The Technical Avalanche Protection Handbook-Florian Rudolf-Miklau 2015-04-20 Large, high-energy snow avalanches can have high destructive consequences in developed areas. Each year, avalanche catastrophes occur in many mountain regions around the globe. This causes a large number of fatalities and severe damage to buildings and infrastructure. In some mountain areas, especially in the European Alps, a high level of safety for settlement areas is attained by application of technical avalanche defense construction. Simultaneously, new risk potentials continue to emerge in mountain regions from building in endangered areas, the establishment of new roads and railway lines across the mountains and development of tourism. Consequently, the demand for technical avalanche protection is constantly increasing. During the last decades technical avalanche protection has evolved - especially in the Alpine countries Austria, Switzerland, Italy and France as well as Norway, Iceland, USA and Canada - from a specialist field to a stand-alone engineering branch. Currently avalanche defense structures and protection systems are established in practically all inhabited mountain regions worldwide. With this handbook the editors are able to provide the first comprehensive overview of the field of technical avalanche protection in the English language and establish a common "state-of-the-art". The book is based on the German edition, published in 2011, and comprises all relevant facts on fundamentals of avalanche protection technology as well as of planning, dimensioning, construction and maintenance of defense structures. The editors were able to bring together an international team of leading experts in technical avalanche protection. Authors from Austria, Switzerland, USA, Norway, Canada, Iceland, Japan, France and Italy have directly contributed to this book or supported it with essential information.

Virus Taxonomy-Andrew M.Q. King 2011 The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus organization, distinction, and structure.

Advanced Techniques in Gasless Laparoscopic Surgery-Daijo Hasimoto 1995 This book, designed primarily as a practical reference, attempts to provide a clear and pragmatic approach to the understanding of the innovative procedure in abdominal wall lifting with subcutaneous wiring. This sophisticated laparoscopic operation eliminates the conventional complications of the pneumoperitoneum method. The techniques described here do not require the use of air-tight trocars, thus allowing surgeons to operate smoothly as well as safely with better operative view and easier hemostasis, ligation, suturing, etc. This method has the additional advantage of greatly reducing the equipment and expensive disposable instruments used. This book is well illustrated with over 100 high quality and beautiful photographs.

Bioethics Yearbook-B.A. Lustig 2012-12-06 nology in New Zealand. Angeles Tan Alora reports on the Code of Pharmaceutical Marketing Practices developed by the Pharmaceutical and Health Care Association of the Philippines. Ruud ter Meulen and his colleagues provide detailed analysis of the Rummelink Commission's report on euthanasia in the Netherlands. Kazumasa Hoshino discusses the findings of the Special Committee on Gene Therapy in Japan. As such examples suggest, the activities of many governmental groups and professional advisory bodies, although varied, tend to converge upon a number of especially important issues. If one peruses the index of documents discussed in Volume Four, certain topics are more often the focus of legislation and official concern than others: withholding and withdrawing treatment, access to health care, consent to treatment and experimentation, and issues posed by HIV testing and AIDS. Such a common focus should not be exaggerated, for the discussion of topics is wide-ranging. But that commonality, when in evidence, is also not surprising. It suggests that key issues and concerns in bioethics may be widely shared among modern cultures and societies, for all the distinctiveness of a particular nation's or region's response to them. Issues of informed consent, after all, implicate more fundamental matters of respect for persons and the rights of individuals in the contexts of therapy and research. Issues of access to medical care concretize deeper questions about the nature and scope of a society's welfare obligations to its citizens.
