New Perspectives on Information Systems Development-Hari Harindranath 2012-12-06 This book is a result of the Tenth International Conference on Information Systems Development (ISD2001) held at Royal Holloway, University of London, United Kingdom, during September 5-7, 2001. ISD 2001 carries on the fine tradition established by the first Polish-Scandinavian Seminar on Current Trends in Information Systems Development Methodologies, held in Gdansk, Poland in 1988. Through the years, this seminar evolved into an International Conference on Information Systems Development. The Conference gives participants an opportunity to express ideas on the current state of the art in information systems development, and to discuss and exchange views on new methods, tools, applications as well as theory. In all, 55 papers were presented at ISD2001 organized into twelve tracks covering the following themes: Systems Analysis and Development, Modelling, Methodology, Database Systems, Collaborative Systems, Theory, Knowledge Management, Project Management, IS Education, Management issues, E-Commerce, and Technical Issues. We would like to thank all the contributing authors for making this book possible and for their participation in ISD2001. We are grateful to our panel of paper reviewers for their help and support. We would also like to express our sincere thanks to Ceri Bowyer and Steve Brown for their unfailing support with organizing ISD2001.

Multiple User Interfaces-Ahmed Sefyah 2004-01-16 Multiple User Interfaces allow people using mobile phones, lap tops, desk tops, palm tops or PDAs to access and read information from their central server or the internet in a coherent and consistent way and to communicate effectively with other users who may be using different devices. MUIs provide multiple views of the information according to the device used and co-ordinate communication between the users.

Multiple User Interfaces: Engineering and Applications Frameworks is the first work to describe user interface design for mobile and hand-held devices such as mobile phones. Given the proliferation of books on web site design in the late '90s, this promises to be the forerunner in a new wave of books dealing with the issues specific to small screens, limited memory and wireless transmission. It also deals with problems relating to multi-user functionality and sharing the same application over various platforms. Offers a comprehensive account of state-of-the-art research Combines human and technical aspects including social interaction, workflow, HCI, & system architectures. Provides practical toolkits, guidelines and experience reports Includes contributions from leading experts at all the key institutions - Virginia Tech, Concordia University, Lancaster University, Ericsson & Intel With such a unique and cutting-edge approach researchers and developers working on user interface design in companies manufacturing handsets and other portable devices, university HCI groups and companies providing web-based information services for delivery to hand-held devices will find this indispensable.

A Hierarchical Coordinate System for Geoprocessing and Cartography-Geoffrey H. Dutton 1999 When spatial data is digitized for use in geographic information systems and other software, information about its original scale, resolution and accuracy is frequently lost. As a result, using such information at different scales and combining it with data from other sources may be difficult. Mapping vector data at smaller than the original scale requires its generalization, which is usually handled by post-processing in ways that are only weakly supported by databases. The models and methods described in this book overcome many such problems by providing a multi-resolution data representation that allows retrieval of map data at a hierarchy of scales, as well as documenting the accuracy of every spatial coordinate.

Sites Unseen-William A. Gleason 2011-08-22 Sites Unseen examines the complex intertwining of race and architecture in nineteenth and early-twentieth century American culture, the period not only in which American architecture came of age professionally in the U.S. but also in which ideas about architecture became a prominent part of broader conversations about American culture, history, politics, and—although we have not yet understood this clearly—race

relations. This rich and copiously illustrated interdisciplinary study explores the ways that American writing between roughly 1850 and 1930 concerned itself, often intensely, with the racial implications of architectural space primarily, but not exclusively, through domestic architecture. In addition to identifying an archive of provocative primary materials, Sites Unseen draws significantly on important recent scholarship in multiple fields ranging from literature, history, and material culture to architecture, cultural geography, and urban planning. Together the chapters interrogate a variety of expressive American vernacular forms, including the dialect tale, the novel of empire, letters, and pulp stories, along with the plantation cabin, the West Indian cottage, the Latin American plaza, and the “Oriental” parlor. These are some of the overlooked plots and structures that can and should inform a more comprehensive consideration of the literary and cultural meanings of American architecture. Making sense of the relations between architecture, race, and American writing of the long nineteenth century—in their regional, national, and hemispheric contexts—Sites Unseen provides a clearer view not only of this catalytic era but also more broadly of what architectural historian Dell Upton has aptly termed the social experience of the built environment.
