Packets with Deadlines-I-Hong Hou 2013-05-30 With the explosive increase in the number of mobile devices and applications, it is anticipated that wireless traffic will increase exponentially in the coming years. Moreover, future wireless networks all carry a wide variety of flows, such as video streaming, online gaming, and VoIP, which have various quality of service (QoS) requirements.

Therefore, a new mechanism that can provide satisfactory performance to the complete variety of all kinds of flows, in a coherent and unified framework, is needed. In this book, we introduce a framework for real-time wireless networks. This consists of a model that jointly addresses several practical concerns for real-time wireless networks, including per-packet delay bounds, throughput requirements, and heterogeneity of wireless channels. We detail how this framework can be employed to address a wide range of problems, including admission control, packet scheduling, and utility maximization. Table of Contents: Preface / Introduction / A Study of the Base Case / Admission Control / Scheduling Policies / Utility Maximization without Rate Adaptation / Utility Maximization with Rate Adaptation / Systems with Both Real-Time Flows and Non-Real-Time Flows / Broadcasting and Network Coding / Bibliography / Authors' Biographies

Automotive Technician Training: Theory-Tom Denton 2014-04-16 A
blended learning approach to automotive engineering at levels one
to three. Produced alongside the ATT online learning resources, this
textbook covers all the theory and technology sections that students
need to learn in order to pass levels 1, 2 and 3 automotive courses.
It is recommended by the Institute of the Motor Industry and is also
ideal for exams run by other awarding bodies. Unlike the current
textbooks on the market though, this title takes a blended learning
approach, using interactive features that make learning more
enjoyable as well as more effective. When linked with the ATT
online resources it provides a comprehensive package that includes
activities, video footage, assessments and further reading.

Information and activities are set out in sequence so as to meet
teacher and learner needs as well as qualification requirements.
Tom Denton is the leading UK automotive author with a teaching
career spanning lecturer to head of automotive engineering in a
large college. His nine automotive textbooks published since 1995
are bestsellers and led to his authoring of the Automotive
Technician Training multimedia system that is in common use in the
UK, USA and several other countries.

Preserving New York-Anthony Wood 2013-10-28 Preserving New
York is the largely unknown inspiring story of the origins of New
York City's nationally acclaimed landmarks law. The decades of
struggle behind the law, its intellectual origins, the men and women
who fought for it, the forces that shaped it, and the buildings lost
and saved on the way to its ultimate passage, span from 1913 to
1965. Intended for the interested public as well as students of New

York City history, architecture, and preservation itself, over 100 illustrations help reveal a history richer and more complex than the accepted myth that the landmarks law sprang from the wreckage of the great Pennsylvania Station. Images include those by noted historic photographers as well as those from newspaper accounts of the time. Forgotten civic leaders such as Albert S. Bard and lost buildings including the Brokaw Mansions, are unveiled in an extensively researched narrative bringing this essential episode in New York's history to future generations tasked with protecting the city's landmarks. For the first time, the story of how New York won the right to protect its treasured buildings, neighborhoods and special places is brought together to enjoy, inform, and inspire all who love New York.
