Supply Chain Management Accounting-Simon Templar 2019-03-03 The need to contain costs across the business is as strong as ever and the search for cost reduction opportunities is intensifying. There still remains one last major opportunity to take out costs - through the supply chain. Ultimately all costs will make their way to the final marketplace to be reflected in the price paid by the end user. Smart companies instead seek to make the supply chain more competitive through the value it creates and the costs it reduces overall. They have realised that the real competition is not company against company but rather supply chain against supply chain. Supply Chain Management Accounting looks at how the evolution of supply chains has been dramatic over the last few years, with more and more companies moving to sourcing overseas, distributing finished goods to overseas markets, and increasing their international operations. The seeking of low-cost country sourcing, optimizing manufacturing, and exporting products and services has created new challenges to demand forecasting and supply chain planning.
