Financing in Europe-Marcella Lorenzini 2018-02-19 This book explores the evolution of credit and financing in Europe from the Middle Ages through to Modern Times. It engages with the distinct political, economic and institutional frameworks of the examined areas (England, Italy, France, Germany, Spain, the Netherlands and Turkey) and discusses how these affected the credit market. It covers a wide range of different types of lending and borrowing instruments, the destination of capital, the way it was raised, and the impact it had on local or national economies in a very long run. Presented in two parts, part one of the book focuses on credit markets in the preindustrial age, in particular the period before the advent of modern joint stock banks. Part two examines the evolution of credit at the time of the emergence of modern banks. This volume will be of interest to academics and researchers in the field of finance who are interested in the historic evolution of credit and the credit market.

Understanding Loss-Judith Murray 2015-09-16 Loss and consequent grief permeates nearly every life changing event, from death to health concerns to dislocation to relationship breakdown to betrayal to natural disaster to faith issues. Yet, while we know about particular events of loss independently, we know very little about a psychology of loss that draws many adversities together. This universal experience of loss as a concept in its own right sheds light on so much of the work we do in the care of others. This book develops a new overarching framework to understand loss and grief, taking into account both pathological and wellbeing approaches to the subject. Drawing on international and cross-disciplinary research, Judith Murray highlights nine common themes of loss, helping us to understand how it is experienced. These themes are then used to develop a practice framework for structuring assessment and intervention systematically. Throughout the book, this generic approach is highlighted through discussing its use in different loss events such as bereavement, trauma, chronic illness and with children or older people. Having been used in areas as diverse as child protection, palliative care and refugee care, the framework can be tailored to a range of needs and levels of care. Caring for people experiencing loss is an integral part of the work of helping professions, whether it is explicitly part of their work such as in counselling, or implicit as in social work, nursing, teaching, medicine and community work. This text is an important guide for anyone working in these areas.

Coral Reef Remote Sensing-James A. Goodman 2013-04-18 Remote sensing stands as the defining technology in our ability to monitor coral reefs, as well as their biophysical properties and associated processes, at regional to global scales. With overwhelming evidence that much of Earth's reefs are in decline, our need for large-scale, repeatable assessments of reefs has never been so great. Fortunately, the last two decades have seen a rapid expansion in the ability for remote sensing to map and monitor the coral reef ecosystem, its overlying water column, and surrounding environment. Remote sensing is now a fundamental tool for the mapping, monitoring and management of coral reef ecosystems. Remote sensing offers repeatable, quantitative assessments of habitat and environmental characteristics over spatially extensive areas. As the multi-disciplinary field of coral reef remote sensing continues to mature, results demonstrate that the techniques and capabilities continue to improve. New developments allow reef assessments and mapping to be performed with higher accuracy, across greater spatial areas, and with greater temporal frequency. The increased level of information that remote sensing now makes available also allows more complex scientific questions to be addressed. As defined for this book, remote sensing includes the vast array of geospatial data collected from land, water, ship, airborne and satellite platforms. The book is organized by technology, including: visible and infrared sensing using photographic, multispectral and hyperspectral instruments; active sensing using light detection and ranging (LiDAR); acoustic sensing using ship, autonomous underwater vehicle (AUV) and in-water platforms; and thermal and radar instruments. **Emphasis and Audience** This book serves multiple roles. It offers an overview of the current state-of-the-art technologies for reef mapping, provides detailed technical information for coral reef remote sensing specialists, imparts insight on the scientific questions that can be tackled using this technology, and also includes a foundation for those new to reef remote sensing. The individual sections of the book include introductory overviews of four main types of remotely sensed data used to study coral reefs, followed by specific examples demonstrating practical applications of the different technologies being discussed. Guidelines for selecting the most appropriate sensor for particular applications are provided, including an overview of how to utilize remote sensing data as an effective tool in science and management. The text is richly illustrated with examples of each sensing technology applied to a range of scientific, monitoring and management questions in reefs around the world. As such, the book is broadly accessible to a general audience, as well as students, managers, remote sensing specialists and anyone else working with coral reef ecosystems.

Uncertainty Quantification and Stochastic Modeling with Matlab-Eduardo Souza de Cursi 2015-04-09 Uncertainty Quantification (UQ) is a relatively new research area which describes the methods and approaches used to supply quantitative descriptions of the effects of uncertainty, variability and errors in simulation problems and models. It is rapidly becoming a field of increasing importance, with many real-world applications within statistics, mathematics, probability and engineering, but also within the natural sciences. Literature on the topic has up until now been largely based on polynomial chaos, which raises difficulties when considering different types of approximation and does not

lead to a unified presentation of the methods. Moreover, this description does not consider either deterministic problems or infinite dimensional ones. This book gives a unified, practical and comprehensive presentation of the main techniques used for the characterization of the effect of uncertainty on numerical models and on their exploitation in numerical problems. In particular, applications to linear and nonlinear systems of equations, differential equations, optimization and reliability are presented. Applications of stochastic methods to deal with deterministic numerical problems are also discussed. Matlab® illustrates the implementation of these methods and makes the book suitable as a textbook and for self-study. Discusses the main ideas of Stochastic Modeling and Uncertainty Quantification using Functional Analysis Details listings of Matlab® programs implementing the main methods which complete the methodological presentation by a practical implementation Construct your own implementations from provided worked examples

A Room of One's Own-Virginia Woolf 2020-10-12 In October 1928 Virginia Woolf was asked to deliver speeches at Newnham and Girton Colleges on the subject of 'Women and Fiction'; she spoke about her conviction that 'a woman must have money and a room of her own if she is to write fiction'. The following year, the two speeches were published as A Room of One's Own, and became one of the foremost feminist texts. Knitted into a polished argument are several threads of great importance - women and learning, writing and poverty - which helped to establish much of feminist thought on the importance of education and money for women's independence. In the same breath, Woolf brushes aside critics and sends out a call for solidarity and independence - a call which sent ripples well into the next century. 'Brilliant interweaving of personal experience, imaginative musing and political clarity' — Kate Mosse, The Guardian 'Probably the most influential piece of non-fictional writing by a woman in this century.' — Hermione Lee, The Financial Times

Inverse Problem Theory and Methods for Model Parameter Estimation-Albert Tarantola 2005-01-01 While the prediction of observations is a forward problem, the use of actual observations to infer the properties of a model is an inverse problem. Inverse problems are difficult because they may not have a unique solution. The description of uncertainties plays a central role in the theory, which is based on probability theory. This book proposes a general approach that is valid for linear as well as for nonlinear problems. The philosophy is essentially probabilistic and allows the reader to understand the basic difficulties appearing in the resolution of inverse problems. The book attempts to explain how a method of acquisition of information can be applied to actual real-world problems, and many of the arguments are heuristic.

Aboriginal Pathways-John Gladstone Steele 2015-09-18 The first European chroniclers of Indigenous Culture in Australia looked for the sensational, often neglecting its more significant features. In his fourth book on Queensland's early history, J. G. Steele corrects this imbalance with a detailed account of the Indigenous people of the subtropical coast at the time of their earliest contact with white settlers. The region described is centred on Brisbane, extending along the coast to Fraser Island, to Evens Head in New South Wales, and inland to the Great Dividing Range. Drawing on early accounts, photographs, place-names, languages, legends, archeology, and museum collections, Aboriginal Pathways provides a wealth of fascinating and important material, much of it relevant to debates on Indigenous land rights and sacred sites of the 1980s.

Using Occupational Therapy Models in Practice-Merrill Turpin 2010-11 This book is a succinct and practical guide for students and practitioners applying occupational therapy models in the field. It provides an overview of the common models in practice and bridges the gap between theoretical texts on conceptual models and the immediate demands of practice. It describes occupational therapists' use of models within the realities of practice in a variety of contexts and takes the approach that practice models can be used as tools to guide clinical reasoning. Single page of clinical reasoning for each model provides aide memoire for undergraduate study and students on clinical placements. Analysis of 6 case studies from perspective of each model with a grid demonstrating the model's application for each case study at the end of each chapter illustrates use of models within a practice context. Description of historical and cultural context of each model's development enhance students' understanding. Examples of where models have been used inappropriately and the consequences of this and how it might relate to clinical reasoning aid understanding. Grid at end of book summarising the application of each model for each case study allows students to compare and contrast the efficacy of each model in different contexts.
