The editors have brought together leading researchers and therapists, who provide accounts of the prominent models of psychotherapy currently being used in cancer care, the key themes they address and the essential techniques needed to apply each approach successfully. Helpful clinical illustrations are woven throughout the book to make overt the strategies found in each model. Describes comprehensively each model of psychotherapy as taught by experts delivering the International Psycho-Oncology Society's Educational Academy on cancer care for patients and their families. Serves as a valuable tool to assist teaching and to facilitate research into psychological interventions in oncology, palliative care and bereavement. Group Therapy For Cancer Patients: A Research-based Handbook Of Psychosocial Care-David Spiegel 2008-08-01 This extraordinary resource celebrates and expands on Dr. David Spiegel's discovery that a shared intimacy with mortality creates very different concerns in the patient from those that apply in conventional settings. Meaning-Centered Group Psychotherapy for Patients with Advanced Cancer-William Breitbart 2014 The importance of spiritual well-being and the role of "meaning" in moderating depression, hopelessness and desire for death in terminally-ill cancer and AIDS patients has been well-supported by research, and has led many palliative clinicians to look beyond the role of antidepressant treatment in this population. Clinicians are focusing on the development of non-pharmacologic interventions that can address issues such as hopelessness, loss of meaning, and spiritual well-being in patients with advanced cancer at the end of life. This effort led to an exploration and analysis of the work of Viktor Frankl and his concepts of logotherapy, or meaning-based psychotherapy. While Frankl's logotherapy was not designed for the treatment of patients with life-threatening illnesses, his concepts of meaning and spirituality have inspired applications in psychotherapeutic work with advanced cancer patients, many of whom seek guidance and help in dealing with issues of sustaining meaning, hope, and understanding cancer and impending death in the context of their lives. Individual Meaning-Centered Group Psychotherapy (IMCP), an intervention developed and rigorously tested by the Department of Psychiatry & Behavioral Sciences at Memorial Sloan-Kettering Cancer Center, is a seven-week program that utilizes a mixture of didactics, discussion and experiential exercises that focus around particular themes related to meaning and advanced cancer. Patients are assigned readings and homework that are specific to each session's theme and which are utilized in each session. While the focus of each session is on issues of meaning and purpose in life in the face of advanced cancer and a limited prognosis, elements of support and expression of emotion are inevitable in the context of each group session. The structured intervention presented in this manual can be provided by a wide array of clinical disciplines, ranging from chaplains, nurses, palliative care physicians, to counselors, psychotherapists, social workers, graduate psychology students, psychologists and psychiatrists.

Psychological Aspects of Cancer-Brian I. Carr 2012-12-02 Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management opens with two essays on the biological basis of emotion/mind-driven body processes and disease. The consequence of such considerations is that since thoughts and emotions can be modulated and changed by health care professionals, psychological counseling should be seen not only as a way to help patients cope, but possibly to influence the disease itself. A unique overview of a key area of cancer care, this important title then proceeds to offer a section on genetic predispositions to cancer and the psychological considerations involved in screening and pre-emptive therapies and decision-making in cancer therapy. A third section deals with the philosophical and religious underpinnings of psychological factors involved in coping with disease state stressors and the roles of hope in coping. The fourth section is an acknowledgement that patients with cancer live in a social context, which often includes a partner and/or caregiver. The fifth section includes several essays on aspects and modalities of care-giving that are designed to help patients coping with their cancer and its aftermath, which increasingly extends for years. An important title covering key aspects of one of the most troubling disorders of our time, Psychological Aspects of Cancer: A Guide to Emotional and Psychological Consequences of Cancer, Their Causes and Their Management will provide the busy practitioner with cutting edge knowledge as well as practical information that can translate into better care for patients with cancer.

Men and masculinity are explored from multiple perspectives including evolutionary, cross-cultural, cognitive, biological, developmental, and existential viewpoints, with a focus on practical suggestions and demonstrations of successful clinical work with men. Throughout, chapters question existing models of understanding and treating men's mental health and explore new approaches, theories and interventions. This definitive handbook encapsulates a new wave of positive theory and practice in the field of male psychology and will be of great value to professionals, academics, and those working with males through the lifespan in any sector related to male mental health and wellbeing.

Cutting-edge chapters address theory, research, and practice, while capturing the diversity, evidence-base, and importance of depressive comorbidity. Psychosocial Palliative Care-William S. Breitbart MD 2014-03-25 One of the most challenging roles of the psycho-oncologist is to help guide terminally-ill patients through the physical, psychological, and spiritual aspects of the dying process. Patients with cancer, AIDS, and other life-threatening illnesses are at increased risk for the development of major psychiatric complications, and have an enormous burden of both physical and psychological symptoms. Concepts of adequate palliative care must be expanded beyond the current focus on pain and physical symptom control to include the psychiatric, psychosocial, existential, and spiritual aspects of care. The psycho-oncologist, as a consultant to or member of a palliative care team, has a unique role and opportunity to fulfill this promise of competent and compassionate palliative care for those with life-threatening illnesses. Psychosocial Palliative Care guides the psycho-oncologist through the most salient aspects of effective psychiatric care of patients with advanced illnesses. This handbook reviews basic concepts and definitions of palliative care and the experience of dying, the assessment and management of major psychiatric complications of life-threatening illness, including psychopharmacologic and psychotherapeutic approaches, and covers issues such as bereavement, spirituality, cultural sensitivity, communication and psychiatric contributions to common physical symptom control. A global perspective on death and palliative care is taken throughout the text, and an Appendix provides a comprehensive list of international palliative care resources and training programs.

Cancer Care for the Whole Patient-Institute of Medicine 2008-03-19 Cancer care today often provides state-of-the-science biomedical treatment, but fails to address the psychological and social (psychosocial) problems associated with the illness. This failure can compromise the effectiveness of health care and thereby adversely affect the health of cancer patients. Psychological and social problems created or exacerbated by cancer--including depression and other emotional problems; lack of information or skills needed to manage the illness; lack of transportation or other resources; and disruptions in work, school, and family life--cause additional suffering, weaken adherence to prescribed treatments, and threaten patients' return to health. Today, it is not possible to deliver high-quality cancer care without using existing approaches, tools, and resources to address patients' psychosocial health needs. All patients with cancer and their families should expect and receive cancer care that ensures the provision of appropriate psychosocial health services. Cancer Care for the Whole Patient recommends actions that oncology providers, health policy makers, educators, health insurers, health planners, researchers and research sponsors, and consumer advocates should undertake to ensure that this standard is met.
