Retail Is...-Dustin Kaehr 2016-05-01 We live in a remarkable time for retailing. Online shopping, social media, smartphones, data analytics, and dozens of other advancements make being a retailer today more exciting than in any other time in history. People will always have things to sell. People will always have things to buy. Commerce will never go away. What will go away are those who have something to sell but who don't adapt, evolve, or change. A merchant is someone who simply sells something. A retailer is someone who understands human behavior, financial principles, and a dozen other things, then takes all that understanding to create a superb experience for customers. This book will encourage you, challenge you, and remind you how much fun retailing can be!

Plant Molecular Biology Manual-Stanton Gelvin 2012-12-06 Five years ago, the first edition of the Plant Molecular Biology Manual appeared. At that time, the editors felt that the field of plant molecular biology had matured to a point that the publication of a series of protocols in plant molecular biology was warranted. During the past five years, the field of plant molecular biology has expanded rapidly. This expansion is, among other things, reflected by the presence of several journals in the plant sciences, as well as by the increasing amount of plant sciences articles that are published in the more general journals. In 1991 approximately 3000 people attended the Third International Congress of Plant Molecular Biology in Tucson, Arizona, where more than 2000 posters were presented. It is also remarkable to see that nowadays botanical and physiological meetings pay a considerable amount of attention to plant molecular biology. Since the first edition of this manual appeared, we have published, yearly, a series of supplements to the original volume. These supplements covered new subjects and described new methods that had been developed. With time, however, the editors realized that the original manual plus supplements had become cumbersome to use, and we decided to publish a reorganized version of the manual.

Drug Discovery-Robert A. Maxwell 2012-12-06 This treatise had its origins in the authors' strong opinion that the discovery of new drugs, especially of innovative therapeutic agents, really does not happen as a spontaneous sequel to investigative research, no matter how penetrating such research may be. Rather, it seemed to us that the discovery of innovative therapeutic agents was a very active process, existing in and of itself, and demanding full attention-it was not simply a passive, dependent by-process of investigative research. And yet, many researchers some close confreres of the authors, others more distant-believed otherwise. We felt that their view reflected unrealistic thinking and that reality probably lay closer to what Beyer" maintained: We are taught to believe that if we can understand a disease it should be easy enough to figure out, say, the molecular configuration of a definitive receptor mechanism somewhere along the line and to design a specific drug And so we start out to understand the disease but never get around to doing much about therapy. The authors very soon realized that there was essentially no quantitative information available on just where and how innovative therapeutic agents were discovered. There were only anecdotal accounts, and these were able to be selected and presented in ways that could be used to defend any point of view.

The Big Archive-Sven Spieker 2017-03-03 The archive as a crucible of twentieth-century modernism and key for understanding contemporary art. The typewriter, the card index, and the filing cabinet: these are technologies and modalities of the archive. To the bureaucrat, archives contain little more than garbage, paperwork no longer needed; to the historian, on the other hand, the archive's content stands as a quasi-objective correlative of the "living" past. Twentieth-century art made use of the archive in a variety of ways--from what Spieker calls Marcel Duchamp's "anemic archive" of readymades and El Lissitzky's Demonstration Rooms to the compilations of photographs made by such postwar artists as Susan Hiller and Gerhard Richter. In The Big Archive, Sven Spieker investigates the archive--as both bureaucratic institution and index of evolving attitudes toward contingent time in science and art--and finds it to be a crucible of twentieth-century modernism. Dadaists, constructivists, and Surrealists favored discontinuous, nonlinear archives that resisted hermeneutic reading and ordered presentation. Spieker argues that the use of archives by such contemporary artists as Hiller, Richter, Hans-Peter Feldmann, Walid Raad, and Boris Mikhailov responds to and continues this attack on the nineteenth-century archive and its objectification of the historical process. Spieker considers archivally driven art in relation to changing media technologies--the typewriter, the telephone, the telegraph, film. And he connects the archive to a particularly modern visuality, showing that the avant-garde used the archive as something of a laboratory for experimental inquiries into the nature of vision and its relation to time. The Big Archive offers us the first critical monograph on an overarching motif in twentieth-century art.

Wastewater Treatment in Constructed Wetlands with Horizontal Sub-Surface Flow-Jan Vymazal 2008-07-15 Wetlands have been used for uncontrolled wastewater disposal for centuries. However, the change in attitude towards wetlands during the 1950s and 1960s caused the minimization of the use of natural wetlands for wastewater treatment (at least in developed countries). Constructed wetlands have been used for wastewater treatment for about forty years.

Constructed wetland treatment systems are engineered systems that have been designed and constructed to utilize the natural processes for removal of

pollutants. They are designed to take advantage of many of the same processes that occur in natural wetlands, but do so within a more controlled environment. The aim of this book is to summarize the knowledge on horizontal surface flow constructed wetlands (HF CWs) and objectively evaluate their treatment efficiency under various conditions. The information on this type of wastewater treatment technology is scattered in many publications but a comprehensive summary based on world-wide experience has been lacking. The book provides an extensive overview of this treatment technology around the world, including examples from more than 50 countries and examples of various types of wastewater treated in HF CWs.

Asia-Pacific Conference on Science and Management of Coastal Environment-Yuk-Shan Wong 1997-11-30 Human beings have a long historical relationship with the coast. Initially it provided food and security, later forming important locations for industrial and commercial development. Now the emphasis has shifted towards leisure and conservation, although the former functions remain crucial. However, it is only very recently that people have started viewing the coast as a common and valuable resource that requires rational utilisation and scientific management in order to sustain its attractiveness. Of course, enlightened management comes only through understanding of the complicated coastal regions, which enables coastal managers to balance pressures from different sectors and to minimize risks. Scientific knowledge will continue to be the most important basis for resolving the conflicts between coastal users and interest groups such as developers and ecologists. Coastal management has also shifted from traditional restorative or remedial actions towards planned avoidance of other conflicts. Despite rapid advancement in coastal sciences over recent decades, most of the major coastal issues have remained outstanding in the agenda. Control of shoreline erosion and protecting sea level rise continue to be crucial problems facing coastal scientists. Destructive coastal storms still cause tremendous damage, particularly in low altitudes. Wetland and estuary reclamation have led to the loss of the most valuable estuary wetlands which are required to sustain biological productivity and biodiversity. This volume includes papers on marine and coastal pollution, eutrophication, aquaculture, conservation and utilization, coastal wetlands, and coastal zone management.

The Influence of Polymer Additives on Velocity and Temperature Fields-Bernhard Gampert 2012-12-06 The Symposium on "The Influence of Polymer Additives on Velocity and Temperature Fields" was proposed to the General Assembly of the International Union of Theoretical and Applied Mechanics (IUTAM) by the "Gesellschaft für Angewandte Mathematik und Mechanik" (GAMM). The Symposium was held under the auspices of IUTAM in association with the "Deutsche Rheologische Gesellschaft" (DRG) with responsibility for the organization lying with B. Gampert (Universität-GH-Essen). The main aim of this IUTAM Symposium was to consider the fundamental aspects of the phenomena that occur when small amounts of polymers are added to turbulent flows (turbulent drag reduction) and laminar porous media flows. In particular attention was devoted to - the influence of molecular parameters of the polymers and solution properties, especially the elongational viscosity, on turbulent flow and laminar porous media flow; the influence of polymers on the turbulence structure in polymer drag reduction.

Ion Channel Reconstitution-C. Miller 2013-11-09 It is now over 30 years since the idea of ion-conducting pores burst on the electrophysiological scene, 15 years since these were generally realized to be membrane-spanning proteins, and 10 years since the first observations of single ion channels from higher organisms were made. During the past 5 years, several integral membrane channel proteins have been purified in a functionally competent state: the nicotinic acetylcholine receptor, the Na⁺ channel, mitochondrial "VDAC," and a variety of porins. The stage is thus set to attack ion channels in the same ways that biochemists have been attacking enzymes for decades: isolation followed by functional analysis in as simple a system as possible, with a view towards understanding the molecular mechanisms of the protein's behavior and how this is related to the underlying molecular structure. This is always a daunting task, all the more so with ion channels because of our still primitive and scanty understanding of channel structures and because of the difficulty in isolating functionally active channel proteins. In this volume, which can be considered a biochemically slanted companion to Sakmann and Neher's *Single-Channel Recording*, I have tried to present a view of the current landscape of ion-channel reconstitution. These chapters illustrate not only the different approaches and techniques of the major practitioners of ion channel reconstitution but, as importantly, the varied motivations for doing this kind of work.
