The Natural Gardens of North Carolina-B. W. Wells 2015-12-01 For seventy years, The Natural Gardens of North Carolina has been a must-read volume for anyone interested in wildflowers, native plants, ecology, or conservation in the state. This handsome revised edition features new line drawings and color photographs, an appendix that updates the botanical nomenclature, an introduction that focuses on B. W. Wells and his passion for the state's landscape, and an afterword that discusses the continuing relevance of Wells's ideas. One of the first scientists to write and lecture about ecology, Wells introduced North Carolinians to the extraordinary tapestry of "natural gardens," or plant communities, within the state's borders back in 1932. His purpose was to help readers understand a plant within its community—a pioneering concept at the time—and to promote conservation. Moving from the Atlantic coast westward, Wells identifies eleven major natural gardens: the sand dune community, salt marsh, freshwater marsh, swamp forest, aquatic vegetation, evergreen shrub bog (or pocosin), grass-sedge bog (or savanna), sandhill, old-field community, upland forest, and high mountain spruce-fer forest. He devotes the first part of his book to a general account of the vegetation and habitats of each community and then identifies and describes the wildflowers found there.

Bringing Nature Home-Douglas W. Tallamy 2009-09-01 "A fascinating study of the trees, shrubs, and vines that feed the insects, birds, and other animals in the suburban garden." —The New York Times As development and habitat destruction accelerate, there are increasing pressures on wildlife populations. In Bringing Nature Home, Douglas W. Tallamy reveals the unbreakable link between native plant species and native wildlife—native insects cannot, or will not, eat alien plants. When native plants disappear, the insects disappear, impoverishing the food source for birds and other animals. But there is an important and simple step we can all take to help reverse this alarming trend: everyone with access to a patch of earth can make a significant contribution toward sustaining biodiversity by simply choosing native plants. By acting on Douglas Tallamy's practical and achievable recommendations, we can all make a

difference.
