Geriatricians and other health professionals working with older people will also find in this book a handy resource to assist them when dealing with psychiatric disorders in older people.

Cognitive Stimulation Therapy for Dementia-Lauren A. Yates 2017-09-11 Cognitive Stimulation Therapy (CST) has made a huge global, clinical impact since its inception, and this landmark book is the first to draw all the published research together in one place. Edited by experts in the intervention, including members of the workgroup who initially developed the therapy, Cognitive Stimulation Therapy for Dementia features contributions from authors across the globe, providing a broad overview of the entire research programme. The book demonstrates how CST can significantly improve cognition and quality of life for people with dementia, and offers insight on the theory and mechanisms of change, as well as discussion of the practical implementation of CST in a range of clinical settings. Drawing from several research studies, the book also includes a section on culturally adapting and translating CST, with case studies from countries such as Japan, New Zealand and Sub-Saharan Africa. Cognitive Stimulation Therapy for Dementia will be essential reading for academics, researchers and postgraduate students involved in the study of dementia, gerontology and cognitive rehabilitation. It will also be of interest to health professionals, including psychologists, psychiatrists, occupational therapists, nurses and social workers.

Supportive Care for the Person with Dementia-Julian Hughes 2010 Supportive Care for the person with dementia provides a broad and full perspective, drawing upon the experience and expertise of a wide range of internationally-based professionals to outline a model of supportive care that will provide good quality and holistic care for people with dementia.

Challenging Behaviour in Dementia- 2017-07-05 Understanding socially disruptive behavior in dementia is never easy. Most explanations offer neither solace nor solutions for families and carers, and treatment is often characterized by policies of control and containment. The result of Graham Stokes' 15 years of clinical work with people who are challenging, this book: disputes the traditional medical model of dementia and asserts that if we reach behind the barrier of cognitive devastation and decipher the cryptic messages, it can be shown that much behavior is not meaningless but meaningful. It contrasts the medical interpretation that sees anti-social behavior as mere symptoms of disease with a person-centered interpretation that resonates change and resolution. It offers a radical and innovative interpretation of challenging behavior consistent with the new culture of dementia care, focusing on needs to be met rather than problems to be managed.

Evidence-based Nursing Care Guidelines-Betty J. Ackley 2008 From an internationally respected team of clinical and research experts comes this groundbreaking book that synthesizes the body of nursing research for 192 common medical-surgical interventions. Ideal for both nursing students and practicing nurses, this collection of research-based guidelines helps you evaluate and apply the latest evidence to clinical practice.

Eating Disorders-National Collaborating Centre for Mental Health (Great Britain) 2004 This guideline has been developed to advise on the identification, treatment and management of the eating disorders anorexia nervosa, bulimia nervosa, and related conditions. The guideline recommendations have been developed by a multidisciplinary group of health care professionals, patients and their representatives, and guideline methodologists after careful consideration of the best available evidence. It is intended that the guideline will be useful to clinicians and service commissioners in providing and planning high quality care for those with eating disorders while also emphasising the importance of the experience of care for patients and carers.

The Pool Activity Level (PAL) Instrument for Occupational Profiling-Jackie Pool 2011-10-01 This fourth edition contains all the latest research on the use of the PAL Instrument, new information on using the PAL Checklist to carry out sensory interventions and information about how a new online PAL tool supports the book. It features

photocopiable activity checklists and plans that help to match users' abilities with activities.

Primary Care and Dementia-Steve Iliffe 2001 This practice and training guide is written with the needs of health and social care professionals working with people with dementia in mind. The book is illustrated with case studies and includes a chapter on understanding and responding to the needs of the carer - such as access to information and support - and the effect on their own health.

Common Pitfalls in Cerebrovascular Disease-José Biller 2015-07-09 Clinical case studies have long been recognized as a useful adjunct to problem-based learning and continuing professional development. They emphasize the need for clinical reasoning, integrative thinking, problem-solving, communication, teamwork and self-directed learning – all desirable generic skills for health care professionals. This book is a teaching tool that bridges the gap between textbook information and everyday experience of clinicians 'in the trenches'. Leading practitioners bring a practical approach to these complex conditions, highlighting specific areas of diagnostic uncertainty in evaluation and treatment. Each case is taken from real-world clinical practice and reviews the diagnostic and treatment process in a systematic manner, identifying common challenges and potential pitfalls. This concise and useful guide in the Common Pitfalls series provides a step-by-step guide for everyday clinical practice, invaluable to anyone dealing with cerebrovascular disease on a front-line basis. The intended readership is trainees and non-specialist practitioners in neurology, stroke medicine, and neurosurgery.

Outdoor Environments for People with Dementia-Susan Rodiek 2013-04-15 Learn how gardens and parks can be beneficial to residents Mounting evidence reveals that nature and outdoor environments provide individuals with dementia greater enjoyment in life, lower stress levels, and positive changes to physical well-being. Outdoor Environments for People with Dementia explores how fulfilling the fundamental genetically based need of human relationships with nature can improve the health and well-being of people with dementia. Top experts analyze current research and comprehensively examine how the design processes of gardens and parks can be closely connected to effective interventions. Evaluation tools for those with dementia are discussed, including studies of the impact of plants and outdoor activities on this population. Outdoor Environments for People with Dementia discusses in detail practical approaches that can significantly improve the quality of life for dementia victims. Research is discussed revealing important aspects and issues needing to be addressed when creating better outdoor environments that are effective in helping residents of long term care facilities and residential care homes. The text is extensively referenced and provides several tables, figures, and photographs to clearly illustrate concepts. Topics discussed in Outdoor Environments for People with Dementia include: the impact of outdoor wandering parks and therapeutic gardens on people with dementia empirical studies on how access to and participation in nature-related activities can benefit people with dementia interventions to restore people with dementia having directed-attention fatigue evaluation tools for gardens for people with dementia research-based design recommendations for future gardens theories and empirical studies about healing gardens training staff to increase their knowledge about horticulture and encouraging them to involve residents in outdoor activities general guidelines for developing an outdoor space examination of the attributes for the superior outdoor space found in Grand Rapids, Michigan, with design recommendations for the future Outdoor Environments for People with Dementia is a valuable resource for scholars, policymakers, legislators, architects and urban planners, lending institutions, developers, landscape architects, and the lay public in general who have an interest in the subject—personal, professional, or civic.

British National Formulary- 2014

Improving Dementia Services in England-Great Britain. National Audit Office 2010 The Department of Health has developed an ambitious and comprehensive strategy for dementia, Living Well with Dementia (February 2009). Yet, despite the Department stating that dementia is now a national priority, it has not been given the levers or urgency normally expected for such a priority and there is a risk that value for money will remain poor unless these weaknesses are addressed urgently. Dementia was not included in the Department's tier 1 Vital Signs indicators for the NHS, through which it monitors performance. Other levers such as joined-up commissioning and comprehensive performance information, are not yet fully developed. Achieving transformation in the proposed five years will be very challenging. The Department does not have evidence on current and future costs and benefits; the strategy is likely to cost much more than the estimated £1.9 billion over ten years. The Department expects implementation of the strategy to be mostly funded through efficiency savings arising from the acute hospital and long-term care sectors, though the NAO foresees difficulties in achieving this. There is no basic training for healthcare professionals on how to understand and work with people with dementia. Strong leadership is also key to improving services, but this is not yet in place in local NHS and social care delivery organisations, nor is there enough joined-up working between health and social care services for people with dementia. The report points out that there are some examples of excellent practice which could already be making a difference if they were adopted across the country. But it is not clear that services are making best use of money.

Dementia-World Health Organization 2012 The report “Dementia: a public health priority” has been jointly developed by WHO and Alzheimer's Disease International. The purpose of this report is to raise awareness of dementia as a public health priority, to articulate a public health approach and to advocate for action at international and national levels.

Neuropsychiatric Symptoms of Cognitive Impairment and Dementia-Ana Verdelho 2016-11-01 This book is an up-to-date, comprehensive review of the neuropsychiatry of different types of cognitive impairment by active authorities in the field. There is an emphasis on diagnostic and management issues. Cognitive impairment both with and without criteria for dementia is covered. A critical appraisal of the methodological aspects and limitations of the current research on the neuropsychiatry of cognitive impairment and dementia is included. Unanswered questions and controversies are addressed. Non-pharmacological and pharmacological aspects of management are discussed, to provide robust information on drug dosages, side effects and interaction, in order to enable the reader to manage these patients more safely. Illustrative cases provide real life scenarios that are clinically relevant and engaging to read. Neuropsychiatric Symptoms of Cognitive Impairment and Dementia is aimed at neurologists, psychiatrists, gerontologists, and general physicians. It will also be of interest to intensive care doctors, psychologists and neuropsychologists, research and specialist nurses, clinical researchers and methodologists.

Early Psychosocial Interventions in Dementia-Jill Manthorpe 2008-11-15 For the increasing number of people diagnosed with dementia each year, treatment in the early stages can make a significant difference to their quality of life. This book provides examples of psychosocial interventions: taking into consideration the individual, social and environmental aspects of the person's life. It looks at ways of providing support at the time of diagnosis and goes on to explore a variety of interventions and services for the treatment of early dementia. Bringing together the knowledge and experiences of professionals from both the UK and Europe, the contributors describe interventions for both psychological and practical problems with case examples such as memory support groups, art therapies and assistive technologies for use in the home. This accessible book will be essential reading for practitioners and carers working with those with early dementia and will be extremely useful in both professional development and for those new to dementia care.

Clinical Psychology and People with Intellectual Disabilities-Eric Emerson 2012-03-14 Clinical Psychology & People with Intellectual Disabilities provides trainee and qualified clinical psychologists with the most up-to-date information and practical clinical skills for working with people with intellectual disabilities. Represents an invaluable training text for those planning to work with people with intellectual disabilities Includes coverage of key basic concepts, relevant clinical skills, and the most important areas of clinical practice All chapters have been fully updated with the latest evidence. New chapters cover working professionally, working with people with autism and addressing aspects of the wider social context within which people with learning disabilities live. Beneficial to related health and social care staff, including psychiatrists, nurses, and social workers

The Little Black Book of Neuropsychology-Mike R. Schoenberg 2011-01-11 From translating the patient’s medical records and test results to providing recommendations, the neuropsychological evaluation incorporates the science and practice of neuropsychology, neurology, and psychological sciences. The Little Black Book of Neuropsychology brings the practice and study of neuropsychology into concise step-by-step focus—without skimping on scientific quality. This one-of-a-kind assessment reference complements standard textbooks by outlining signs, symptoms, and complaints according to neuropsychological domain (such as memory, language, or executive function), with descriptions of possible deficits involved, inpatient and outpatient assessment methods, and possible etiologies. Additional chapters offer a more traditional approach to evaluation, discussing specific neurological disorders and diseases in terms of their clinical features, neuroanatomical correlates, and assessment and treatment considerations. Chapters in psychometrics provide for initial understanding of brain-behavior interpretation as well as more advanced principals for neuropsychology practice including new diagnostic concepts and analysis of change in performance over time. For the trainee, beginning clinician or seasoned expert, this user-friendly presentation incorporating ‘quick reference guides’ throughout which will add to the practice armentarium of beginning and seasoned clinicians alike. Key features of The Black Book of Neuropsychology: Concise framework for understanding the neuropsychological referral. Symptoms/syndromes presented in a handy outline format, with dozens of charts and tables. Review of basic neurobehavioral examination procedure. Attention to professional issues, including advances in psychometrics and diagnoses, including tables for reliable change for many commonly used tests. Special “Writing Reports like You Mean It” section and guidelines for answering referral questions. Includes appendices of practical information, including neuropsychological formulary. The Little Black Book of Neuropsychology is an indispensable resource for the range of practitioners and scientists interested in brain-behavior relationships. Particular emphasis is provided for trainees in neuropsychology and neuropsychologists. However, the easy to use format and concise presentation is likely to be of particular value to interns, residents, and fellows studying neurology, neurological surgery, psychiatry, and nurses. Finally, teachers of neuropsychological and neurological assessment may also find this book useful as a classroom text. "There is no other book in the field that covers the scope of material that is inside this comprehensive text. The work might be best summed up as being a clinical neuropsychology postdoctoral residency in a book, with the most up to date information available, so that it is also an indispensable book for practicing neuropsychologists in addition to students and residents...There is really no book like this available today. It skillfully brings together the most important foundations of clinical neuropsychology with the 'nuts and bolts' of every facet of assessment. It also reminds the more weathered neuropsychologists among us of the essential value of neuropsychological assessment...the impact of the disease on the patient's cognitive functioning and behavior may only be objectively quantified through a neuropsychological assessment." Geriatrics Models of Care-Michael L. Malone 2015-05-22 This book describes geriatrics practice models that are used to guide the care of older adults, allowing seniors to remain at home, prevent functional disability and preserve quality of life. The models include specific interventions which are performed by health care workers to address the needs of older persons and their caregivers. These models respect patient values, consider patient safety and appreciate psychosocial needs as well. Divided into six parts that discuss hospital-based models of care, transitions from hospital to home, outpatient-based models of care and emergency department models of care, this text addresses the needs of vulnerable patients and the community. Geriatric Models of Care is an excellent resource for health care leaders who must translate these programs to address the needs of the patients in their communities.

Dementia in Nursing Homes-Sandra Schüssler 2017-05-19 Written by leading international experts, this book discusses the latest advances in the field of dementia in nursing homes. The topics and findings covered are based on their survey and on a scientific literature review. Dementia is spreading worldwide, placing a growing burden on healthcare systems and caregivers, as well as those affected. With increasing and complex care needs, nursing home admission is often necessary. Globally, over half of nursing home residents suffer from dementia. The book provides essential information on the most important issues in dementia in nursing homes today, including meaningful activities, patient-/person-centered care, psychosocial interventions, challenging behavior, inclusion and support of family members, pain, staff training and education, communication, polypharmacy, quality of life, end-of-life care and advanced care planning, depression, delirium, multidisciplinary approaches, physical restraints and care dependency. Each topic is covered by an international expert in dementia. As such, the book will appeal to professional nurses, nursing scientists, nursing students, other healthcare professionals, and to a broad readership, and will provide a valuable resource for those working in nursing homes, as well as researchers in the field.

Severe Dementia-Alistair Burns 2006-05-12 The later stages of dementia are as important, if not more so, as the earlier stages, since they harbour unique characteristics and events, which profoundly affect the lives of patients and their carers. Severe dementia has not had a high profile in the clinical literature as until recently prognosis was poor and there were few beneficial interventions. With the recent licensing of memantine, clinicians finally have a drug option that will delay disease progression. Severe Dementia is the first book to focus exclusively on severe dementia. It addresses both the clinical features of the disease and the social aspects of care. Introductory chapters on the differential diagnosis, neurochemistry and molecular pathology of severe dementia set the scene for the clinical discussion. Detailed clinical chapters on cognitive function, depression, physical effects, staging and function follow. All therapeutic interventions are then discussed, including memantine, anticholinesterases, neuroleptics and non-pharmacological treatment. The final chapters review the social and economic aspects of dementia care, including family involvement, person-centered care, palliative care, ethics and health economics. Written and edited by experts in geriatric psychiatry and geriatrics, Severe Dementia is of value to all clinicians involved in the management of this complex and vulnerable group of patients. It is also of interest to general practitioners and carers in nursing homes.

Parkinson's disease dementia and dementia with Lewy bodies-Sics Editore 2015-05-21

Primary Care in Practice-Oreste Capelli 2016-05-11 The development of the Chronic Care Model (CCM) for the care of patients with chronic diseases has focused on the integration of taking charge of the patient and his family within primary care. The major critical issues in the implementation of the CCM principles are the non-application of the best practices, defined by EBM guidelines, the lack of care coordination and active follow-up of clinical outcomes, and by inadequately trained patients, who are unable to manage their illnesses. This book focuses on these points: the value of an integrated approach to some chronic conditions, the value of the care coordination across the continuum of the illness, the importance of an evidence-based management, and the enormous value of the patients involvement in the struggle against their conditions, without forgetting the essential role of the caregivers and the community when the diseases become profoundly disabling.

Timely Psychosocial Interventions in Dementia Care-Jill Manthorpe 2020-03-19 This new edited volume seeks to meet the growing need for ways to support people with dementia across the whole course and trajectory of dementia care, with a wide scope of expertise. The book addresses how practitioners and carers can apply psychosocial interventions - which take into consideration the individual, social and environmental aspects of a person's life - across this trajectory, right from the earliest stages through to practice in care home settings. Divided into four sections, each covers a different context in which people with dementia can be supported: at home; in community settings; family and carer support; and those in care homes and hospitals. In addition, there is a distinct focus throughout on evidence-based practice and its implementation in real-world settings. This book is essential reading for any practitioner and caregiver wanting to support people with dementia.

End of Life Care for People with Dementia-Murna Downs 2016-11-21 People with dementia need increasingly specialised support as they approach the end of life, and so too do their families and the professionals working with them. This book describes not only what can be done to ensure maximum quality of life for those in the final stages of the illness, but also how best to support those involved in caring for them. Emphasising the importance of being attuned to the experiences and needs of the person with dementia, the authors explain why and how they should be included in decisions relating to their end of life care. Practical strategies for ensuring physical and emotional wellbeing are provided, drawing on useful examples from practice and providing solutions to potential challenges that carers and family members will face. Dilemmas surrounding end of life care are explored in detail, including the moral dilemma of medical intervention, and the authors suggest ways of supporting family members through the process in terms of providing information, helping them adjust to change and loss, and involving them in their relative's care, and at how care staff can be supported through appropriate education and training, team building and information-giving. This is an essential resource for anyone who wishes to provide compassionate, person-centred care for a person with dementia as they approach the end of life, including care staff, nurses, social workers and related professionals.

Person-Centred Dementia Care, Second Edition-Dawn Brooker 2015-11-21 What is person-centred dementia care, and how can it be used to improve care for people from diagnosis to end of life? How can we improve services in people's own homes, in care homes, in supported housing and in hospitals? This substantially updated second edition considers recent developments in person-centred care, presenting refreshed guidelines for practice. Dawn Brooker and Isabelle Latham explain the evolution of the key principles of person-centred care that comprise the VIPS model. They describe how it has been applied in diverse service settings, and show how to put the model into practice. A new chapter dedicated to culture of care will help service managers to get to grips with this slippery concept, and includes important information on how to guard against neglectful practice. Case studies from the CHOICE programme, a research project on culture of care, demonstrate the key factors that are important for people living with advanced dementia and complex needs to live well.
