Ophthalmology In Focus-Jack J. Kanski 2014-12-10 In Focus Ophthalmology is aimed at all medical and health science students who require an introductory, low cost and highly illustrated guide to this specialty. The material is presented in double page spreads. The left-hand page has a synoptic and highly structured text (normally under the following headings: incidence; clinical features; differential diagnosis; management; prognosis). The right-hand page has a selection of four to six clinical photographs. Ophthalmology In Focus is a convenient pocket size and therefore ideal for quick preparation before ward rounds. Each volume also includes self-assessment material, which is extremely helpful for preparation for examinations. Because of shorter hospital stays and more outpatient treatment, students are less likely to be able to see the full range of conditions on the ward - the books in this series help supply that deficit. Invaluable source of clinical photographs - students are now less able to be have the opportunity to see - in real life - the full range of conditions that they are expected to know about and that they may be tested on Synoptic structured text - ideal for quick preparation before ward rounds Includes self-assessment material - picture tests - handy for revision, especially for the all-important 'OSCE' New series name: In Focus New series design Test revised to include more on management Picture tests included in each volume for first time

Ophthalmology-Mark Battersby 2009 This is a new edition of an innovative and popular introduction to ophthalmology, which in its first edition was awarded the Asher Prize in the Royal Society of Medicine Book Awards. After an introduction to the anatomy of the eye and its examination, the major diseases of the eye and their management are described, followed by a problem-based introduction to clinical decision making. For this third edition, the book has been revised to take account of the many advances in this specialty including the use of monoclonal antibodies in the treatment of 'wet' age-related macular degeneration and new surgical techniques for corneal transplants. Presents the core knowledge of ophthalmology and disorders of the eye, with a wealth of friendly features and superb illustrations. Relates structure to function in accordance with the approach that most of today's courses take. Tackles the common difficulties of diagnosis and management, such as acute red eye, sudden vision loss, and spots before the eyes, in the clinical decision-making section. Thoroughly updated to reflect current clinical practice. Additional material on macular degeneration. New and replacement images to reflect use of new imaging modalities.

Retinal Detachment-Jack J. Kanski 1994 Aims to give the trainee ophthalmologist an overview of the diagnosis and management of retinal detachment. The many advances in vitreoretinal surgery have led to a complete revision, and much new material, particularly in the treatment of complex retinal detachments by vitrectomy, has been added.
