Spanish-English English-Spanish Dictionary of Computer Terms-Alfredo U. Chiri 1993 What means one thing on an American computer does not always translate to a Spanish language computer, which as any programmer knows could mean big confusion. For the first time, Spanish speaking computer users and programmers have a guide through the endless myriad of computer terms and phrases established in English. Designed as a tool to promote understanding between people of different cultures and languages who are working in the computer field, this dictionary contains over 8,000 entries in English and Spanish. Author, teacher, and engineer Alfredo Chiri fills the demand for the transliteration of computer terms with this unprecedented concise dictionary. In order to avoid any local phrases, the author traveled to Argentina, Mexico, Spain, and his native country, Peru, which ensures that the translations are internationally understood. This dictionary will be indispensable to any international company doing business in Mexico and Central America, Peru, Argentina, Chile and other South American countries, as well as Spain.

Observations and Predictions of Eclipse Times by Early Astronomers-J.M. Steele 2013-04-17 Eclipses have long been seen as important celestial phenomena, whether as omens affecting the future of kingdoms, or as useful astronomical events to help in deriving essential parameters for theories of the motion of the moon and sun. This is the first book to collect together all presently known records of timed eclipse observations and predictions from antiquity to the time of the invention of the telescope. In addition to cataloguing and assessing the accuracy of the various records, which come from regions as diverse as Ancient Mesopotamia, China, and Europe, the sources in which they are found are described in detail. Related questions such as what type of clocks were used to time the observations, how the eclipse predictions were made, and how these prediction schemes were derived from the available observations are also considered. The results of this investigation have important consequences for how we understand the relationship between observation and theory in early science and the role of astronomy in early cultures, and will be of interest to historians of science, astronomers, and ancient and medieval historians.

The First Space Race-Matt Bille 2004 The First Space Race reveals the inside story of an epic adventure with world-altering stakes. From 1955 to 1958, American and Soviet engineers battled to capture the world's imagination by successfully launching the world's first satellite. The race to orbit featured two American teams led by rival services—the Army and the Navy—and a Soviet effort so secret that few even knew it existed. This race ushered in the Space Age with a saga of science, politics, technology, engineering, and human dreams. Before 1955, the concept of an artificial satellite had been demonstrated only on paper. The first nation to transform theory into practice would gain advantages in science, the Cold War propaganda contest, and the military balance of power. Visionaries such as America's Wernher von Braun and Russia's Sergey Korolev knew these fields of endeavor would be affected by the launch of a satellite. Moved by patriotism, inquisitiveness, and pride, people on both sides of the Iron Curtain put forth heroic efforts to make that first satellite possible. Some aspects of this story, like the Navy's NOTSNIK satellite project, are almost unknown. Even some details of well-known programs, such as the appearance of America's pioneering Explorer 1 satellite and the contributions made by its rival, Project Vanguard, are generally misremembered. In this book, authors Matt Bille and Erika Lishock tell the whole story of the first space race. They trace the tale from the origins of spaceflight theory and through the military and political events that engendered the all-out efforts needed to turn dreams into reality and thus shape the modern world.

The Shape of Things to Come-H. G. Wells 2019-10-06 When Dr Philip Raven, an intellectual working for the League of Nations, dies in 1930 he leaves behind a powerful legacy - an unpublished 'dream book'. Inspired by visions he has experienced for many years, it appears to be a book written far into the future: a history of humanity from the date of his death up to 2105. The Shape of Things to Come provides this 'history of the future', an account that was in some ways remarkably prescient - predicting climatic disaster and sweeping cultural changes, including a Second World War, the rise of chemical warfare, and political instabilities in the Middle East.

The Elf on the Shelf-Carol V. Aebersold 2005 The Elf on the Shelf: A Christmas Tradition is an activity the entire family will enjoy. Based on the tradition Carol Aebersold began with her family in the 1970s, this cleverly rhymed children's book explains that Santa knows who is naughty and/or nice because he sends a scout elf to every home. During the holiday season, the elf watches children by day and reports to Santa each night. When children awake, the elf has returned from the North Pole and can be found hiding in a different location. This activity allows The Elf on the Shelf to become a delightful hide-and-seek game.

Fundamentals of Aerospace Engineering-Manuel Soler 2014-01-01 The book is divided into three parts, namely: Introduction, The Aircraft, and Air Transportation, Airports, and Air Navigation. The first part is divided in two chapters in which the student must achieve to understand the basic elements of atmospheric flight (ISA and planetary references) and the technology that apply to the aerospace sector, in particular with a specific comprehension of the elements of an aircraft. The second part focuses on the aircraft and it is divided in five chapters that introduce the student to aircraft aerodynamics (fluid mechanics, airfoils, wings, high-lift devices), aircraft materials and structures, aircraft propulsion, aircraft instruments and systems, and atmospheric flight mechanics (performances and stability and control). The third part is devoted to understand the global air transport system (covering both regulatory and economical frameworks), the airports, and the global air navigation system (its history, current status, and future development). The theoretical contents are illustrated with figures and complemented with some problems/exercises. The problems deal, fundamentally, with aerodynamics and flight mechanics, and were proposed in different exams. The course is complemented by a practical approach. Students should be able to apply theoretical knowledge to solve practical cases using academic (but also industrial) software, such as MATLAB (now we are moving towards open source software such as SciLab). The course also includes a series of assignments to be completed individually or in groups. These tasks comprise an oral presentation, technical reports, scientific papers, problems, etc. The course is supplemented by scientific and industrial seminars, recommended readings, and a visit to an institution or industry related to the study and of interest to the students. All this documentation is not explicitly in the book but can be accessed online at the book's website www.aerospaceengineering.es. The slides of the course are also available at the book's website: <http://www.aerospaceengineering.es> Fundamentals of Aerospace Engineering is licensed under a Creative Commons Attribution-Non Commercial-Share Alike (CC BY-NC-SA) 3.0 License, and it is offered in open access both in "pdf" and "epub" formats. Crossroads of Colonial Cultures-Gesine Müller 2018-04-23 The study examines cultural effects of various colonial systems of government in the Spanish- and French-speaking Caribbean in a little investigated period of transition: from the French Revolution to the abolition of slavery in Cuba (1789-1886). The comparison of cultural transfer processes by means of literary production from and about the Caribbean, embedded in a broader context of the circulation of culture and knowledge deciphers the different transculturations of European discourses in the colonies as well as the repercussions of these transculturations on the motherland's ideas of the colonial other: The loss of a culturally binding centre in the case of the Spanish colonies - in contrast to France's strong presence and binding force - is accompanied by a multirelationality which increasingly shapes hispanophone Caribbean literature and promotes the pursuit for political independence. The book provides necessary revision to the idea that the 19th-century Caribbean can only be understood as an outpost of the European metropolises. Examining the kaleidoscope of the colonial Caribbean opens new insights into the early processes of cultural globalisation and questions our established concept of a genuine western modernity. One River-Wade Davis 2010-05-11 The story of two generations of scientific explorers in South America—Richard Evans Schultes and his protégé Wade Davis—an epic tale of adventure and a compelling work of natural history. In 1941, Professor Richard Evan Schultes took a leave from Harvard and disappeared into the Amazon, where he spent the next twelve years mapping uncharted rivers and living among dozens of Indian tribes. In the 1970s, he sent two prize students, Tim Plowman and Wade Davis, to follow in his footsteps and unveil the botanical secrets of coca, the notorious source of cocaine, a sacred plant known to the Inca as the Divine Leaf of Immortality. A stunning account of adventure and discovery, betrayal and destruction, One River is a story of two generations of explorers drawn together by the transcendent knowledge of Indian peoples, the visionary realms of the shaman, and the extraordinary plants that sustain all life in a forest that once stood immense and inviolable.

Science, Empire and the European Exploration of the Pacific-Tony Ballantyne 2020-10-12 This collection of essays assesses the interrelationship between exploration, empire-building and science in the opening up of the Pacific Ocean by Europeans between the early 16th and mid-19th century. It explores both the role of various sciences in enabling European imperial projects in the region, and how the exploration of the Pacific in turn shaped emergent scientific disciplines and their claims to authority within Europe. Drawing on a range of disciplines (from the history of science to geography, imperial history to literary criticism), this volume examines the place of science in cross-cultural encounters, the history of cartography in Oceania, shifting understandings of race and cultural difference in the Pacific, and the place of ships, books and instruments in the culture of science. It reveals the exchanges and networks that connected British, French, Spanish and Russian scientific traditions, even in the midst of imperial competition, and the ways in which findings in diverse fields, from cartography to zoology, botany to anthropology, were disseminated and crafted into an increasingly coherent image of the Pacific, its resources, peoples, and histories. This is a significant body of scholarship that offers many important insights for anthropologists and geographers, as well as for historians of science and European imperialism.

The Serpent and the Rainbow-Wade Davis 2010-10-05 A scientific investigation and personal adventure story about zombis and the voodoo culture of Haiti by a Harvard scientist. In April 1982, ethnobotanist Wade Davis arrived in Haiti to investigate two documented cases of zombis—people who had reappeared in Haitian society years after they had been officially declared dead and had been buried. Drawn into a netherworld of rituals and celebrations, Davis penetrated the voodoo mystique deeply enough to place zombification in its proper context within voodoo culture. In the course of his investigation, Davis came to realize that the story of voodoo is the history of Haiti—from the African origins of its people to the successful Haitian independence movement, down to the present day, where voodoo culture is, in effect, the government of Haiti's countryside. The Serpent and the Rainbow combines anthropological investigation with a remarkable personal adventure to illuminate and finally explain a phenomenon that has long fascinated Americans.

The Malaspina Expedition 1789-1794-Andrew David 2018-12-07 Among the voyages of exploration and surveying in the late 18th century, that of Alejandro Malaspina best represents the high ideals and scientific interests of the Enlightenment. Italian-born, Malaspina entered the Spanish navy in 1774. In September 1788 he and fellow-officer José Bustamante submitted a plan to the Ministry of Marine for a voyage of survey and inspection to Spanish territories in the Americas and Philippines. The expedition was to produce hydrographic charts for the use of Spanish merchantmen and warships and to report on the political, economic and defensive state of Spain's overseas possessions. The plan was approved and in July 1789 Malaspina and Bustamante sailed from Cádiz in the purpose-built corvettes, Descubierta and Atrevida. On board the vessels were scientists and artists and an array of the latest surveying and astronomical instruments. The voyage lasted more than five years. On his return Malaspina was promoted Brigadier de la Real Armada, and began work on an account of the voyage in seven volumes to dwarf the narratives of his predecessors in the Pacific such as Cook and Bougainville. Among much else, it would contain sweeping recommendations for reform in the governance of Spain's overseas empire. But Malaspina became involved in political intrigue. In November 1795 he was arrested, stripped of his rank and sentenced to life imprisonment. Although released in 1803, Malaspina spent the last seven years of his life in obscure retirement in Italy. He never resumed work on the great edition, and his journal was not published in Spain until 1885. Only in recent years has a multi-volume edition appeared under the auspices of the Museo Naval, Madrid, that does justice to the achievements of what for long was a forgotten voyage. This first volume of a series of three contains Malaspina's diario or journal from 31 July 1789 to 14 December 1790, newly translated into English, with substantial introduction and commentary. Among the places visited and described are Montevideo, Puerto Deseado, Port Egmont, Puerto San Carlos, Valparaíso, Callao, Guayaquil and Panamá. Other texts include Malaspina's introduction to his intended edition, and his correspondence with the Minister of the Marine before and during the voyage.

The Wayfinders-Wade Davis 2009 Many of us are alarmed by the accelerating rates of extinction of plants and animals. But how many of us know that human cultures are going extinct at an even more shocking rate? While biologists estimate that 18 percent of mammals and 11 percent of birds are threatened, and botanists anticipate the loss of 8 percent of flora, anthropologists predict that fully 50 percent of the 7,000 languages spoken around the world today will disappear within our lifetimes. And languages are merely the canaries in the coal mine: what of the knowledge, stories, songs, and ways of seeing encoded in these voices? In The Wayfinders, Wade Davis offers a gripping and enlightening account of this urgent crisis. He leads us on a fascinating tour through a handful of indigenous cultures, describing the worldviews they represent and reminding us of the encroaching danger to humankind's survival should they vanish.
