Sketch People-T. J. Banks 2012-01-12 We all have stories to tell. Sketch People is a collection of stories about people—their work, their passions, and their experiences. In this compilation by T. J. Banks, a woman tells the story of a message she received from an old family friend following the death of her late mother's dog. Another woman, a cancer survivor, recounts her long and complex journey from geologist to master gardener to environmental and safety engineer to goat's-milk soap maker. An actor and playwright talks about the inner workings of his craft, while actress Tippi Hedren reflects not on her film career but on her work with the wild cats of the Shambala refuge in Acton, California. The collection also includes an affectionate tribute to the late writer and activist Cleveland Amory, who more than lived up to his personal philosophy of "simply to be kind." Each sketch brings us a little closer to understanding how these particular folks got where they were going and what transformed them along the way— each person has a spark, a tale worth telling. "T. J. Banks offers interesting 'sketches' of writers, artists, photographers and others in Sketch People, highlighting passions, ideologies and historical accounts of each person's true story in her impacting and emotionally driven style." —Patricia Spork, Sporkette Gazette

The Figurative Artist's Handbook-Robert Zeller 2016 Written by a well-known artist and expert instructor, The Figurative Artist's Handbook offers a comprehensive, contemporary approach to the subject that instructs artists on the foundation basics and advanced techniques they need for successful figure drawing and painting. In addition to Zeller's stunning drawings and paintings, the work of over 50 of today's top practicing artists is included, so that the book will do double-duty as a hard-working how-to book and a visual treasure trove of some of the finest figurative art being created today. A must-have reference book for today's figurative artists and art students. This handbook combines three schools of thought regarding figure drawing that are, at least on the surface, at odds with each other. But with his vast teaching experience, Zeller has seen that on a deeper level they are very compatible. Such a synthesis leads to a more complete understanding of the figure. Although this comprehensive approach is reflected in contemporary art and art education, no book has ever combined all three before. Gestural- The dynamic, gestural, rhythmic understanding of the figure as practiced by the great Mannerists of the Renaissance. This philosophy emphasizes life and rhythm in the human form. Rooted in the 16th and 17th centuries. Structural- A solid architectural understanding of the structure and anatomy of the body as the basis for building solid figure drawings. Rooted in the 20th and 21st centuries. Atelier Method- A beautiful, careful, detailed understanding of surface morphology of the figure. Smooth surface rendering. Very sensual. Rooted in the 18th and 19th centuries.

Learn How to Draw Human Figures - For the Absolute Beginner-John Davidson 2013-05-15 Learn How to Draw Human Figures - For the Absolute Beginner Table of Contents Introduction: Drawing Tools Body Proportions -Body Shape -Polygonal Form -Ball Joints Arms Legs Muscle Structure Heads Clothing Proportioning the body structure properly is important when drawing a person. A disproportionate body will mislead the portrayed perspective of your subject. Or worse, the subject might look distorted and deformed. Knowing the proper length for your subject (the person or character you are drawing) can be easily achieved by drawing the head first. In this way, the traditional method in laying out the proper proportion of the body can be initiated. The traditional method of approximating the body proportion of a

subject is by using its head's size. The height of an average man is approximately eight to ten head's size tall, while a women's height is about seven to nine head's size. If your subject/character is eight heads tall then the proportions should be as follows:

- The distance of the head/face to crotch is about four heads long.
- The arms including the hands from the shoulders are closely four heads long.
- An average opened hand is usually equal to or almost one head size. While the length of a small hand can be compared to the length of the eyebrows to chin.
- The wrists are aligned or right above the level of crotch.
- The lower extremities/legs are about four heads long.

Adjustments are most effective by decreasing or increasing the length of each part by half head-size depending on your preferred height. The wideness of the chest is usually two horizontal head's size or more (two and half) depending on the body built you prefer for your subject. A subject having less than two head's size will make its actual head look too big or a body proportion too skinny. Take note that these proportions are just an approximation of an average person's body structure. The measurements can change depending on the body type you prefer to portray, such as a long-legged subject would obviously have legs longer than four heads, or perhaps a shorter upper body to give his or her lower extremities more length. Adjustments are done according to the certain body characteristic of your subject based on his/ her function or purpose. The body proportion should also match the age of your subject. A person that is eight-heads tall effectively portrays an average adult, but it is most unlikely the case when portraying a pre-teen. Considering that the subject will have a smaller head which will be used to approximate his/her height, the number of heads used to convey how tall he/she is must be decreased as well. Considering that an average man is eight heads tall...

- A young adult can be seven to seven and half heads tall
- A teenager can be six to seven heads tall.
- A young child can be five to six and half head tall.
- A toddler can be four to five heads tall.

Notice how the head measurements adjust according to their age. An individual's growth gradually decreases as he/she reaches adulthood. But certain measurements and alignments are still implied no matter how old the subject is, such as the comparative length (per head's size) of arms and legs and the same level of wrists to the crotch.
