Raising Generation Rx-Linda M. Blum 2015-03-13 Winner, 2016 Outstanding Publication in the Sociology of Disability, American Sociological Association, Section Disability and Society Recent years have seen an explosion in the number of children diagnosed with “invisible disabilities” such as ADHD, mood and conduct disorders, and high-functioning autism spectrum disorders. Whether they are viewed as biological problems in brain wiring or as results of the increasing medicalization of childhood, the burden of dealing with the day-to-day trials and complex medical and educational decisions falls almost entirely on mothers. Yet few ask how these mothers make sense of their children’s troubles, and to what extent they feel responsibility or blame. Raising Generation Rx offers a groundbreaking study that situates mothers’ experiences within an age of neuroscientific breakthrough, a high-stakes knowledge-based economy, cutbacks in public services and decent jobs, and increased global competition and racialized class and gender inequality. Through in-depth interviews, observations of parents’ meetings, and analyses of popular advice, Linda Blum examines the experiences of diverse mothers coping with the challenges of their children’s “invisible disabilities” in the face of daunting social, economic, and political realities. She reveals how mothers in widely varied households learn to advocate for their children in the dense bureaucracies of the educational and medical systems; wrestle with anguishing decisions about the use of psychoactive medications; and live with the inescapable blame and stigma in their communities.

Can't Catch a Break-Susan Starr Sered 2014-09-12 Based on five years of fieldwork in Boston, Can't Catch a Break documents the day-to-day lives of forty women as they struggle to survive sexual abuse, violent communities, ineffective social and therapeutic programs, discriminatory local and federal policies, criminalization, incarceration, and a broad cultural consensus that views suffering as a consequence of personal flaws and bad choices. Combining hard-hitting policy analysis with an intimate account of how marginalized women navigate an unforgiving world, Susan Sered and Maureen Norton-Hawk shine new light on the deep and complex connections between suffering and social inequality.

Kids These Days-Malcolm Harris 2017-11-07 In Kids These Days, early Wall Street occupier Malcolm Harris gets real about why the Millennial generation has been wrongly stereotyped, and dares us to confront and take charge of the consequences now that we are grown up. Millennials have been stereotyped as lazy, entitled, narcissistic, and immature. We've gotten so used to sloppy generational analysis filled with dumb clichés about young people that we've lost sight of what really unites Millennials. Namely: We are the most educated and hardworking generation in American history. We poured historic and insane amounts of time and money into preparing ourselves for the 21st-century labor market. We have been taught to consider working for free (homework, internships) a privilege for our own benefit. We are poorer, more medicated, and more precariously employed than our parents, grandparents, even our great grandparents,

with less of a social safety net to boot. Kids These Days is about why. In brilliant, crackling prose, early Wall Street occupier Malcolm Harris gets mercilessly real about our maligned birth cohort. Examining trends like runaway student debt, the rise of the intern, mass incarceration, social media, and more, Harris gives us a portrait of what it means to be young in America today that will wake you up and piss you off. Millennials were the first generation raised explicitly as investments, Harris argues, and in Kids These Days he dares us to confront and take charge of the consequences now that we are grown up.

Genetic Discrimination-Gerard Quinn 2014-11-20 As genetic technologies advance, genetic testing may well offer the prospect of detecting the onset of future disabilities. Some research also forwards that certain behavioural profiles may have a strong genetic basis, such as the determination to succeed, or the propensity for risk-taking. As this technology becomes more prevalent, there is a danger that genetic information may be misused by third parties and that particular genetic profiles may be discriminated against by employers, by providers of social goods and services, such as insurance companies and even by educational facilities. This book explores the different forms and potential uses of genetic testing. Drawing together leading experts in disability law, bioethics, health law and a range of related fields, it highlights the ethical and legal challenges arising as a result of emerging and rapidly advancing genetic science. On examining transatlantic perspectives on the matter, chapters in the book ask whether the US Genetic Information Nondiscrimination Act (GINA) is proving to be an effective tool in addressing the issue of genetic discrimination and alleviating fears of discrimination. The book also reviews what insights may be gained from GINA within employment and health insurance contexts, and asks how the UN Convention on the Rights of Persons with Disabilities (CRPD) may impact similar debates within the European Union. The book focuses particularly on the legislative and policy framework in the European Union, with an emphasis on the gaps in protection and the scope for specific legislative action in this area. This book will be of great interest to scholars and students of discrimination law, bioethics and disability law, and will be of considerable use to legal practitioners, medical practitioners and policy-makers in this area.

Disability Research Today-Tom Shakespeare 2015-03-05 Grouped around four central themes - illness and impairment, disabling processes, care and control, and communication and representations - this collection offers a fresh perspective on disability research, showing how theory and data can be brought together in new and exciting ways. Disability Research Today starts by showing how engaging with issues around illness and impairment is vital to a multidisciplinary understanding of disability as a social process. The second section explores factors that affect disabled people, such as homelessness, violence and unemployment. The third section turns to social care, and how disabled people are prevented from living with independence and dignity. Finally, the last section examines how different imagery and technology impacts our understandings of disability and deafness. Showcasing empirical work from a range of countries, including Japan, Norway, Italy, Australia, India, the UK, Turkey, Finland and Iceland, this collection shows how disability studies can be simultaneously sophisticated, accessible and policy-relevant. Disability Research Today is suitable for students and researchers in disability studies, sociology, social policy, social work, nursing and health studies.

How Not to Hate Your Husband After Kids-Jancee Dunn 2017-03-21 A hilariously candid account of one woman's quest to bring her post-baby marriage back from the brink, with life-changing, real-world advice. "Get this for your pregnant friends, or yourself." --People Recommended by Nicole Cliffe in Slate Featured in People Picks A Red Tricycle Best Baby and Toddler Parenting Book of the year One of Mother magazine's favorite parenting books of the year *How Not To Hate Your Husband After Kids* tackles the last taboo subject of parenthood: the startling, white-hot fury that new (and not-so-new) mothers often have for their mates. After Jancee Dunn had her baby, she found that she was doing virtually all the household chores, even though she and her husband worked equal hours. She asked herself: How did I become the 'expert' at changing a diaper? Many expectant parents spend weeks researching the best crib or safest car seat, but spend little if any time thinking about the titanic impact the baby will have on their marriage - and the way their marriage will affect their child. Enter Dunn, her well-meaning but blithely unhelpful husband, their daughter, and her boisterous extended family, who show us the ways in which outmoded family patterns and traditions thwart the overworked, overloaded parents of today. On the brink of marital Armageddon, Dunn plunges into the latest relationship research, solicits the counsel of the country's most renowned couples' and sex therapists, canvasses fellow parents, and even consults an FBI hostage negotiator on how to effectively contain an "explosive situation." Instead of having the same fights over and over, Dunn and her husband must figure out a way to resolve their larger issues and fix their family while there is still time. As they discover, adding a demanding new person to your relationship means you have to reevaluate--and rebuild--your marriage. In an exhilarating twist, they work together to save the day, happily returning to the kind of peaceful life they previously thought was the sole province of couples without children. Part memoir, part self-help book with actionable and achievable advice, *How Not To Hate Your Husband After Kids* is an eye-opening look at how the man who got you into this position in this first place is the ally you didn't know you had.

Between Feminism and Labor-Linda M. Blum 1991-02-07 "Working from grass-roots cases, Linda Blum develops an astute and groundbreaking analysis of the comparable worth strategy for gender pay equity. The Joy Luck Club-Amy Tan 2006-09-21 "The Joy Luck Club is one of my favorite books. From the moment I first started reading it, I knew it was going to be incredible. For me, it was one of those once-in-a-lifetime reading experiences that you cherish forever. It inspired me as a writer and still remains hugely inspirational." —Kevin Kwan, author of *Crazy Rich Asians* Amy Tan's beloved, New York Times bestselling tale of mothers and daughters Four mothers, four daughters, four families whose histories shift with the four winds depending on who's "saying" the stories. In 1949 four Chinese women, recent immigrants to San Francisco, begin meeting to eat dim sum, play mahjong, and talk. United in shared unspeakable loss and hope, they call themselves the Joy Luck Club. Rather than sink into tragedy, they choose to gather to raise their spirits and money. "To despair was to wish back for something already lost. Or to prolong what was already unbearable." Forty years later the stories and history continue. With wit and sensitivity, Amy Tan examines the sometimes painful, often tender, and always deep connection between mothers and daughters. As each woman reveals her secrets, trying to unravel the truth about her life, the strings become more tangled, more entwined. Mothers boast or despair over daughters, and daughters roll their eyes even as they feel the inextricable tightening of their matriarchal ties. Tan is an astute storyteller, enticing readers to immerse themselves into these lives of complexity and mystery.

Wander Woman-Marcia Reynolds 2010-06-14 Presents fresh research and powerful stories to give voice to a new generation of women driven by challenge and

change Offers compelling advice on how to make wandering a life strategy, not just a series of unplanned events Includes probing questions and thought-provoking exercises to help readers find peace in life's chaos and confusion 2011 Axiom Award Gold Medal winner in the category of Women in Business There's a new generation of high-achieving women today—confident, ambitious, accomplished, driven. And yet, as master coach Marcia Reynolds discovered, many of them are also anxious, discontented, and frustrated. They're constantly questioning their purpose, juggling multiple roles, and reevaluating their goals. As a result they're restless—they move from job to job, from challenge to challenge, almost on impulse. They're wander women. Existing personal growth books, so focused on empowerment and encouragement, can't help these women. They don't need to find their voice—they know how to roar. They don't expect balance in their lives—but they long to find peace in the chaos. They aren't necessarily focused on gaining a seat in the boardroom—they want projects that mean something or businesses they run on their own. Reynolds helps wander women understand the roots of their restlessness and make their wandering a conscious strategy, not a reaction. Drawing on extensive research and interviews she illuminates the needs that drive their decisions and the core assumptions that lock them into rigid perfectionist patterns. She offers a wealth of exercises and practices that will enable wander women to reset their mental programming, discover new ways of finding direction, and thoughtfully choose and plan their futures, whether they climb the corporate ladder, find satisfaction below the glass ceiling, or set out on their own. For every woman plagued by frustration and self-doubt—"Will what I've done ever feel good enough?"—Wander Woman sets the stage to uncover the answers to life's tough questions about meaning and purpose, significance and value, and the legacy you can leave from a life lived well.

The Eternal Mark of a Mom-Linda Weber 2019-04-09 A nurturing mother is vital to the character and future of a child. But what is a nurturing mother? The Coddling of the American Mind-Greg Lukianoff 2018-09-04 Something is going wrong on many college campuses in the last few years. Rates of anxiety, depression, and suicide are rising. Speakers are shouted down. Students and professors say they are walking on eggshells and afraid to speak honestly. How did this happen? First Amendment expert Greg Lukianoff and social psychologist Jonathan Haidt show how the new problems on campus have their origins in three terrible ideas that have become increasingly woven into American childhood and education: what doesn't kill you makes you weaker; always trust your feelings; and life is a battle between good people and evil people. These three Great Untruths are incompatible with basic psychological principles, as well as ancient wisdom from many cultures. They interfere with healthy development. Anyone who embraces these untruths—and the resulting culture of safetyism—is less likely to become an autonomous adult able to navigate the bumpy road of life. Lukianoff and Haidt investigate the many social trends that have intersected to produce these untruths. They situate the conflicts on campus in the context of America's rapidly rising political polarization, including a rise in hate crimes and off-campus provocation. They explore changes in childhood including the rise of fearful parenting, the decline of unsupervised play, and the new world of social media that has engulfed teenagers in the last decade. This is a book for anyone who is confused by what is happening on college campuses today, or has children, or is concerned about the growing inability of Americans to live, work, and cooperate across party lines.

Dis/ability Studies-Dan Goodley 2014-04-24 In this ground-breaking new work, Dan Goodley makes the case for a novel, distinct, intellectual, and political project - dis/ability studies - an orientation that might encourage us to think again about the phenomena of disability and ability. Drawing on a range of interdisciplinary areas, including sociology, psychology, education, policy and cultural studies, this much needed text takes the most topical and important issues in critical disability theory, and pushes them into new theoretical territory. Goodley argues that we are entering a time of dis/ability studies, when both categories of disability and ability require expanding upon as a response to the global politics of neoliberal capitalism. Divided into two parts, the first section traces the dual processes of ableism and disablism, suggesting that one cannot exist without the other, and makes the case for a research-driven and intersectional analysis of dis/ability. The second section applies this new analytical framework to a range of critical topics, including: The biopolitics of dis/ability and debility Inclusive education Psychopathology Markets, communities and civil society. Dis/ability Studies provides much needed depth, texture and analysis in this emerging discipline. This accessible text will appeal to students and researchers of disability across a range of disciplines, as well as

disability activists, policymakers, and practitioners working directly with disabled people.

Investing in the Health and Well-Being of Young Adults-National Research Council 2015-01-27 Young adulthood - ages approximately 18 to 26 - is a critical period of development with long-lasting implications for a person's economic security, health and well-being. Young adults are key contributors to the nation's workforce and military services and, since many are parents, to the healthy development of the next generation. Although 'millennials' have received attention in the popular media in recent years, young adults are too rarely treated as a distinct population in policy, programs, and research. Instead, they are often grouped with adolescents or, more often, with all adults. Currently, the nation is experiencing economic restructuring, widening inequality, a rapidly rising ratio of older adults, and an increasingly diverse population. The possible transformative effects of these features make focus on young adults especially important. A systematic approach to understanding and responding to the unique circumstances and needs of today's young adults can help to pave the way to a more productive and equitable tomorrow for young adults in particular and our society at large. Investing in The Health and Well-Being of Young Adults describes what is meant by the term young adulthood, who young adults are, what they are doing, and what they need. This study recommends actions that nonprofit programs and federal, state, and local agencies can take to help young adults make a successful transition from adolescence to adulthood. According to this report, young adults should be considered as a separate group from adolescents and older adults. Investing in The Health and Well-Being of Young Adults makes the case that increased efforts to improve high school and college graduate rates and education and workforce development systems that are more closely tied to high-demand economic sectors will help this age group achieve greater opportunity and success. The report also discusses the health status of young adults and makes recommendations to develop evidence-based practices for young adults for medical and behavioral health, including preventions. What happens during the young adult years has profound implications for the rest of the life course, and the stability and progress of society at large depends on how any cohort of young adults fares as a whole. Investing in The Health and Well-Being of Young Adults will provide a roadmap to improving outcomes for this age group as they transition from adolescence to adulthood.

The Moral Judgement of the Child-Jean Piaget 1997 "This classic study examines a problem that stands at the heart of society: How does a child distinguish between right and wrong?" "Professor Piaget and his colleagues begin their investigation by analyzing the "rules of the game" - in this case a seemingly simple game of marbles - as handed down from one group of children to another. They observe the child's total acceptance of the consensus rules and describe the moral pressure of the group on the individual. Piaget proceeds to an analysis of lying, cheating, adult authority, punishment, and responsibility, noting and evaluating the changing attitudes of growing children toward these "moral realities." "The book concludes with a comparison of the findings of this significant study with those theories in social psychology and sociology that bear directly on the moral development of the child."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. Off-Ramps and On-Ramps-Sylvia Ann Hewlett 2007-05-15 With talent shortages looming over the next decade, what can companies do to attract and retain the

large number of professional women who are forced off the career highway? By documenting the successful efforts of a group of cutting-edge global companies to retain talented women and reintegrate them if they've already left, *Off-Ramps and On-Ramps* answers this critical question. Working closely with companies such as Ernst & Young, Goldman Sachs, Time Warner, General Electric and others, author Sylvia Ann Hewlett identifies what works and why. Based on firsthand experience with these companies, along with extensive data that provides the most comprehensive and nuanced portrait of women's career paths, this book documents the actions forward-thinking companies must take to reverse the female brain drain and ensure their access to talent over the long term.

At the Breast-Linda M. Blum 2000 In our irroic, "post-feminist" age, few things inspire passion. Breastfeeding is one of them. For advocates, breastfeeding is empowering, the only way to supply babies proper nutrition, and the "bond" that cements the mother/child relationship. It is also deemed "natural" in a world of genetically modified product and mal-dominated corporate health-care. But is it a realistic option for all women? And can a well-intentioned insistence on the necessity of breastfeeding become just another way for some women to feel they have failed as mothers?

What's Wrong with Fat?-Abigail Saguy 2013-01-31 The United States, we are told, is facing an obesity epidemic, a "battle of the bulge" that requires drastic and immediate action. Some have predicted that, due to increasing rates of overweight and obesity, this generation will be the first to die at a younger age than their parents. Obesity has been blamed for increasing healthcare expenditure, rising costs of airplane travel, and even global warming. How and why has obesity exploded onto the public health agenda? How does this perspective of obesity as a crisis - as well as how we assign blame and responsibility for obesity - affect how we feel about our bodies? And how does it inform how medical professionals and the general public treat visibly fat people? Drawing on interviews, statistical analyses, and experimental studies, Abigail Saguy examines the implications of understanding fatness as a medical health risk, disease, and epidemic, and how we've come to understand the issue in these terms. Saguy argues that our current fears build upon a century-old distaste for fat as a marker of moral failing and low social status. Economic, professional, and political incentives, she demonstrates, have also contributed to the social construction of obesity as a medical problem and as a public health crisis. She also shows how scientific debates over the relationship between body size and health risk take place within a larger, though often invisible, debate over whether we should understand - or frame - fatness as obesity at all. From obesity to fat acceptance, Saguy examines the various frames in which the idea of fat is viewed - and most importantly acted upon - today. Controversially, she argues that public discussions of the obesity crisis are actually creating the phenomenon that they claim to be dispassionately exploring. From the categories we use to discuss overweight and obesity, to the way we frame the crisis, we are literally making ourselves fat. Finally, *What's Wrong with Fat?* reveals the collateral damage - including the intensification of negative body image and justification of weight-based discrimination - of the war on fat.

Three Cups of Tea-Greg Mortenson 2006-03-02 The astonishing, uplifting story of a real-life Indiana Jones and his humanitarian campaign to use education to combat terrorism in the Taliban's backyard Anyone who despairs of the individual's power to change lives has to read the story of Greg Mortenson, a homeless mountaineer who, following a 1993 climb of Pakistan's treacherous K2, was inspired by a chance encounter with impoverished mountain villagers and promised to build them a school. Over the next decade he built fifty-five schools—especially for girls—that offer a balanced education in one of the most isolated and dangerous regions on earth. As it chronicles Mortenson's quest, which has brought him into conflict with both enraged Islamists and uncomprehending Americans, *Three Cups of Tea* combines adventure with a celebration of the humanitarian spirit. Hope Prevails-Dr. Michelle Bengtson 2016-08-16 Neuropsychologist Offers Hope to Those Struggling with Depression As a board-certified neuropsychologist, Dr. Michelle Bengtson sees the devastation of depression. Early on, she practiced the most effective treatments and prescribed them for her clients. But when she experienced depression herself, she found that the treatments she had recommended were lacking. Her experience showed her the missing component in treating depression. In *Hope Prevails*, Dr. Bengtson writes with deep compassion, blending her training and faith, to offer readers a hope grounded in God's love and grace. She helps readers understand what depression is, how it affects them spiritually, and what, by God's grace, it cannot do. The result is an approach that offers the hope of release, not just the management of symptoms. For those who struggle with depression and those who want to help them, *Hope Prevails* offers hope for the future.

Global Perspectives on ADHD-Meredith R. Bergey 2018-01-01 Attention deficit hyperactivity disorder (ADHD) has been a common psychiatric diagnosis in both children and adults since the 1980s and 1990s in the United States. But the diagnosis was much less common—“even unknown”—in other parts of the world. By the end of the twentieth century, this was no longer the case, and ADHD diagnosis and treatment became an increasingly widespread global phenomenon. As the diagnosis was adopted around the world, the definition and treatment of ADHD often changed in the context of different psychiatric professions, medical systems, and cultures. Global Perspectives on ADHD is the first book to examine how this expanding public health concern is diagnosed and treated in 16 different countries. In some countries, readers learn, over 10% of school-aged children and adolescents are diagnosed with ADHD; in others, that figure is less than 1%. Some countries focus on medicating children with ADHD; others emphasize parent intervention or child therapy. Showing how a medical diagnosis varies across contexts and time periods, this book explains how those distinctions shape medical interventions and guidelines, filling a much-needed gap by examining ADHD on an international scale. Healing ADD Revised Edition-Daniel G. Amen, M.D. 2013-12-03 THE NEW YORK TIMES BESTSELLER All-New Revised Edition Attention deficit disorder (ADD) is a national health crisis that continues to grow—yet it remains one of the most misunderstood and incorrectly treated illnesses today. Neuropsychiatrist Daniel G. Amen, MD was one of the first to identify that there are multiple types beyond just purely hyperactive or inattentive ADD, each requiring a different treatment. With updated recommendations for nutraceuticals and/or medications targeted to brain type, diet, exercise, lifestyle interventions, cognitive reprogramming, parenting and educational strategies, neurofeedback, and more, Dr. Amen's revolutionary approach provides a treatment program that can lead sufferers of ADD to a normal, peaceful, and fully functional life. Sufferers from ADD often say, “The harder I try, the worse it gets.” Dr. Amen tells them, for the first time, why, and more importantly how to heal ADD. From the Trade Paperback edition.

Solitary Action-Ira J. Cohen 2015-11-01 From a private nature walk to an engrossing novel, humans spend a vast amount of time engaged in solitary activities. However, despite the fact that individual activities are a prevalent part of everyday life, most scholarly research has been devoted to social interaction rather than solitary action. Ira Cohen's Solitary Action fills this intellectual void, identifying and discussing four basic forms of individual action: peripatetics, engrossments, regimens, and reflexives. Cohen explores the differences and similarities among the forms, specifically delving into the structural contrast between behaviors with rigid constraints, such as the game of solitaire, and behaviors which require creativity and spontaneity, such as a solo jazz improvisation. Lucid and relatable, Solitary Action links its arguments with examples from literature, personal narrative, and daily life, shedding light upon the understated significance of individual activities. The book concludes with a discussion of extensive retreats into solitude for religious, aesthetic, and self-restorative experiences, including examples from Thomas Merton and Henry David Thoreau. Ultimately, Cohen's findings promise to inspire new inquiries into the nature of social behavior by opening a new domain of everyday activities to the attention previously reserved for social interaction.

The Future of Nursing-Institute of Medicine 2011-02-08 The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and double the number

who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Pain Management and the Opioid Epidemic-National Academies of Sciences, Engineering, and Medicine 2017-09-28 Drug overdose, driven largely by overdose related to the use of opioids, is now the leading cause of unintentional injury death in the United States. The ongoing opioid crisis lies at the intersection of two public health challenges: reducing the burden of suffering from pain and containing the rising toll of the harms that can arise from the use of opioid medications. Chronic pain and opioid use disorder both represent complex human conditions affecting millions of Americans and causing untold disability and loss of function. In the context of the growing opioid problem, the U.S. Food and Drug Administration (FDA) launched an Opioids Action Plan in early 2016. As part of this plan, the FDA asked the National Academies of Sciences, Engineering, and Medicine to convene a committee to update the state of the science on pain research, care, and education and to identify actions the FDA and others can take to respond to the opioid epidemic, with a particular focus on informing FDA's development of a formal method for incorporating individual and societal considerations into its risk-benefit framework for opioid approval and monitoring.

We've Got Issues-Judith Warner 2010-02-23 In her provocative new book, New York Times-bestselling author Judith Warner explores the storm of debate over whether we are overdiagnosing and overmedicating our children who have "issues." In Perfect Madness: Motherhood in the Age of Anxiety, Judith Warner explained what's gone wrong with the culture of parenting, and her conclusions sparked a national debate on how women and society view motherhood. Her new book, We've Got Issues: Children and Parents in the Age of Medication, will generate the same kind of controversy, as she tackles a subject that's just as contentious and important: Are parents and physicians too quick to prescribe medication to control our children's behavior? Are we using drugs to excuse inept parents who can't raise their children properly? What Warner discovered from the extensive research and interviewing she did for this book is that passion on both sides of the issue "is ideological and only tangentially about real children," and she cuts through the jargon and hysteria to delve into a topic that for millions of parents involves one of the most important decisions they'll ever make for their child. Insightful, compelling, and deeply moving, We've Got Issues is for parents, doctors, and teachers-anyone who cares about the welfare of today's children.

transmission on young children's development and well-being (e.g., emotion self-regulation; executive functioning; maltreatment; future parenting practices). It analyzes current findings on acute and chronic psychological and socioeconomic stressors affecting parents, including those associated with poverty and cultural disparities, pregnancy and motherhood, and caring for children with developmental disabilities. Contributors explore how parental stress affects cognitive, affective, behavioral, and neurological development in children while pinpointing core adaptation, resilience, and coping skills parents need to reduce abusive and other negative behaviors and promote optimal outcomes in their children. These nuanced bidirectional perspectives on parent/child dynamics aim to inform clinical strategies and future research targeting parental stress and its cyclical impact on subsequent generations. Included in the coverage: Parental stress and child temperament. How social structure and culture shape parental strain and the well-being of parents and children. The stress of parenting children with developmental disabilities. Consequences and mechanisms of child maltreatment and the implications for parenting. How being mothered affects the development of mothering. Prenatal maternal stress and psychobiological development during childhood.
