CLIL in progress. From theoretical issues to classroom practice-  
Serafina Filice 2016-12-10 Over the years, various types of  
experimental projects have been carried out in Italy at different  
levels of education. CLIL practices have moved from limited small-  
scale experiments to elaborated projects involving technology,  
materials design and the creation of CLIL networks. This volume is  
a collection of works by both language and content teachers at all  
levels of education who have, in the past six years, embarked on a  
CLIL-type journey. The book is organized into two sections; the first  
part highlights some considerations that are more theoretical in  
nature. The purpose is to provide moments of reflection on these

issues and/or bring to light other matters that merit further discussion. The second part is more pragmatic in nature dealing with proposals and projects already implemented in schools and at University. The chapters extol the numerous studies that have been going on in this field in the past decades. They contribute to the existing research in terms of small-scale explorations that highlight the development of CLIL over the years, a cautious progress that has led professionals to move from initial steps or simple trials to more complex tangible CLIL learning objects. A testimony of diversity in approaches showing how rich and vibrant the field of CLIL studies is and will continue to be in the future.

The Future of Italian Teaching-Catherine Ramsey-Portolano

2015-02-01 This volume of essays, the product of a 2-day conference held at The American University of Rome in October 2012, brings together innovative and creative approaches to teaching Italian language, literature, culture and the arts. Featuring the perspectives of Italian professors teaching within a range of geographical contexts, from Europe (with a focus on Italy) to the UK and the USA, the essays also address a range of academic and social contexts, from university, study abroad and ERASMUS set ...

Linguæ & - Rivista di Lingue e Culture Moderne - 2/2010-AA.VV.

Linguæ & is a peer-reviewed journal which provides a new outlet for interdisciplinary research on language and literature, giving voice to a cross-cultural and multi-genre koine. While the idea for the journal was developed in the ambit of the post-graduate programme in European Intercultural Studies at the University of Urbino, Italy, its scope goes far beyond that of exploring pre-established cultural paradigms. Indeed, its strongly experimental and dialogic approach to the ongoing debate should serve as encouragement for the submission of new work by young researchers.

CLIL-Do Coyle 2010-04-01 CLIL (Content and Language Integrated Learning) has emerged since the millennium as a major trend in education. Written by Do Coyle, Philip Hood and David Marsh and drawing on their experience of CLIL in secondary schools, primary schools and English language schools across Europe, this book gives a comprehensive overview of CLIL. It summarises the theory which underpins the teaching of a content subject through another language and discusses its practical application, outlining the key directions for the development of research and practice. This book acknowledges the uncertainty many teachers feel about CLIL, because of the requirement for both language and subject knowledge, while providing theoretical and practical routes towards successful practice for all.

Step Into STEAM, Grades K-5-Sarah B. Bush 2019-03-14 Create meaningful and transformative K-5 STEAM learning experiences for

each and every student Make the most of your limited instructional time and become part of the Step into STEAM movement! Seamlessly design and implement K-5 STEAM inquiries that align carefully to key mathematics and science content and practices and prepare elementary students for their bright futures. Taking an opposite approach to existing resources that provide collections of disjointed STEAM activities, this book empowers teachers and schools to build cohesive and sustainable STEAM infrastructures—grounded in grade-level standards and purposeful assessment—to deepen the mathematics and science learning of each and every student.

Ettore Majorana: Unpublished Research Notes on Theoretical Physics-Salvatore Esposito 2008-10-15 Without listing his works, all of which are highly notable both for the originality of the methods utilized as well as for the importance of the results achieved, we limit ourselves to the following: In modern nuclear theories, the contribution made by this researcher to the introduction of the forces called 'Majorana forces' is universally recognized as the one, among the most fundamental, that permits us to theoretically comprehend the reasons for nuclear stability. The work of Majorana today serves as a basis for the most important research in this field. In atomic physics, the merit of having resolved some of the most -tricate questions on the structure of spectra through simple and elegant considerations of symmetry is due to Majorana. Lastly, he devised a brilliant method that permits us to treat the positive and negative electron in a symmetrical way, finally eliminating the necessity to rely on the extremely artificial and unsatisfactory hypothesis of an infinitely large electrical charge distributed in space, a question that had been tackled in vain by many other scholars [4].

more by jumping into the cockpit and soaring into Explore Flight! With 25 Great Projects, where they'll learn about the history of our human obsession to conquer the feat of flying. For kids ages 6-9, Explore Flight! With 25 Great Projects introduces them to the dreamers, inventors, aviation pioneers, and record breakers. They will read about the myths and legends of flying and about the wondrous flying machines of the past, present and future. They will learn that in the 15th century Leonardo da Vinci drew sketches of airplanes, helicopters and other flying machines, and that the first passengers in a hot air balloon were a sheep, a rooster, and a duck. Along the way, they will develop a better understanding of the rich history of aviation, investigate what causes flight, and learn about the science of aerodynamics. Projects and experiments range from making a paper airplane to building an airfoil. All the projects in this book are easy to follow, require little adult supervision, and use commonly found household products, many from the recycling.
