Rebellious Mourning-Cindy Milstein 2017-09-12 "This intimate, moving, and timely collection of essays points the way to a world in which the burden of grief is shared, and pain is reconfigured into a powerful force for social change and collective healing." —Astra Taylor, author The People's Platform "A primary message here is that from tears comes the resolve for the struggle ahead." —Ron Jacobs, author of Daydream Sunset "Rebellious Mourning uncovers the destruction of life that capitalist development leaves in its trail. But it is also witness to the power of grief as a catalyst to collective resistance." —Silvia Federici, author of Caliban and the Witch We can bear almost anything when it is worked through collectively. Grief is generally thought of as something personal and insular, but when we publicly share loss and pain, we lessen the power of the forces that debilitate us, while at the same time building the humane social practices that alleviate suffering and improve quality of life for everyone. Addressing tragedies from Fukushima to Palestine, incarceration to eviction, AIDS crises to border crossings, and racism to rape, the intimate yet tenacious writing in this volume shows that mourning can pry open spaces of contestation and reconstruction, empathy and solidarity. With contributions from Claudia Rankine, Sarah Schulman, David Wojnarowicz, Leanne Betasamosake Simpson, David Gilbert, and nineteen others. Cindy Milstein is the author of Anarchism and Its Aspirations, co-author of Paths toward Utopia: Graphic Explorations of Everyday Anarchism, and editor of the anthology Taking Sides: Revolutionary Solidarity and the Poverty of Liberalism.

Strategic Alliances in the High-tech Industry-Krzysztof Klincewicz 2005 The book discusses the underlying logic of the high-tech industry, arguing that recent technological and strategic developments made interorganizational alliances inevitable. In the last 15 years, strategic alliances became the main driving force for the industry development and nowadays, one cannot think of "stand-alone" strategies and complete independence, due to the proliferation of technology standards, long- or short-term linkages, and the complementary nature of advanced products. The book offers a comprehensive review of existing literature, concerning strategic alliances, management of technology and high-tech markets. It further proposes the model of high-tech value chain, resulting from the nature of new technologies, but constituting the industry structure and impacting businesses of all high-tech companies. A company's technological strategy or domestic industry's policy is directly linked to its assumed role in the globalized value chain: chain leader, complementor and contractor. The book analyzes these three generic partnership strategies, using examples of NTT DoCoMo, Microsoft, Taiwanese electronics manufacturers, Indian offshore software developers and the open source movement, and multiple documentary sources, not widely available to international readers. Managers of high-tech companies will benefit from the book's recommendations, helping them define corporate strategies. The integrated partnership model suggests when, how and with whom to ally in order to stimulate innovation and diffusion of their products and services. The discussed generic strategies include options for market penetration without substantial financial investments, opening doors to young start-up companies and showing them how to gradually grow their businesses. Plural governance model and portfolio of incentives and deterrents help in turn established firms align strategies of their partners and boost the innovativeness of own technology platforms. Krzysztof Klincewicz is lecturer at the School of Management, Warsaw University and visiting researcher at the School of Innovation Management, Tokyo Institute of Technology. His research interests combine strategic management, organization theory, social sciences and new technologies, with particular focus on strategies of advanced technology companies. The present book is an outcome of a two years research program, financed by the government of Japan, concerning the role of interorganizational linkages and technology alliances in strategies of high-tech companies. Dr Klincewicz is certified chartered marketer of the British Chartered Institute of Marketing, and has numerous years of working experience in business development management for IT companies in Poland, Finland and in the UK. He has authored many academic articles, conference papers, and two management science books: *g?qqKnowledge management. Development, diffusion and rejection g?qq* (Wydawnictwo WZ UW 2004) and the recently published *g?qqManagement fashions. Turning bestselling ideas into objects and institutions g?qq* (Transaction Publishers 2005).

Research in the Wild-Yvonne Rogers 2017-04-04 The phrase "in-the-wild" is becoming popular again in the field of human-computer interaction (HCI), describing approaches to HCI research and accounts of user experience phenomena that differ from those derived from other lab-based methods. The phrase first came to the forefront 20-25 years ago when anthropologists Jean Lave (1988), Lucy Suchman (1987), and Ed Hutchins (1995) began writing about cognition being in-the-wild. Today, it is used more broadly to refer to research that seeks to understand new technology interventions in everyday living. A reason for its resurgence in contemporary HCI is an acknowledgment that so much technology is now embedded and used in our everyday lives. Researchers have begun following suit—decamping from their usability and living labs and moving into the wild; carrying out in-situ development and engagement, sampling experiences, and probing people in their homes and on the streets. The aim of this book is to examine what this new direction entails and what it means for HCI theory, practice, and design. The focus is on the insights, demands and concerns. But how does research in the wild differ from the other applied approaches in interaction design, such as contextual design, action research, or ethnography? What is added by labeling user research as being in-the-wild? One main difference is where the research starts and ends: unlike user-centered, and more specifically, ethnographic approaches which typically begin by observing existing practices and then suggesting general design implications or system requirements, in-the-wild approaches create and evaluate new technologies and experiences in situ (Rogers, 2012). Moreover, novel technologies are often developed to augment people, places, and settings, without necessarily designing them for specific user needs. There has also been a shift in design thinking. Instead of developing solutions that fit in with existing practices, researchers are experimenting with new technological possibilities that can change and even disrupt behavior. Opportunities are created, interventions installed, and different ways of behaving are encouraged. A key concern is how people react, change and integrate these in their everyday lives. This book outlines the emergence and development of research in the wild. It is structured around a framework for conceptualizing and bringing together the different strands. It covers approaches, methods, case studies, and outcomes. Finally, it notes that there is more in the wild research in HCI than usability and other kinds of user studies in HCI and what the implications of this are for the field.

Didactics of Smart Pedagogy-Linda Daniela 2018-11-27 The focus on smart education has become a new trend in the global educational field. Some countries have already developed smart education systems and there is increasing pressure coming from business and tech communities to continue this development. Simultaneously, there are only fragmented studies on the didactic aspects of technology usage. Thus, pedagogy as a science must engage in a new research direction—smart pedagogy. This book seeks to engage in a new research direction, that of smart pedagogy. It launches discussions on how to use all sorts of smart education solutions in the context of existing learning theories and on how to apply innovative solutions in order to reduce the marginalization of groups in educational contexts. It also explores transformations of pedagogical science, the role of the educator, applicable teaching methods, learning outcomes, and research and assessment of acquired knowledge in an effort to make the smart education process meaningful to a wide audience of international educators, researchers, and administrators working within and tangential to TEL.

Professional Issues in Forensic Science-Max M. Houck 2015-04-15 *Professional Issues in Forensic Science* will introduce students to various topics they will encounter within the field of Forensic Science. Legal implications within the field will focus on expert witness testimony and procedural rules defined by both legislative statute and court decisions. Turpen Time-Mike Turpen 2014-07-08 "You can't learn to swim by taking a correspondence course." One-liner s. Used by everyone from Winston Churchill to Rodney Dangerfield, they can be poetic, profound, or outrageously funny. A good one-liner may initially appear shallow or silly, but in fact packs a powerful message in deceptively few words. In "Turpen Time," Mike Turpen offers fifty shades of life in the form of short stories, each woven around a one-liner.

Entertaining and humorous, dead serious and sober, these stories offer lessons for living a good, happy life. In everything from nocturnal meetings in the White House with President Bill Clinton and Les Moonves, to a first kiss, somewhere between the swing set and the dog house, Mike will charm you with his high-energy approach to life, law, politics, and the pursuit of happiness. "Through both work and family, I've lived--and learned how to live--an extraordinary life. In our daily struggle for significance, it's imperative to realize that we are not perfect. A few mistakes are better than perfect inaction. Stories you'll read here have humbled me. I share them, knowing that we have all been humbled, chastened, and even embarrassed by our actions at various points in our lives. Often, such experiences teach us the best lessons. It reminds us that we can learn via the OPE method--other people's experiences--but that only goes so far. People can tell you about different swimmer's strokes and what to do when you get in water over your head, but ultimately, we all have to take the plunge ourselves. I did. We all do."

Planning for Community Resilience-Jaimie Hicks Masterson 2014-11-24 How can we plan and design stronger communities? From New Orleans to Galveston to the Jersey Shore, communities struck by natural disasters struggle to recover long after the first responders have left. Globally, the average annual number of natural disasters has more than doubled since 1980. These catastrophes are increasing in number as well as in magnitude, causing greater damage as we experience rising sea levels and other effects of climate change. Communities can reduce their vulnerability to disaster by becoming more resilient—to not only bounce back more readily from disasters but to grow stronger, more socially cohesive, and more environmentally responsible. To be truly resilient, disaster preparation and response must consider all populations in the community. By bringing together natural hazards planning and community planning to consider vulnerabilities, more resilient and equitable communities are achievable. In *Planning for Community Resilience* the authors describe an inclusive process for creating disaster-resilient communities. Based on their recovery work after Hurricane Ike in Galveston, Texas, they developed a process that relies on the Disaster Impacts Model. This handbook guides any community through the process of determining their level of hazard exposure, physical vulnerability, and social vulnerability with the goal of determining the best planning strategy. *Planning for Community Resilience* will be invaluable to professionals working to protect their community from disturbance, including city planners, elected officials, floodplain managers, natural hazard managers, planning commissioners, local business leaders, and citizen organizers.

Improving the Quality of Health Care for Mental and Substance-Use Conditions-Institute of Medicine 2006-03-29 Each year, more than 33 million Americans receive health care for mental or substance-use conditions, or both. Together, mental and substance-use illnesses are the leading cause of death and disability for women, the highest for men ages 15-44, and the second highest for all men. Effective treatments exist, but services are frequently fragmented and, as with general health care, there are barriers that prevent many from receiving these treatments as designed or at all. The consequences of this are serious—for these individuals and their families; their employers and the workforce; for the nation's economy; as well as the education, welfare, and justice systems. *Improving the Quality of Health Care for Mental and Substance-Use Conditions* examines the distinctive characteristics of health care for mental and substance-use conditions, including payment, benefit coverage, and regulatory issues, as well as health care organization and delivery issues. This new volume in the Quality Chasm series puts forth an agenda for improving the quality of this care based on this analysis. Patients and their families, primary health care providers, specialty mental health and substance-use treatment providers, health care organizations, health plans, purchasers of group health care, and all involved in health care for mental and substance-use conditions will benefit from this guide to achieving better care.

Long-Term Macroeconomic Effects of Climate Change: A Cross-Country Analysis-Matthew E. Kahn 2019-10-11 We study the long-term impact of climate change

on economic activity across countries, using a stochastic growth model where labor productivity is affected by country-specific climate variables—defined as deviations of temperature and precipitation from their historical norms. Using a panel data set of 174 countries over the years 1960 to 2014, we find that per-capita real output growth is adversely affected by persistent changes in the temperature above or below its historical norm, but we do not obtain any statistically significant effects for changes in precipitation. Our counterfactual analysis suggests that a persistent increase in average global temperature by 0.04°C per year, in the absence of mitigation policies, reduces world real GDP per capita by more than 7 percent by 2100. On the other hand, abiding by the Paris Agreement, thereby limiting the temperature increase to 0.01°C per annum, reduces the loss substantially to about 1 percent. These effects vary significantly across countries depending on the pace of temperature increases and variability of climate conditions. We also provide supplementary evidence using data on a sample of 48 U.S. states between 1963 and 2016, and show that climate change has a long-lasting adverse impact on real output in various states and economic sectors, and on labor productivity and employment.

Action Research and New Media-Greg Hearn 2009 Action research is now a well-documented and well-accepted research methodology. Moreover, it is especially appropriate in new media research, where innovation and change are continual, and where processes and outcomes are usually not predictable and often involve fuzzy and subjective human elements. This book offers a systematic, in-depth academic overview of the application of action research methods to the field of new media. In this space, it is the first publication of its kind in what is a new but rapidly growing field. The book is divided into two sections. Introducing the two key concepts, namely, new media and action research, the first section describes the underlying principles, processes, questions, methods and tools that are relevant to an action research approach to new media inquiry. This is followed by a deeper exploration of three advanced, innovative approaches to action research and new media: ethnographic, network, and anticipatory action research. The third and final section presents four case studies and their individual applications of action research in different new media contexts.

Twilight of American Sanity-Allen Frances, M.D. 2017-09-05 A landmark book, from “one of the world’s most prominent psychiatrists” (The Atlantic, June 2017): Eminent psychiatrist Allen Frances analyzes the national psyche, viewing the rise of Donald J. Trump as darkly symptomatic of a deeper societal distress. Equally challenging and profound, *Twilight of American Sanity* makes sense of our time and charts the way forward. It is comforting to see President Donald Trump as a crazy man, a one-off, an exception—not a reflection on us or our democracy. But in ways I never anticipated, his rise was absolutely predictable and a mirror on our soul. ... What does it say about us, that we elected someone so manifestly unfit and unprepared to determine mankind’s future? Trump is a symptom of a world in distress, not its sole cause. Blaming him for all our troubles misses the deeper, underlying societal sickness that made possible his unlikely ascent. Calling Trump crazy allows us to avoid confronting the craziness in our society—if we want to get sane, we must first gain insight about ourselves. Simply put: Trump isn’t crazy, but our society is. -from *TWILIGHT OF AMERICAN SANITY* More than three years in the making: the world’s leading expert on psychiatric diagnosis, past leader of the American Psychiatric Association’s DSM (“the bible of psychology”), and author of the influential international bestseller on the medicalization of ordinary life, *Saving Normal*, draws upon his vast experience to deliver a powerful critique of modern American society’s collective slide away from sanity and offers an urgently needed prescription for reclaiming our bearings. Widely cited in recent months as the man who quite literally wrote the diagnostic criteria for narcissism, Allen Frances, M.D., has been at the center of the debate surrounding President Trump’s mental state—quoted in Evan Osnos’s May 2017 *New Yorker* article (“How Trump Could Get Fired”) and publishing a much-shared opinion letter in the *New York Times* (“An Eminent Psychiatrist Demurs on Trump’s Mental State”). Frances argues that Trump is “bad not mad”—that the real question to wrestle with is how we as a country could have chosen him as our leader. To answer this, Frances looks deeply at the American past and present, in hope of *Twilight of American Sanity* is an essential work for understanding our national crisis.

Cultures and Disasters-Fred Krüger 2015-04-24 Why did the people of the Zambesi Delta affected by severe flooding return early to their homes or even choose to not evacuate? How is the forced resettlement of small-scale farmers living along the foothills of an active volcano on the Philippines impacting on their day-to-day livelihood routines? Making sense of such questions and observations is only possible by understanding how the decision-making of societies at risk is embedded in culture, and how intervention measures acknowledge, or neglect, cultural settings. The social construction of risk is being given increasing priority in understand how people experience and prioritize hazards in their own lives and how vulnerability can be reduced, and resilience increased, at a local level. *Culture and Disasters* adopts an interdisciplinary approach to explore this cultural dimension of disaster, with contributions from leading international experts within the field. Section I provides discussion of theoretical considerations and practical research to better understand the important of culture in hazards and disasters. Culture can be interpreted widely with many different perspectives; this enables us to critically consider the cultural boundedness of research itself, as well as the complexities of incorporating various interpretations into DRR. If culture is omitted, related issues of adaptation, coping, intervention, knowledge and power relations cannot be fully grasped. Section II explores what aspects of culture shape resilience? How have people operationalized culture in every day life to establish DRR practice? What constitutes a resilient culture and what role does culture play in a society’s decision making? It is natural for people to seek refuge in tried and trust methods of disaster mitigation, however, culture and belief systems are constantly evolving. How these coping strategies can be introduced into DRR therefore poses a challenging question. Finally, Section III examines the effectiveness of key scientific frameworks for understanding the role of culture in disaster risk reduction and management. DRR includes a range of norms and breaking these through an understanding of cultural will challenge established theoretical and empirical frameworks.

Halting State-Charles Stross 2007-10-02 “Halting State [is] a near-future story that is at once over-the-top and compellingly believable.” - Vernor Vinge, author of *Rainbows End* In the year 2018, Sergeant Sue Smith of the Edinburgh constabulary is called in on a special case. A daring bank robbery has taken place at Hayek Associates—a dot-com start-up company that’s just floated onto the London stock exchange. But this crime may be a bit beyond Smith’s expertise. The prime suspects are a band of marauding orcs with a dragon in tow for fire support. The bank is located within the virtual reality land of Avalon Four, and the robbery was supposed to be impossible. When word gets out, Hayek Associates and all its virtual “economies” are going to crash hard. For Smith, the investigation seems pointless. But the deeper she digs, the bigger the case gets. There are powerful players—both real and pixelated—who are watching her every move. Because there is far more at stake than just some game-head’s fantasy financial security...

Usability Testing and Research-Carol M. Barnum 2002 Built on a solid foundation of current research in the field, *Usability Testing and Research* provides a comprehensive, up-to-date perspective in this increasingly important area of technical communication. Based on the most current research in the field, this book reflects the most recent developments and studies on this topic available. Sidebars throughout the book catch the attention of the readers and highlight key concepts in the text.
