Soul Survivor-Andrea Leininger 2009-08-03 James Leininger was just two years old when he began having disturbing nightmares that would not stop. He screamed out in the night: 'Plane on fire! Little man can't get out!' While nightmares are common among children, what happened next shocked those around him... James began to reveal details of planes and war tragedies that no two-year-old boy could know. His desperate parents were at a loss to help him until he said three things: 'Corsair', 'Natoma' and 'Jack Larsen'. From these tantalising clues, James's parents travelled thousands of miles and spent many long years piecing together these facts to try and find an answer that could end his torment. Finally, despite his mother's fears and his father's staunch Christian beliefs, they found only one possibility to the endless coincidences that surrounded every detail in James's life - that their son was reliving the past life of a World War II fighter pilot. Their touching story is one that will challenge sceptics and confirm the beliefs of those who already believe in life after death.

Corporate Fraud and Corruption-M. Krambia-Kapardis 2016-04-08

Recent large-scale corporate collapses, such as Lehman Brothers, Enron, Worldcom, and Parmalat, highlight the implosion of traditional models of fraud prevention. By focusing on risk factors at the micro level, they have failed to take into account the broader context in which external auditors operate as well as the crucial importance of such factors as corruption, organizational culture, corporate social responsibility, ethical values, governance, ineffective regulation, and a lack of transparency. Corporate Fraud and Corruption engages readers by showing how evidence-based, multi-level micro and macro analysis of fraud risk and protective factors inform effective fraud prevention, in turn minimizing financial catastrophes. Krambia-Kapardis focuses on her own empirical research into the aetiology of fraud to showcase a holistic approach to fraud prevention. This book also features major case studies from the United States, the United Kingdom, and Australia.

Clinical Companion: Managing the Most Common Orthopaedic Conditions, is that book. To date, the competition has been bulky textbooks that are comprehensive but far too big to carry on rotations. Small in size, but comprehensive in content, it will contain everything the student needs to diagnose and treat the most commonly-seen conditions. With introductory chapters to prep students for treating patients, the book will progress to four Sections covering the conditions: The Upper Quadrant, The Lower Quadrant, The Spine, and Systemic Conditions. We will also make videos available to users of the book via the Dutton Orthopaedics OLC. Key Selling Features Case studies at the end of each section to enhance the decision-making process for students Q&A will test student's ability to determine the stage of healing, decide the best course of treatment, and evaluate results throughout the patient's care. "Major areas in orthopedics including anatomy, kinesiology, and biomechanics of movement are covered, along with a healthy dose of pathology that impacts patient function. Clinical pearls appear in highlighted boxes throughout, and camera icons indicate where video clips should be viewed. This second edition is more comprehensive than the first. Overall, this is a valuable reference that achieves a nice balance between detailing examination and treatment. Other books tend to be limited to addressing only one of these areas, but not both. This combination makes the book unique." -- Doody's

Narrative Psychiatry-Bradley Lewis 2011-03-01 Psychiatry has lagged behind many clinical specialties in recognizing the importance of narrative for understanding and effectively treating disease. With this book, Bradley Lewis makes the challenging and compelling case that psychiatrists need to promote the significance of narrative in their practice as well. Narrative already holds a prominent place in psychiatry. Patient stories are the foundation for diagnosis and the key to managing treatment and measuring its effectiveness. Even so, psychiatry has paid scant scholarly attention to the intrinsic value of patient stories. Fortunately, the study of narrative outside psychiatry has grown exponentially in recent years, and it is now possible for psychiatry to make considerable advances in its appreciation of clinical stories. Narrative Psychiatry picks up this intellectual opportunity and develops the tools of narrative for psychiatry. Lewis explores the rise of narrative medicine and looks closely at recent narrative approaches to psychotherapy. He uses philosophic and fictional writings, such as Anton Chekhov's play *Ivanov*, to develop key terms in narrative theory (plot, metaphor, character, point of view) and to understand the interpretive dimensions of clinical work. Finally, Lewis brings this material back to psychiatric practice, showing how narrative insights can be applied in psychiatric treatments—including the use of psychiatric medications. Nothing short of a call to rework the psychiatric profession, Narrative Psychiatry advocates taking the inherently narrative-centered patient-psychiatrist relationship to its logical conclusion: making the story a central aspect of treatment.

Atomic Physics 4-G. Putlitz 2012-12-06 ATOMIC PHYSICS 4 extends the series of books containing the invited papers presented at each "International Conference on Atomic Physics." FICAP, the fourth conference of this type since its foundation in 1968, was held at the University of Heidelberg. The goal of these conferences, to cover the field of atomic physics with all its different branches, to review the present status of research, to revive the fundamental basis of atomic physics and to emphasize future developments of this field as well as its applications was met by more than thirty invited speakers, leaders in the field of atomic physics. Their talks were supplemented by more than two hundred contributed papers contained in the FICAP Book of Abstracts. This volume begins with papers given in honour and memory of E. U. Condon, to whom this conference was dedicated. It continues with articles on fundamental interactions in atoms and Quantum electrodynamics, on the fast progressing field of high energy heavy ion collisions and Quasi-molecules, on electronic and atomic collisions and the structure of electronic and \sim -mesic atoms. The volume closes with contributions concerning the application of lasers in atomic physics, a new field of vastly increasing importance to fundamental experiments as well as applications. We feel that this book contains a very stimulating account of the present main streams of research in atomic physics and its possible future directions.
