The birds fell from the sky and splattered to the ground in heaps of blood and bone. Clouds emerged and darkened a midnight blue where only the moon glimmered in the starless sky. Without focusing specifically on pollution, it also discusses ways in which these systems respond to perturbations, either those that are natural or those that are caused by humans. Background material from subjects such as atmospheric science, limnology, and soil science is provided in order to establish a setting for a description of the relevant chemistry. Emphasis is on general principles that can be applied in a variety of circumstances. At the same time, these principles are illustrated with examples taken from around the world.
