Featuring a wide range of topics such as community engagement, event planning, and sports management, this book is ideal for event planners, sports managers, marketers, academicians, practitioners, industry professionals, researchers, event organizers/coordinators, and students. Although including these, the subject of 'human factors' goes far beyond this to look at systems, environmental influences, and interactions with equipment, in addition to self-awareness and human interaction. All of these aspects are captured in Human Factors in Healthcare and are built into a new framework: the SHEEP model, which breaks down into five key areas: Systems, Human Interaction, Environment, Equipment, and Personal, providing a structured way to focus on adopting 'safety positive' behaviours. Written in a clear and engaging way, the book is ideal for clinicians and non-clinicians alike. Through the use of relevant real world healthcare examples and exercises the book encourages interaction and thinking, as well as illustrating how mistakes can be avoided. The book also sets out ways on how to improve the experience of patients and staff across healthcare, in particular focusing on how to improve patient safety. In light of regular news reports about patient care, Human Factors in Healthcare presents a timely and proactive approach to these issues and is essential reading for doctors, nurses, managers, and everyone working in the healthcare profession.
