Writing Information Security Policies-Scott Barman 2002 Administrators, more technically savvy than their managers, have started to secure the networks in a way they see as appropriate. When management catches up to the notion that security is important, system administrators have already altered the goals and business practices. Although they may be grateful to these people for keeping the network secure, their efforts do not account for all assets and business requirements Finally, someone decides it is time to write a security policy. Management is told of the necessity of the policy document, and they support its development. A manager or administrator is assigned to the task and told to come up with something, and fast! Once security policies are written, they must be treated as living documents. As technology and business requirements change, the policy must be updated to reflect the new environment--at least one review per year. Additionally, policies must include provisions for security awareness and enforcement while not impeding corporate goals. This book serves as a guide to writing and maintaining these all-important security policies.

The Economics of Ecosystems and Biodiversity in National and International Policy Making-Patrick ten Brink 2011 The Economics of Ecosystems and Biodiversity (TEEB) study is a major international initiative to draw attention to the global economic benefits of biodiversity, to highlight the growing costs of biodiversity loss and ecosystem degradation, the benefits of investing in natural capital, and to draw together expertise from the fields of science, economics and policy to enable practical actions. Drawing on a team of more than one hundred authors and reviewers, this book demonstrates the value of ecosystems and biodiversity to the economy, society and individuals, highlights the urgency for strategic policy making and action at national and international levels, and presents examples of policies in action from around the world.It highlights the need for new public policy to reflect the appreciation that public goods and social benefits are often overlooked by a 'maximise private benefit' approach. It explores the range of instruments to reward those offering ecosystem service benefits, to reduce the incentives of those running down our natural capital, and to offer subsidies that respond to future priorities.The authors also consider two major areas of investment in natural capital - protected areas and investment in restoration. Overall the book demonstrates how we can take into account the value of ecosystems and biodiversity in policy decisions - at national and international levels - to promote the protection of our environment.

Building Internet Firewalls-Elizabeth D. Zwicky 2000-06-26 In the five years since the first edition of this classic book was published, Internet use has exploded. The commercial world has rushed headlong into doing business on the Web, often without integrating sound security technologies and policies into their products and methods. The security risks--and the need to protect both business and personal data--have never been greater. We've updated Building Internet Firewalls to address these newer risks. What kinds of security threats does the Internet pose? Some, like password attacks and the exploiting of known security holes, have been around since the early days of networking. And others, like the distributed denial of service attacks that crippled Yahoo, E-Bay, and other major e-commerce sites in early 2000, are in current headlines. Firewalls, critical components of today's computer networks, effectively protect a system from most Internet security threats. They keep damage on one part of the network--such as eavesdropping, a worm program, or file damage--from spreading to the rest of the network. Without firewalls, network security problems can rage out of control, dragging more and more systems down. Like the bestselling and highly respected first edition, Building Internet Firewalls, 2nd Edition, is a practical and detailed step-by-step guide to designing and installing firewalls and configuring Internet services to work with a firewall. Much expanded to include Linux and Windows coverage, the second edition describes: Firewall technologies: packet filtering, proxying, network address translation, virtual private networks Architectures such as screening routers, dual-homed hosts, screened hosts, screened subnets, perimeter networks, internal firewalls Issues involved in a variety of new Internet services and protocols through a firewall Email and News Web services and scripting languages (e.g., HTTP, Java, JavaScript, ActiveX, RealAudio, RealVideo) File transfer and sharing services such as NFS, Samba Remote access services such as Telnet, the BSD "r" commands, SSH, BackOrifice 2000 Real-time conferencing services such as ICQ and talk Naming and directory services (e.g., DNS, NetBT, the Windows Browser) Authentication and auditing services (e.g., PAM, Kerberos, RADIUS); Administrative services (e.g., syslog, SNMP, SMS, RIP and other routing protocols, and ping and other network diagnostics) Intermediary protocols (e.g., RPC, SMB, CORBA, IIOP) Database protocols (e.g., ODBC, JDBC, and protocols for Oracle, Sybase, and Microsoft SQL Server) The book's complete list of resources includes the location of many publicly available firewall construction tools.

How to Write a Dissertation-Benjamin Baisai Silas Madondo 2013-08-19 A retired extensionist after thirty four years of public extension service. He was formerly trained at Chibero college of agriculture.He served in three provinces as head in three provinces of Mashonaland and midlands respectively..Some of the highlights of his carreer include taking women into extension as extension workers at field levels.He also engaged black officers to work in European areas as advisers; a new dimension that was unique. Discrimination on the use of public utilities was abolished during his time. Black and white officer operation was integrated into one service. Extension as a discipline offered interesting challenges to the discipline. It was transformed into an academic discipline from one that had confined workers to the sole use of the hoe to the one that was upgraded to the use of a pen and paper backed by officers who used the motor bike to a four wheeled vehicle. After retiring from public service he joined the Zimbabwe Open University as Senior lecturer-a post he holds currently. Benjamin owns a commercial farm of 190 hectars where he raises beef cattle and grows crops under normal conditions. He holds a master's degree and is

working for DPHIL programme with the Zimbabwe Open University. Benjamin is married with one wife and has one son and daughter who are mature. He has three grand children.

The National Planning Policy Framework-Great Britain: Parliament: House of Commons: Communities and Local Government Committee 2011-12-21 This report recommends that a default answer of 'yes' to development should be removed from the National Planning Policy Framework (NPFF). The phrase 'significantly and demonstrably' must also be removed from the presumption that all planning applications should be approved unless the adverse effects 'significantly and demonstrably' outweigh the benefits, because it adds a further barrier to the achievement of truly sustainable development. The definition of 'sustainable development' is inadequate and often conflated with 'sustainable economic growth'. The framework gives the impression that greater emphasis should be given in planning decisions to economic growth, undermining the equally important environmental and social elements of the planning system. The NPPF should require local planning decisions to be taken in accordance with the presumption in favour of sustainable development consistent with Local Plans. It is unacceptable that so many parts of England have yet to develop and adopt a new Local Plan. Clarity within the NPPF has suffered in the pursuit of brevity. Inconsistent drafting could create gaps in planning policy or guidance that could lead to a huge expansion in the size of Local Plans - as local authorities attempt to plug those gaps. The test for 'viability', as currently worded, risks allowing unsustainable developments to go ahead if measures to make them sustainable are deemed to make them unviable for the developer. MPs also call for a sensible transition period to give local authorities time to put Local Plans in place where they have not already done so.

Bureaucracy and the Policy Process-Dennis D. Riley 2006 The central role that bureaucracy plays in the policy process is played by individuals, namely, by subject matter experts and managers we call political executives. The context in which these executives play their roles is defined by three key forces—the organizational environment of bureaucracy itself; our governing philosophy stressing responsiveness, respect for individual rights, and accountability; and the demands of the people and the institutions those people have created to govern themselves. This book provides an in-depth look at each of these forces,

with chapters specifically devoted to how bureaucrats interpret their role in the policy process, how the organizational environment influences their ability to play that role, and most of all, to the interactions between bureaucrats and the institutions of what we call the Constitutional government—the President, the Congress, and the Courts.

Ethics in Public Health and Health Policy-Daniel Strech 2013-05-15 Ethical issues associated with public health and health policy--related, for example, to pandemic plans and vaccination policies (c.f. SARS or pandemic influenza), preventive measures like screening (e.g. for breast cancer or dementia) or health information campaigns, social inequalities or health care rationing--are increasing in worldwide importance. Evidence-based information for valid benefit-harm assessment is often rare and hard to get for participants in public health interventions. Program implementation often disregards requirements of fair decision-making processes (like public participation, transparency, etc.). Originating from an international conference (based on a call for abstracts and external review), this volume contains contributions from a group of experts from multiple disciplines and countries. It covers (i) conceptual foundations of public health ethics, (ii) methodological approaches and (iii) normative analyses of specific issues and cases. Bridging theoretical foundations with practical applications, this volume provides a valuable resource for researchers, practitioners and students concerned with public health practice and policy.
