Enriching Production-Åke Sandberg 1995 This text aims to present and discuss the innovative Volvo Uddevalla plant, comparing it to other plants - Japanese lean ones and others. The starting point for the book is Volvo's dramatic decision to close its Uddevalla and Kalmar plants, and the debate that followed this decision, both in Sweden and abroad. Both plants were pioneers of the possibilities to unite productivity and the good work, but, following the announcement of their closure, researchers and practitioners in the field of industrial organization from many countries asked why they closed, how they compared with other production concepts, and whether we now see an end of an alternative to Japanese lean production.

Engineering of Sport 6-Eckehard Moritz 2010-05-10 This proceedings volume of the ISEA 2006 examines sports engineering, an interdisciplinary subject which encompasses and integrates not only sports science and engineering but also biomechanics, physiology and anatomy, and motion physics. This is the first title of its kind in the emerging field of sports technology.

Identification for Automotive Systems-Daniel Alberer 2011-12-09 Increasing complexity and performance and reliability expectations make modeling of automotive system both more difficult and more urgent. Automotive control has slowly evolved from an add-on to classical engine and vehicle design to a key technology to enforce consumption, pollution and safety limits. Modeling, however, is still mainly based on classical methods, even though much progress has been done in the identification community to speed it up and improve it. This book, the product of a workshop of representatives of different communities, offers an insight on how to close the gap and exploit this progress for the next generations of vehicles.

Microelectronic Interconnections and Assembly-G.G. Harman 2012-12-06 MICROELECTRONIC INTERCONNECTIONS AND MICROASSEMBLY WORKSHOP

18-21 May 1996, Prague, Czech Republic Conference Organizers: George Harman, NIST (USA) and Pavel Mach (Czech Republic) Summary of the Technical Program Thirty two presentations were given in eight technical sessions at the Workshop. A list of these sessions and their chairpersons is attached below. The Workshop was devoted to the technical aspects of advanced interconnections and microassembly, but also included papers on the education issues required to prepare students to work in these areas. In addition to new technical developments, several papers presented overviews predicting the future directions of these technologies. The basic issue is that electronic systems will continue to be miniaturized and at the same time performance must continue to improve. Various industry roadmaps were discussed as well as new smaller packaging and interconnection concepts. The newest chip packages are often based on the selection of an appropriate interconnection method. An example is the chip-scale package, which has horizontal (x-y) dimensions,;; 20% larger than the actual silicon chip itself. The chip is often flip-chip connected to a micro ball-grid-array, but direct chip attach was described also. Several papers described advances in the manufacture of such packages.

The Scientific Basis of Integrative Medicine, Second Edition-Leonard A. Wisneski 2009-06-25 Since the first suffering supplicant offered a prayer to his god or the first mother cradled an ailing child in her caring arms, we have witnessed how human health and healing goes beyond any inventory of parts and infusion of chemicals. We humans are a complex melding of thought, emotion, spirit, and energy and each of those components is as critical to our well-being as our physiological status. Even if we are just beginning to quantify and document these seemingly intangible aspects, to ignore them in the practice of medicine is neglect and an invitation to do harm. Now in its second edition, The Scientific Basis of Integrative Medicine continues to provide doctors and other health practitioners with information on complementary and alternative approaches to health, that is authoritative, scientifically based, and epidemiologically substantiated. Written for doctors and healthcare professionals by pioneering practitioners and updated with the newest research across an increasing range of possibilities, the new edition of this bestselling work - Establishes the scientific basis for the mind-body connection and then documents the puissant interactions of the endocrine, immune, nervous, and stress systems that so profoundly influence our lives Examines that healing dimension of spirituality, which informs but transcends the five senses Investigates how hope, faith, and love aid healing Discusses how the emotional presence of a practitioner affects patient outcome Considers the incorporation of a unified theory that can account for the existence of health enhancing energy fields within — as well as outside — the human body Integral physiology serves as a bridge between Western medical knowledge and the equally valuable, but less well-recognized, Eastern systems of medicine. The authors refer to it as integrative because it combines important Western biological knowledge with forms of healing that incorporate the mental and emotional, and spiritual aspects that are essential to health, because those aspects are what make us essentially human.

This book is open access under a CC BY license.

Getting to Zero Alcohol-Impaired Driving Fatalities-National Academies of Sciences, Engineering, and Medicine 2018-05-25 Alcohol-impaired driving is an important health and social issue as it remains a major risk to Americans' health today, surpassing deaths per year of certain cancers, HIV/AIDS, and drownings, among others, and contributing to long-term disabilities from head and spinal injuries. Progress has been made over the past decades towards reducing these trends, but that progress has been incremental and has stagnated more recently. Getting to Zero Alcohol-Impaired Driving Fatalities examines which interventions (programs, systems, and policies) are most promising to prevent injuries and death from alcohol-impaired driving, the barriers to action and approaches to overcome them, and which interventions need to be changed or adopted. This report makes broad-reaching recommendations that will serve as a blueprint for the nation to accelerate the progress in reducing alcohol-impaired driving fatalities.
