Master on Sports Cardiology, held in Rome from November 27 to December 15 1995 at the School of Sport and Institute of Sport Sciences of the Italian National Olympic Committee. The contributions, written by internationally acknowledged scientists, appeared after extensive and careful revision by the Authors, and represent current and highly profitable scientific material. The incentive to publish this work came from Springer-Verlag, a renowned publisher, and the articles have been compiled in *Advances in Sports Cardiology*. The present volume is an easy-to-consult, comprehensive and up-to-date reference. Possible future developments in cardiovascular evaluation in athletes have been covered, too. The cardiological evaluation of athletes represents a more than 30 years-old discipline in Italy, with legal implications, which compel physicians in this field to investigate in each individual athlete the possible, innermost causes of cardiovascular abnormality and to express a circumstantial prognostic assessment. Cardiologists in this field should have an extensive background in physiology but should also be aware of the indications and limits of the instrumental diagnostic procedures used in clinical practice as well as of the distinction between normal physiological adaptation to exercise and training and a true pathological cardiac process. Hence, sound basis in physiology with a major interest in clinical practice distinguishes sports cardiology as a new and original discipline.

Health Service Quality-John Ovretveit 1992-04-15 This book describes how health service staff and managers can apply quality methods to the special circumstances of health services, and tackle the many conflicting demands on these services in the 1990s. It is based on applied research into quality methods in a range of public and commercial services, and explains the theory and the practice of the "service quality revolution."

Epilepsy-Jerome Engel 2008 Written and edited by world-renowned authorities, this three-volume work is, to quote a reviewer, "the definitive textbook about seizures and epilepsy". This Second Edition is thoroughly updated and gives you a complete print and multimedia package: the three-volume set plus access to an integrated content Website. More than 300 chapters cover the spectrum of biology, physiology, and clinical information, from molecular biology to public health concerns in developing countries. Included are detailed discussions of seizure types and epilepsy syndromes; relationships between physiology and clinical events; psychiatric and medical comorbidity; conditions that could be mistaken for epilepsy; and an increasing range of pharmacologic, surgical, and alternative therapies, including vagus nerve stimulation and deep brain stimulation. This edition describes many new antiepileptic drugs, major advances in surgical treatment, and state-of-the-art neuroimaging, EEG, and other technologies for diagnosis and seizure prediction. A companion Website offers instant access to the complete, fully searchable text, plus an image bank of additional figures, video footage, and annual updates to selected chapters.

Human Physiology-Dee Unglaub Silverthorn 2013-07-23 This text broke ground with its thorough coverage of molecular physiology seamlessly integrated into a traditional homeostasis-based systems approach. This edition introduces a major reorganisation of the early chapters to provide the best foundation for the course and new art features that streamline review and essential topics so that students can access them more easily on an as-needed basis.

Political Corruption-Michael Johnston 2017-07-12 Corruption is once again high on the international policy agenda as a result of globalization, the spread of democracy, and major scandals and reform initiatives. But the concept itself has been a focus for social scientists for many years, and new findings and data take on richer meanings when viewed in the context of long-term developments and enduring conceptual

debates. This compendium, a much-enriched version of a work that has been a standard reference in the field since 1970, offers concepts, cases, and fresh evidence for comparative analysis. Building on a nucleus of classic studies laying out the nature and development of the concept of corruption, the book also incorporates recent work on economic, cultural, and linguistic dimensions of the problem, as well as critical analyses of several approaches to reform. While many authors are political scientists, work by historians, economists, and sociologists are strongly represented. Two-thirds of the nearly fifty articles are based either on studies especially written or translated for this volume, or on selected journal literature published in the 1990s. The tendency to treat corruption as merely a synonym for bribery is illuminated by analyses of the diverse terminology and linguistic techniques that help distinguish corruption problems in the major languages. Recent attempts to measure corruption, and to analyze its causes and effects quantitatively are also critically examined. New contributions emphasize especially: corruption phenomena in Asia and Africa; contrasts among region and regime types; comparing U.S. state corruption incidence; European Party finance and corruption; assessments of international corruption rating project; analyses of international corruption control treaties; unintended consequences of anti-corruption efforts. Cumulatively, the book combines description richness, analytical thrust, conceptual awareness, and contextual articulation.

Prognosis of Epilepsies-Pierre Jallon 2003 The last book on the prognosis of epilepsies was written by Rodin in 1968. For the next 35 years, many original papers or chapters in textbooks were published on this complex topic. Most of these endeavours, reflecting the clinician's highly detailed point of view were based on selected cases with little concern for the epidemiological context or upon the epidemiologist's population-based approach which tends to ignore important clinical details. Until quite recently, fundamental epidemiological aspects of epilepsy, as it is understood by clinicians, have not been explored, and clinicians viewed populationbased epidemiology as relatively irrelevant to their daily practice. This book is divided into two majors parts. Presentations in the first part address methodological issues

regarding prognostic studies (including remission and mortality) as well as results from long-term cohort studies. The second part contains presentations on the clinical aspects and prognosis of several individual epilepsy syndromes as well as presentations about the prognosis of status epilepticus and outcome of frontal and temporal lobe surgery.

Transferring Human Impedance Regulation Skills to Robots-Arash Ajoudani 2015-11-05 This book introduces novel thinking and techniques to the control of robotic manipulation. In particular, the concept of teleimpedance control as an alternative method to bilateral force-reflecting teleoperation control for robotic manipulation is introduced. In teleimpedance control, a compound reference command is sent to the slave robot including both the desired motion trajectory and impedance profile, which are then realized by the remote controller. This concept forms a basis for the development of the controllers for a robotic arm, a dual-arm setup, a synergy-driven robotic hand, and a compliant exoskeleton for improved interaction performance.

Epileptic Syndromes in Infancy, Childhood and Adolescence - 5th edition-Bureau Michelle 2012-11-12 The ultimate reference book : the 5th updated edition of the famous "blue guide". Included : A DVD with new sequences completes each chapter! Epileptology changes. The syndromic approach is completed by an etiological approach, based on the major advances in genetics and functional genetics. New entities have found their place, and a purely descriptive, "electroclinical" approach is no longer adapted in many circumstances. The 5th edition of the Blue Guide includes the most recent advances. It was necessary to justify the physiological, epidemiologic, genetic and therapeutic approaches and to consider them in the light of the new classification efforts, which are still in the making. Nevertheless, the description of epileptic syndromes, both classical and recent, remains at the core of this book.

Usurpers-Francisco Ayala 1996 The stories in 'Usurpers' draw their inspiration from the history of medieval and Golden Age Spain, but their theme is universal - the dreadful consequences of humankind's fascination with power.

Global Corruption Report 2006-Transparency International 2005-12-20 TI has once again shown its ability to combine research and policy analysis not just to shine a light on the deeply embedded problems of corruption ... but to propose progressive solutions. Former World Bank President James Wolfensohn on the Global Corruption Report
In the health sector, corruption is a matter of life or death. It can take many forms: from medical professionals who sell medicines or services that should be freely available, to high-level government officials who embezzle money from health budgets, to pharmaceutical companies that buy influence over research agendas. The impact of corruption is always felt by the end user -- the sick person who is forced to pay over the odds or who is given unsafe, counterfeit medicines. The 2006 edition of Transparency International's Global Corruption Report shows the impact that corruption has on health care in rich and poor countries. From high-level bribery in Costa Rica to informal payments in Hungary, case studies from around the world explore the characteristics of the health sector that make it so prone to corruption. In a special section dedicated to corruption in HIV/AIDS, the report warns that the large sums being poured into fighting the world's deadliest diseases need to be safeguarded against abuse. There is also a detailed analysis of the problems of the pharmaceutical system. The report also offers an annual round-up of worldwide developments and tracks major trends in more than 40 countries. The Global

Corruption Report 2006 is the only report of its kind, and is an essential reference source for anyone who wants the latest research on how corruption affects everything from health to education and the oil and gas industries.

England, England-Julian Barnes 2012-12-18 Grotesque visionary Sir Jack Pitman has an idea. Since most people are too lazy to travel from landmark to landmark, why not simplify things and create a new England on the Isle of Wight? Unfortunately, his idea is a huge success, and the resulting theme park threatens to supersede the original. Called England, England, it has all the elements of "Old England" in one convenient location. Wander into the new Sherwood Forest and you may spot Robin Hood and his now sexually ambiguous Merrie Men. Or take a stroll to see Stonehenge and Anne Hathaway's Cottage, enjoy a ploughman's lunch atop the White Cliffs of Dover, then pop over to see the Royals, now on contract to Sir Jack, in their scaled-down version of Buckingham Palace. Every detail has been considered: even the postcards come pre-stamped! Julian Barnes' first novel in six years is a ferociously funny examination of the search for authenticity and truth in a fabricated world.

Sweet Hope-Mary Bucci Bush 2011 Sweet Hope is a novel about the friendship between two families, one Black and one Italian, living and working together on a Mississippi Delta cotton plantation 1901-1906. Italians were illegally imported to the South under false pretenses and held in a contract labor system designed to put and keep them in debt while the few remaining African American sharecroppers taught the Italians to work cotton, speak English, and survive. A vicious manager/ overseer, an absentee plantation owner, a rape, an interracial "Romeo and Juliet" love affair, a murder, and hints of a Federal investigation complicate the characters' lives as they learn bitter truths about race and friendship in America. The novel was inspired by the childhood experiences of Bush's grandmother and her family who were unwitting participants in the "Italian Colony Experiment."

Caspar David Friedrich-Johannes Grave 2017-08 Now available in a new format, this beautifully illustrated volume on the controversial nineteenth-century Romantic artist addresses his modern critics while deepening our appreciation for his singular genius. -A painting must stand as a painting, made by human hand, - wrote Caspar David Friedrich, -not seek to disguise itself as Nature.- One of his generation's most popular painters, Friedrich imagined landscapes of powerful beauty and spirituality from within the

confines of his studios. This breathtaking monograph, filled with glorious reproductions and details of his paintings, argues for Friedrich's reputation as a sublime artist and interpreter of nature. In his thoughtful and well-researched commentary, author Johannes Grave explores Friedrich's approach to landscape painting as well as his revolutionary thoughts about how these paintings should be received by their viewers. Looking closely at pieces such as *Monk by the Sea*, *Abbey in the Oakwood*, and the *Tetschener Altar*, Grave shows how Friedrich developed an innovative approach to landscape painting, one that communicated a new sense of space and time, and which draws the viewer into a unique aesthetic experience. Highly readable, insightful, and copiously illustrated, this compelling book sheds crucial light on Friedrich's celebrated body of work.

The Role of Translators in Children's Literature-Gillian Lathey 2010-09-13 This book offers a historical analysis of key classical translated works for children, such as writings by Hans Christian Andersen and Grimms' tales. Translations dominate the earliest history of texts written for children in English, and stories translated from other languages have continued to shape its course to the present day. Lathey traces the role of the translator and the impact of translations on the history of English-language children's literature from the ninth century onwards. Discussions of popular texts in each era reveal fluctuations in the reception of translated children's texts, as well as instances of cultural mediation by translators and editors. Abridgement, adaptation, and alteration by translators have often been viewed in a negative light, yet a closer examination of historical translators' prefaces reveals a far more varied picture than that of faceless conduits or wilful censors. From William Caxton's dedication of his translated History of Jason to young Prince Edward in 1477 ('to thentent/he may begynne to lerne read Englyssh'), to Edgar Taylor's justification of the first translation into English of Grimms' tales as a means of promoting children's imaginations in an age of reason, translators have recorded in prefaces and other writings their didactic, religious, aesthetic, financial, and even political purposes for translating children's texts.

The Polished Hoe-Austin Clarke 2003-09-03 Winner of the 2002 Scotiabank Giller Prize and of the 2003 Commonwealth Writers' Prize: Best Book (Canada and the Caribbean) When an elderly Bimshire village woman calls the police to confess to a murder, the result is a shattering all-night vigil that brings together elements of the African diaspora in one epic sweep. Set on the post-colonial West Indian island of Bimshire in 1952, The Polished Hoe unravels over the course of 24 hours but spans the lifetime of one woman and the collective experience of a society informed by slavery. As the novel opens, Mary Mathilda is giving confession to Sargeant, a police officer she has known all her life. The man she claims to have murdered is Mr. Belfeels, the village plantation owner for whom she has worked for more than thirty years. Mary has

also been Mr. Belfeels' mistress for most of that time and is the mother of his only son, Wilberforce, a successful doctor. What transpires through Mary's words and recollections is a deep meditation about the power of memory and the indomitable strength of the human spirit. Infused with Joycean overtones, this is a literary masterpiece that evokes the sensuality of the tropics and the tragic richness of Island culture.

Ireland Since 1939-Henry Patterson 2007-08-02 Synthesizing a vast body of scholarly work, Henry Patterson offers a compelling narrative of contemporary Ireland as a place poised between the divisiveness of deep-seated conflict and the modernizing - but perhaps no less divisive - pull of ever-greater material prosperity. Although the two states of Ireland have strikingly divergent histories, Patterson shows more clearly than any previous historian how interdependent those histories - and the mirroring ideologies that have fuelled them - have been. With its fresh and unpredictable readings of key events and developments on the island since the outbreak of the second world war, Ireland Since 1939 is an authoritative and gripping account from one of the most distinguished Irish historians at work today.

The Ash Wednesday Supper-Giordano Bruno 1975 Giordano Bruno was an itinerant Italian friar who was burned at the stake in 1600 for heresies, which included his rejection of the Ptolemaic cosmology. Of his important writings, 'La Cena de le ceneri' was one of the first works in which Copernican theory had impact outside the sphere of the natural sciences. Arguing for the physical reality of the infinite universe with no centre, Bruno sought to prove that each man is every man, that conflict would be resolved if all men accepted the unifying potential of his hermetic religion. Using this radical cosmology, Bruno sought to heal the secular and religious wounds of sixteenth-century Europe.

Crystallography Made Crystal Clear-Gale Rhodes 2012-12-02 Crystallography Made Crystal Clear is designed to meet the need for an X-ray analysis that is between brief textbook sections and complete treatments. The book provides non-crystallographers with an intellectually satisfying explanation of the principles of how protein models are gleaned from X-ray analysis. The understanding of these concepts will foster wise use of the models, including the recognition of the strengths and weaknesses of pictures or

computer graphics. Since proteins comprise the majority of the mass of macromolecules in cells and carry out biologically important tasks, the book will be of interest to biologists. Provides accessible descriptions of principles of x-ray crystallography, built on simple foundations for anyone with a basic science background Leads the reader through clear, thorough, unthreatening explanations of the mathematics behind crystallography Explains how to read crystallography papers in research journals If you use computer-generated models of proteins or nucleic acids for: Studying molecular interactions Designing ligands, inhibitors, or drugs Engineering new protein functions Interpreting chemical, kinetic, thermodynamic, or spectroscopic data Studying protein folding Teaching macromolecule structure, and if you want to read new structure papers intelligently; become a wiser user of macromolecular models; and want to introduce undergraduates to the important subject of x-ray crystallography, then this book is for you.

The New Rules of Posture-Mary Bond 2006-11-29 A manual for understanding the anatomical and emotional components of posture in order to heal chronic pain • Contains self-help exercises and ergonomics information to help correct unhealthy movement patterns • Teaches how to adopt suitable posture in the modern sedentary world Many people cause their own back and body pain through their everyday bad postural and movement habits. Many sense that their poor posture is probably the root of the problem, but they are unable to change long-standing habits. In The New Rules of Posture, Mary Bond approaches postural changes from the inside out. She explains that healthy posture comes from a new sense we can learn to feel, not by training our muscles into an ideal shape. Drawing from 35 years of helping people improve their bodies, she shows how habitual movement patterns and emotional factors lead to unhealthy posture. She contends that posture is the physical action we take to orient ourselves in relation to situations, emotions, and people; in order to improve our posture, we need to examine both our physical postural traits and the self-expression that underlies the way we sit, stand, and move. The way we walk, she says, is our body's signature. Bond identifies the key anatomical features that impact alignment,

particularly in light of our modern sedentary lives, and proposes six zones that help create postural changes: the pelvic floor, the breathing muscles, the abdomen, the hands, the feet, and the head. She offers self-help exercises that enable healthy function in each zone as well as information on basic ergonomics and case histories to inspire us to think about our own habitual movements. This book is a resource for Pilates, yoga, and dance instructors as well as healthcare professionals in educating people about postural self-care so they can relieve chronic pain and enjoy all life activities with greater ease.

How can he possibly complete his investigation when he has fallen in love with the chief suspect?

Democratic Dialogue in Education-Megan Boler 2004 This collection brings into dialogue authors from a range of disciplines and perspectives to address the thorny question of how to balance the demands of «democratic dialogue» with the reality of a world in which each voice does not carry equal weight. Should rules be in place, for example, that correct for such imbalances by privileging some voices or muting others? Should separate spaces be created for traditionally disadvantaged groups to speak only among themselves? Is democratic dialogue in an inclusive sense even a possibility in a world divided by multiple dimensions of power and privilege? Leading theorists from several countries share a concern for social justice and present radically different interpretations of what democracy means for educational practice. In a format unusual for such collections, the essays speak directly to each other about significant moral, philosophical, and practical differences regarding how to effectively engage students as critical participants in classrooms fraught with power and difference. The authors draw from philosophy, critical race theory, sociology, feminist, and poststructural studies to address topics including hate speech, freedom of expression, speech codes, the meanings of silence, conceptions of voice and agency, and «political correctness». They explore honestly and self-critically the troubling and disturbing dimensions

of speech and silence that situate the classroom as a volatile microcosm of contemporary political contradictions.
