Teaching Empathy in Healthcare-Adriana E. Foster 2019-11-18 Empathy is essential to effectively engaging patients as partners in care. Clinicians' empathy is increasingly understood as a professional competency, a mode and process of relating that can be learned and taught. Communication and empathy training are penetrating healthcare professions curricula as knowledge about the most effective modalities to train, maintain, and deepen empathy grows. This book draws on a wide range of contributors across many disciplines, and takes an evidence-based and longitudinal approach to clinical empathy education. It takes the reader on an engaging journey from understanding what empathy is (and how it can be measured), to approaches to empathy education informed by those understandings. It elaborates the benefits of embedding empathy training in graduate and post-graduate curricula and the importance of teaching empathy in accord with the clinician's stage of professional development. Finally, it examines systemic perspectives on empathy and empathy education in the clinical setting, addressing issues such as equity, stigma, and law. Each section is full of the latest evidence-based research, including, notably, the advances that have been made over recent decades in the neurobiology of empathy. Perspectives among the interdisciplinary chapters include: Neurobiology of empathy Measuring empathy in healthcare Teaching clinicians about affect Teaching cultural humility: Understanding the core of others by reflecting on ours Empathy and implicit bias: Can empathy training improve equity? Teaching Empathy in Healthcare: Building a New Core Competency takes an innovative and comprehensive approach towards a developed understanding of empathy in the clinical context. This evidence-based book is set to become a classic text on the topic of empathy in healthcare settings, and will appeal to a broad readership of clinicians, educators, and researchers in clinical medicine, neuroscience, behavioral health, and the social sciences, leaders in educational and professional organizations, and anyone interested in the healthcare services they utilize.

Learning Geriatric Medicine-Regina Roller-Wirnsberger 2018-03-20 This textbook presents hands-on training material for medical students. The style reflects the need for practice-based teaching with a modern edge in daily clinical routine; accordingly, it also employs online material and pocket cards. Each chapter begins with specific learning objectives, which are cross-referenced with the European curriculum for undergraduate medical education released by the European Union of Medical Specialists (UEMS) together with the European Union Geriatric Medicine Society (EUGMS), as well as the minimum geriatric competences for medical students established by the American Geriatrics Society (AGS). World-renowned European experts in practicing and teaching the interdisciplinary field of Geriatrics contributed to this work, with the aim of offering the new generation of health professionals a global perspective on one of the greatest public health challenges of our time: the management of the steadily increasing number of older, multimorbid, and vulnerable persons. The major strength of this book - published under the auspices of the EUGMS - is its pragmatic, goal-oriented approach, which makes it suitable for bedside learning and patient-centered medicine; further, all of the chapters are firmly based on the pillars of the ageing process in all of its biological aspects, helping readers understand the pathophysiology of and rationale behind interventions for the main geriatric syndromes and disorders.

Anesthesiology-Linda S. Aglio 2017-07-25 Divided into twelve sections that cover the entirety of anesthetic practice, this is a case-based, comprehensive review of anesthesiology that covers the basics of anesthetic management and reflects all new guidelines and recently developed standards of care. Each chapter of Anesthesiology: Clinical Case Reviews begins with a specific clinical problem or a clinical case scenario, followed by concise discussions of preoperative assessment, intraoperative management, and postoperative pain management. In addition to residents and fellows, this book is written for practicing anesthesiologists, student nurse anesthetists, and certified registered nurse anesthetists (CRNAs).

Routine Blood Results Explained 3/e-Dr Andrew Blann 2013 Now in its third edition, this essential handbook for nurses and allied health professionals gives clear, simple explanations of blood results, focusing on routinely requested investigations. There have been many changes since the second edition - from alterations in units (such as g/L for haemoglobin, rather than g/dL) to the merging of haematology with biochemistry, blood transfusion and immunology to form blood science. Accordingly, in this new edition there are more details of immunology, immunological diseases, and the blood tests involved. These changes

Clinical Neuro-Ophthalmology-Ulrich Schiefer 2007-09-11 This book covers all relevant techniques of diagnosis as well as interpretations of clinical signs in Clinical Neuro-Ophthalmology. All information is highly structured, highlighting 'definition', 'note' and 'pearl', so that it can also be used by the physician during the patient encounter. The included flow chart posters remind the physician of the most important information. This unique and practical guide offers invaluable and practical advice for physicians treating patients with neuro-ophthalmic problems.

The Well-Woman Visit-David Chelmon 2017-06-15 The book provides guidance for conducting a well-woman visit, based on the American College of Obstetricians and Gynecologists Well Woman Task Force recommendations. The scope of problems, the rationale for screening or prevention, and the factors that alter screening are explained, then the recommendations are summarized, and advice is offered on their application.

Stroke-Msn Rn Riske 2016-09-15 Do you find it scary and overwhelming to take care of someone who has suffered a brain injury? Caring for a patient who has had a stroke can be very challenging. Trust us, we have been right where you are and we know the intimidation you might feel when thinking of all the components of caring for patients with this complex diagnosis. Nursing assessment is a crucial piece of the overall puzzle that will determine how the patient is cared for and, ultimately, the outcome of the patient. From the moment a patient arrives to the hospital with stroke-like symptoms, all members of the stroke care team begin working on the patient's history, obtaining tests, drawing labs, developing a plan, implementing safety measures, carrying out time-sensitive orders, and educating the patient and the patient's family. This book is a guide for anyone new to caring for stroke patients in the hospital setting. We have used our own nursing and teaching experience to help explain how to assess, anticipate, and prevent complications, and what to expect while caring for anyone who has been admitted to the hospital for a stroke or stroke-like symptoms. Our hope is that you feel more confident while caring for and educating this patient population. Ultrasound Guided Regional Anesthesia-Stuart A. Grant 2016-09-22 Ultrasound technology is enabling anesthesiologists to perform regional anesthetic procedures with greater confidence in accuracy and precision. With improvements in visualizing neural anatomy and needle movement, ultrasound guidance improves patient safety and operating room efficiency. This book offers a detailed, stepwise approach to this technique, identifying pearls and pitfalls to ensure success. Topics are organized into four chapters. The first chapter provides the basic principles behind ultrasound guided regional anesthesia, setting a strong context for the rest of the book. The last three cover the nerve blocks: upper extremity, lower extremity, and chest, trunk and spine. Each nerve block is comprehensively explained, divided up by introduction, anatomy, clinical applications, technique, alternate techniques, complications, and pearls. This new edition includes discussions of 6 new blocks: the suprascapular block, axillary nerve block for shoulder surgery, fascia iliaca block, lateral femoral cutaneous block, and the adductor canal block. This edition also contains over 40 new procedural and imaging figures, an appendix on what blocks to perform for specific surgeries, and new information on choice of local anesthetic agent, types of catheters and practical ultrasound physics to help improve scanning. Ultrasound Guided Regional Anesthesia provides authoritative, in-depth coverage of ultrasound guided regional anesthesia for the anesthesiologist beginning to use ultrasound and makes a great reference for the more seasoned physician.

Manual of I.V. Therapeutics-Lynn Dianne Phillips 2005-01 Designed as a self-paced textbook, this guide for nurses covers the principles of I.V. therapeutics in a variety of settings, including acute, home care, clinic, and extended care units. The Hygiene Hypothesis and Darwinian Medicine-Graham A.W. Rook 2009-12-24 Man has moved rapidly from the hunter-gatherer environment to the living conditions of industrialised countries. The hygiene hypothesis suggests that the resulting reduced exposure to micro-organisms has led to disordered regulation of the immune system, and hence to increases in certain chronic inflammatory disorders, like allergic disorders, autoimmunity, inflammatory bowel disease, atherosclerosis, depression, some cancers and perhaps Alzheimer and Parkinson. This book discusses the evidence for and against in the context of Darwinian medicine, which uses knowledge of evolution to cast light on human diseases. The approach is interdisciplinary, looking at man's microbiological history, at the

Models and Frameworks for Implementing Evidence-Based Practice-Jo Rycroft-Malone 2011-09-07 The Evidence-Based Nursing Series is co-published with Sigma Theta Tau International (STTI). The series focuses on implementing evidence-based practice in nursing and mirrors the remit of Worldviews on Evidence-Based Nursing, encompassing clinical practice, administration, research and public policy. Models and Frameworks for Implementing Evidence-Based Practice: Linking Evidence to Action looks at ways of implementing evidence gained through research and factors that influence successful implementation. It acknowledges the gap that exists between obtaining evidence and the practicalities of putting it into practice and provides direction to help to close this gap. This, the first book in the series, helps the reader to make decisions about the appropriateness of using various models and frameworks. A selection of models and frameworks are examined in detail including examples of their use in practice. The book concludes with an analysis and synthesis of the included models and frameworks. The models and frameworks that have been included are based on a number of criteria: that they are internationally recognised, have undergone widespread evaluation and testing, are transferable across different settings, and can be used by different disciplines. Models and frameworks include: Stetler Model Ottawa Model of Research Use IOWA model of evidence-based practice Advancing Research and Clinical Practice through Close Collaboration (ARCC) model Dobbins' dissemination and use of research evidence for policy and practice framework Joanna Briggs Institute model Knowledge to Action framework Promoting Action on Research Implementation in Health Services (PARIHS) Key Points: Includes an overview of implementation issues and the use of theory and frameworks in implementing evidence into practice Chapters are written by the developers of the model or framework Each chapter provides background on an implementation model or framework, suitable applications, underlying theory and examples of use Each chapter examines strengths and weaknesses of each model alongside barriers and facilitators for its implementation

Pain-Marni Jackson 2012-03-01 Why is pain so poorly understood? Why do we still distinguish between mental pain and physical pain, when pain is always an emotional experience? How can it be that science is about to clone a human being but still can't cure the pain of a bad back? If pain is the reason why most people visit the doctor, why are most doctors so bad at addressing the problem of suffering? Marni Jackson's PAIN: THE FIFTH VITAL SIGN is a witty, personal and groundbreaking inquiry into the nature, treatment and definition of human pain, one of the most misunderstood and elusive subjects to challenge humankind. In the questing and narrative manner of Oliver Sacks, Jackson takes us back into the history of pain and forward into the possibilities of pain genetics, Jackson brings us stories both of people in pain and the pain pioneers: eccentrics and artists, wrestlers and writers, psychologists and philosophers, nurses and doctors. Above all, Pain makes an elusive subject vivid and readable. We all know what pain is. Now Marni Jackson has given it a voice.
