It is assumed that the modern human centered computing requires the intensive application of these methods as well as effective integration with multiple techniques of computational collective intelligence. The book is organized in four parts devoted to the presentation of utilization of knowledge processing in agent and multiagent systems, application of computational collective intelligence to knowledge management, models for collectives of intelligent agents, and models and environments tailored directly to human-centered computing. All chapters in the book discuss theoretical and practical issues related to various models and aspects of computational techniques for semantic methods, which are currently studied and developed in many academic and industry centers over the world. The editors hope that the book can be useful for graduate and PhD students of computer science, as well as for mature academics, researchers and practitioners interested in developing of modern methods for representation, processing and distribution of knowledge in the context of human centered computing and by means of computer based information systems. It is the hope of the editors that readers of this volume can find in all chosen chapters many inspiring ideas and influential practical examples, as well as use them in their current and future work.

SAS Encoding-Manfred Kiefer 2012 Understanding the basic concepts of character encoding is necessary for creating, manipulating, and rendering any kind of character data. Whenever data is brought into SAS from various external sources; whenever it is transferred between SAS applications running different locales or across the network via thin clients; and when output is written to external files, SAS data sets, printers, or Web pages, an encoding is involved. In each of these cases something can go wrong. It is the user's responsibility to ensure that the data is stored, processed, and rendered in the correct encoding. Manfred Kiefer's "SAS Encoding: Understanding the Details" explains the basic concepts of characters, encodings, glyphs, and fonts and gives practical examples for how to troubleshoot encoding problems. Addressed to the beginner as well as to the advanced SAS user, "SAS Encoding: Understanding the Details" helps solve readers' encoding problems. It provides background information on encodings, shows how they are used with SAS software, and explains typical problems and ways to sort those out. It also presents examples on how to set up SAS software in an international environment.

Health 4.0: How Virtualization and Big Data are Revolutionizing Healthcare-Christoph Thuemmler 2017-01-07 This book describes how the creation of new digital services—through vertical and horizontal integration of data coming from sensors on top of existing legacy systems—that has already had a major impact

on industry is now extending to healthcare. The book describes the fourth industrial revolution (i.e. Health 4.0), which is based on virtualization and service aggregation. It shows how sensors, embedded systems, and cyber-physical systems are fundamentally changing the way industrial processes work, their business models, and how we consume, while also affecting the health and care domains. Chapters describe the technology behind the shift of point of care to point of need and away from hospitals and institutions; how care will be delivered virtually outside hospitals; that services will be tailored to individuals rather than being designed as statistical averages; that data analytics will be used to help patients to manage their chronic conditions with help of smart devices; and that pharmaceuticals will be interactive to help prevent adverse reactions. The topics presented will have an impact on a variety of healthcare stakeholders in a continuously global and hyper-connected world. · Presents explanations of emerging topics as they relate to e-health, such as Industry 4.0, Precision Medicine, Mobile Health, 5G, Big Data, and Cyber-physical systems; · Provides overviews of technologies in addition to possible application scenarios and market conditions; · Features comprehensive demographic and statistic coverage of Health 4.0 presented in a graphical manner.

The book also includes specialities like Moar Kuzhambu, Mysore Rasam, Pongal, Murukku and Jangiri, as well as pachadis and pickles. A must-have for all those who enjoy traditional Indian cuisine.

Genetics, Evolution and Radiation-Victoria L. Korogodina 2017-03-28 This book is dedicated to the great scientist and outstanding individual Nikolay Wladimirovich Timofeeff-Ressovsky. The book brings together a number of brief stories/essays about Timofeeff-Ressovsky including "Stories told by himself", and scientific chapters addressing his major research areas: genetics, radiobiology, radiation ecology and epidemiology, and evolution. Timofeeff-Ressovsky contributed to several fields of biology and established new directions of scientific research. He often repeated the phrase, which would later become famous: "Science should not be approached with the ferocity of wild animals". In keeping with that philosophy, the issues discussed here are still open. Each scientific part starts with a current review; the chapters present leading scientific schools and views. The main theme discussed in the genetics part is mutation variability in the context of linear (replication, transcription, translation) and conformational template processes, and its dependence on phylogenetic group. In turn, the radiobiology chapters focus on the reorganization of DNA, cell, and population variability under low-dose irradiation, sparking indirect processes and adaptive response. The radiation ecology and epidemiology parts present data on the consequences of nuclear plants and related accidents for ecological systems and human beings. Here some approaches to estimating radiation risks are also offered. Evolution laws are demonstrated in the genomic universe, plant-microbe symbiosis, stabilizing and destabilizing (directional) selection. The last essay demonstrates the principles of organization operating in local animal populations, which are approached as social organisms of complex systemic nature. The chapter 'Radiation-Induced Aging and Genetic Instability of Mesenchymal Stem Cells: An Issue for Late Health Effects?' is available open access under a CC BY 4.0 license.

Sacred Songs and Solos-Ira David Sankey 2017-09-13 The Sweet Singer of Methodism and a denizen of the Gospel Hall of Fame. Ira Sankey died with Gospel on his lips, having abandoned his sensible career for a life dedicated to God and surrounded by music. That enthusiasm is transmitted via the page and the colorful, emotively drenched lyrics to the reader. With the love of God in their mouths, Sankey hoped that the world would also take it into their hearts. The jury remains out on his main objective but what is certain is that Ira himself went straight to the heart of Gospel music. This broad anthology of Christian devotional music and hymns is a pleasure to read and to vocalise, if you so choose. Not only will it spark old and beloved memories but it will bring you new, dramatic, emotional material to add to your personal repertoire. Allow yourself to be wrapped in your favourite Christmas carol or submerge and enjoy the catharsis of a rousing piece on religious sorrow and divine retribution. Those with an interest in theological matters, the historical development of devotional music, hobbyists and those seeking an accessible medium for communicating all aspects of the Christian faith will be well served by this volume. Not only will you find music and lyrics in Sacred Songs and Solos but you will also find references to the relevant biblical material, a synopsis of the development of gospel music and by inference the influence of Ira Sankey himself on the genre. Enterprise Resource Planning and Supply Chain Management-Karl E. Kurbel 2013-08-23 This book is about running modern industrial enterprises with the help of information systems. Enterprise resource planning (ERP) is the core of business information processing. An ERP system is the backbone of most companies' information systems landscape. All major business processes are handled with the help of this system. Supply chain management (SCM) looks beyond the individual company, taking into account that enterprises are increasingly concentrating on their core competencies, leaving other activities to suppliers. With the growing dependency on the partners, effective supply chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market - SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out "in the real world".

The Archaeology of Medieval Bookbinding-J. A. Szirmai 1999 In the past, studies of the history of bookbinding were mainly concerned with the exterior decoration. This book focuses attention primarily on the physical aspects of the binding and its construction principles. It is an expanded version of a series of lectures delivered by the author while Visiting Professor at the University of Amsterdam in 1987, supplemented with the results of ten years of intensive research in major libraries on the Continent, the United Kingdom and the USA. It surveys the evolution of binding structures from the introduction of the codex two thousand years ago to the close of the Middle Ages. Part I reviews the scanty physical evidence from the Mediterranean heritage, the early Coptic, Islamic and Ethiopian binding structures and their interrelation with those of the Byzantine realm. Part II is devoted to a detailed analysis of Western binding techniques, distinguishing the carolingian, romanesque and gothic wooden-board bindings as the main typological entities; their structure and function is

compared with those of contemporary limp bindings. The book is illustrated with over 200 drawings and photographs and contains a comprehensive bibliography.

Assembly Language Programming-Vincent Mahout 2013-03-04 ARM designs the cores of microcontrollers which equip most "embedded systems" based on 32-bit processors. Cortex M3 is one of these designs, recently developed by ARM with microcontroller applications in mind. To conceive a particularly optimized piece of software (as is often the case in the world of embedded systems) it is often necessary to know how to program in an assembly language. This book explains the basics of programming in an assembly language, while being based on the architecture of Cortex M3 in detail and developing many examples. It is written for people who have never programmed in an assembly language and is thus didactic and progresses step by step by defining the concepts necessary to acquiring a good understanding of these techniques.

Disability and New Media-Katie Ellis 2011-05-11 Disability and New Media examines how digital design is triggering disability when it could be a solution. Video and animation now play a prominent role in the World Wide Web and new types of protocols have been developed to accommodate this increasing complexity. However, as this has happened, the potential for individual users to control how the content is displayed has been diminished. Accessibility choices are often portrayed as merely technical decisions but they are highly political and betray a disturbing trend of ableist assumption that serve to exclude people with disability. It has been argued that the Internet will not be fully accessible until disability is considered a cultural identity in the same way that class, gender and sexuality are. Kent and Ellis build on this notion using more recent Web 2.0 phenomena, social networking sites, virtual worlds and file sharing. Many of the studies on disability and the web have focused on the early web, prior to the development of social networking applications such as Facebook, YouTube and Second Life. This book discusses an array of such applications that have grown within and alongside Web 2.0, and analyzes how they both prevent and embrace the inclusion of people with disability.
