Firemon-Duncan C. Lutes 2012-10-19 Monitoring and inventory to assess the effects of wildland fire is critical for 1) documenting fire effects, 2) assessing ecosystem damage and benefit, 3) evaluating the success or failure of a burn, and 4) appraising the potential for future treatments. However, monitoring fire effects is often difficult because data collection requires abundant funds, resources, and sampling experience. Often, the reason fire monitoring projects are not implemented is because fire management agencies do not have scientifically based, standardized protocols for inventorying pre- and post-fire conditions that satisfy their monitoring and management objectives. We have developed a comprehensive system, called the Fire Effects Monitoring and Inventory System (FIREMON), which is designed to satisfy fire management agencies' monitoring and inventory requirements for most ecosystems, fuel types, and geographic areas in the United States. FIREMON consists of standardized sampling methods and manuals, field forms, database, analysis program, and an image analysis guide so that fire managers can 1) design a fire effects monitoring project, 2) collect and store the sampled data, 3) statistically analyze and summarize the data, 4) link the data with satellite imagery, and 5) map the sampled data across the landscape using image processing. FIREMON allows flexible but comprehensive sampling of fire effects so data can be evaluated for significant impacts, shared across agencies, and used to update and refine fire management plans and prescriptions. The key to successful implementation of FIREMON requires the fire manager to succinctly state the objectives of the proposed fire monitoring project and accurately determine the available monitoring or inventory project resources. Using this information, the manager uses a series of FIREMON keys to decide the sampling strategy, methods, and intensity needed to accomplish the objectives with the resources on hand. Next, the necessary sampling equipment is gathered and dispersed to sampling crews. Field crews then collect FIREMON data using the detailed methods described in this FIREMON documentation. Collected data are then entered into a Microsoft(r) Access database. These data can be summarized, analyzed, and evaluated using the set of integrated programs developed specifically for FIREMON. FIREMON has a flexible structure that allows the modification of sampling methods and local code fields to allow the sampling of locally important fire effects evaluation criteria.

Using Inertial Sensors for Position and Orientation Estimation-Manon Kok 2018-01-31 Microelectromechanical system (MEMS) inertial sensors have become ubiquitous in modern society. Built into mobile telephones, gaming consoles, virtual reality headsets, we use such sensors on a daily basis. They also have applications in medical therapy devices, motion-capture filming, traffic monitoring systems, and drones. While providing accurate measurements over short time scales, this diminishes over longer periods. To date, this problem has been resolved by combining them with additional sensors and models. This adds both expense and size to the devices. This tutorial focuses on the signal processing aspects of position and orientation estimation using inertial sensors. It discusses different modelling choices and a selected number of important algorithms that engineers can use to select the best options for their designs. The algorithms include optimization-based smoothing and filtering as well as computationally cheaper extended Kalman filter and complementary filter implementations.

Engineers, researchers, and students deploying MEMS inertial sensors will find that this tutorial is an essential monograph on how to optimize their designs. A-Z of Italian Motorcycle Manufacturers-Greg Pullen 2018-10-23 Italian motorcycles have a place in history - and many enthusiasts' hearts - out of all proportion to the numbers that have been built. From Moto Guzzi becoming the first non-British marque to win a TT through to Ducati's achievements in MotoGP, they have also been at the forefront of motorsport despite being far smaller than, at first, the British and later the Japanese manufacturers. If the number of motorcycles built by Italian manufacturers is small, the sheer number of Italian motorcycle factories will surprise readers. Almost 600 marques were identified in researching this book, and there may have been thousands. This is partly because there were so many engines available off the shelf - many of them English - as well as a thriving accessory and component industry. A-Z of Italian Motorcycle Manufacturers only deals briefly with the grand marques Ducati and Moto Guzzi because there have been many dedicated books about them. Instead this is a definitive guide to the factories that have been less widely covered or, in most cases, never before in the English language. Some, such as Bianchi and Garelli, might be familiar: others, remembered for their racing achievements or uniqueness, such as Morbidelli, and many you may have never heard of. But if it was possible to establish when and where the factories were active, and at least a little about the motorcycles they built, then there is an entry for them. An appendix lists the other manufacturers that are lesser known, making this the most complete reference book of Italian motorcycles available today. This book is a complete guide to Italian motorcycle manufacturers, and an essential reference for anyone with an interest in these fascinating vehicles. Tropical Ecosystems: Structure, Functions and Challenges in the Face of Global Change-Satish Chandra Garkoti 2019-09-24 The book brings together research topics having a broad focus on human and climate change impacts on the terrestrial ecosystems in the tropics in general and more specifically from the most significant and vulnerable Himalayan ecosystem. A total of 16 contributions included in the book cover a diverse range of global change themes such as the impacts of changing temperature and precipitation on soil ecosystems, forest degradation, extent and impacts of invasive species, plant responses to pollution, climate change impacts on biodiversity and tree phenology, environmental changes associated with land use, importance of traditional knowledge in climate change adaptation, timberline ecosystems, and role of integrated landscape modeling for sustainable management of natural resources. The book is a collective endeavour of an international multidisciplinary group of scientists focused on improving our understanding of the impacts of global change on the structure and functioning of tropical ecosystems and addressing the challenges of their future sustainable management. We hope that the book will help researchers working in the areas of ecology and environmental science to update their knowledge. We also expect that natural resource managers and policy planners will find explanations for some of their observations and hypotheses on multiple global change factors impacting tropical ecosystems and especially Himalayan

ecosystems.

Legendary Motorcycles-Basem Wasef, Jay Leno Motorcycles are mythic, far more than mere transportation, but some are in a class of their own, truly legendary machines. There are the Triumphs: James Dean's, Marlon Brando's in *The Wild Ones*, the one Steve McQueen took over the fence in *The Great Escape*. There are Evel Knievel's and Elvis's Harleys, the Easy Rider Stars 'n' Stripes bike, and T. E. Lawrence's Brough Superior SS100; Von Dutch's Condor, Craig Vetter's Mystery Ship, and Mike Hailwood's Honda RC162. These are just some of the machines that have made motorcycle history, and that make this book a feast for the eyes and a fact-filled odyssey for the motorcycle aficionado. Illustrated with commissioned photographs and historical images, the book profiles the bikes--not just the models but the actual motorcycles--that have achieved legendary status in the last century. Their stories, told here in detail for the first time, make up the story of the motorcycle in American culture. See Motorbooks author Basem Wasef interviewed by Jay Leno on JayLenosGarage.com:

Biomedical Engineering and its Applications in Healthcare-Sudip Paul 2019-11-08 This book illustrates the significance of biomedical engineering in modern healthcare systems. Biomedical engineering plays an important role in a range of areas, from diagnosis and analysis to treatment and recovery and has entered the public consciousness through the proliferation of implantable medical devices, such as pacemakers and artificial hips, as well as the more futuristic technologies such as stem cell engineering and 3-D printing of biological organs. Starting with an introduction to biomedical engineering, the book then discusses various tools and techniques for medical diagnostics and treatment and recent advances. It also provides comprehensive and integrated information on rehabilitation engineering, including the design of artificial body parts, and the underlying principles, and standards. It also presents a conceptual framework to clarify the relationship between ethical policies in medical practice and philosophical moral reasoning. Lastly, the book highlights a number of challenges associated with modern healthcare technologies.

Lake Pavin-Télesphore Sime-Ngando 2016-10-31 This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology.

Mobile Unleashed-Don Dingee 2015-12-08 This is the origin story of technology super heroes: the creators and founders of ARM, the company that is responsible for the processors found inside 95% of the world's mobile devices today. This is also the evolution story of how three companies - Apple, Samsung, and Qualcomm - put ARM technology in the hands of billions of people through smartphones, tablets, music players, and more. It was anything but a straight line from idea to success for ARM. The story starts with the triumph of BBC Micro engineers Steve Furber and Sophie Wilson, who make the audacious decision to design their own microprocessor - and it works the first time. The question becomes, how to sell it? Part I follows ARM as its founders launch their own company, select a new leader, a new strategy, and find themselves partnered with Apple, TI, Nokia, and other companies just as digital technology starts to unleash mobile devices. ARM grows rapidly, even as other semiconductor firms struggle in the dot com meltdown, and establishes itself as a standard for embedded RISC processors. Apple aficionados will find the opening of Part II of interest the moment Steve Jobs returns and changes the direction toward fulfilling consumer dreams. Samsung devotees will see how that firm evolved from its earliest days in consumer electronics and semiconductors through a philosophical shift to innovation. Qualcomm followers will learn much of their history as it plays out from satellite communications to development of a mobile phone standard and emergence as a leading fabless semiconductor company. If ARM could be summarized in one word, it would be "collaboration." Throughout this story, from Foreword to Epilogue, efforts to develop an ecosystem are highlighted. Familiar names such as Google, Intel, Mediatek, Microsoft, Motorola, TSMC, and others are interwoven throughout. The evolution of ARM's first 25 years as a company wraps up with a shift to its next strategy: the Internet of Things, the ultimate connector for people and devices. Research for this story is extensive, simplifying a complex mobile industry timeline and uncovering critical points where ARM and other companies made fateful and sometimes surprising decisions. Rare photos, summary diagrams and tables, and unique perspectives from insiders add insight to this important telling of technology history.

Ecological Management of Pine Forests- 2019-01-24 Natural pine forests characterize many landscapes preserved over time, either as a result of a specific forest management practice or a disturbance. In the event of a lack of management over a long period of time, these formations could evolve with increasingly chaotic structures towards other formations. This process can lead to landscape change, the spread of insects and pathogens, and the risk of fires and watercourse obstruction. Pine forest plantations should be considered as transient tree populations, destined to evolve into more complex and stable formations. However, sometimes they should be preserved for their cultural value. Careful management of these forests also takes into account the close relationship between forest and human settlements. As a first step, ecological management assumes the definition of these two macro types. These approaches include the application of integrated methods for determining the reference conditions of the main functional and structural ecosystem components of forests. The reference conditions are the historical (or natural) variability range of ecological structures and processes, reflecting the recent evolution and dynamic interaction of biotic and abiotic conditions and patterns of disturbance. These conditions form the basis for comparison with contemporary ecosystem processes and structures and are a frame of reference for designing ecological restoration treatments and conservation plans. The productive aspects must not be overlooked; rather, they have to be considered, planned, and managed with a perspective of sustainability and ecosystem functionality. This should be considered for a common approach to forest management, for a forest rehabilitation, and for forest restoration activities.

Shahid 2013-01-15 The papers assembled here cover topics such as technological advances in soil salinity mapping and monitoring, management and reclamation of salt-affected soils, use of marginal quality water for crop production, salt-tolerance mechanisms in plants, biosaline agriculture and agroforestry, microbiological interventions for marginal soils, opportunities and challenges in using marginal waters, and soil and water management in irrigated agriculture.

The Two Faces of Islam-Stephen Schwartz 2003-09-09 Since its formation in 1932, Saudi Arabia has been ruled by two interdependent families. The Al Sa'uds control politics and the descendants of Ibn Abd al-Wahhab impose Wahhabism—a violent, fanatical perversion of the pluralistic Islam practiced by most Muslims. Stephen Schwartz argues that Wahhabism, vigorously exported with the help of Saudi oil money, is what incites Palestinian suicide bombers, Osama

bin Laden, and other Islamic terrorists throughout the world. Schwartz reveals the hypocrisy of the Saudi regime, whose moderate facade conceals state-sponsored repression and terrorism. He also raises troubling questions about Wahhabi infiltration of America's Islamic community and about U.S. oil companies sanitizing Saudi Arabia's image for the West. This sharp analysis and eye-opening expose illuminates the background to the September 11th terrorist attacks and offers new approaches for U.S. policy toward its closest ally in the Middle East.

Fighter Pilot-Christina Olds 2010-04-13 Please note: This ebook edition does not include the photo insert from the print edition. The widely anticipated memoir of legendary ace American fighter pilot, Robin Olds Robin Olds was a larger-than-life hero with a towering personality. A graduate of West Point and an inductee in the National College Football Hall of Fame for his All-American performance for Army, Olds was one of the toughest college football players at the time. In WWII, Olds quickly became a top fighter pilot and squadron commander by the age of 22—and an ace with 12 aerial victories. But it was in Vietnam where the man became a legend. He arrived in 1966 to find a dejected group of pilots and motivated them by placing himself on the flight schedule under officers junior to himself, then challenging them to train him properly because he would soon be leading them. Proving he wasn't a WWII retread, he led the wing with aggressiveness, scoring another four confirmed kills, becoming a rare triple ace. Olds (who retired a brigadier general and died in 2007) was a unique individual whose personal story is one of the most eagerly anticipated military books of the year.

Advances in Remote Sensing and Geo Informatics Applications-Hesham M. El-Askary 2018-12-29 This edited volume is based on the best papers accepted for presentation during the 1st Springer Conference of the Arabian Journal of Geosciences (CAJG-1), Tunisia 2018. The book compiles a wide range of topics addressing various issues by experienced researchers mainly from research institutes in the Mediterranean, MENA region, North America and Asia. Remote sensing observations can close gaps in information scarcity by complementing ground-based sparse data. Spatial, spectral, temporal and radiometric characteristics of satellites sensors are most suitable for features identification. The local to global nature and broad spatial scale of remote sensing with the wide range of spectral coverage are essential characteristics, which make satellites an ideal platform for mapping, observation, monitoring, assessing and providing necessary mitigation measures and control for different related Earth's systems processes. Main topics in this book include: Geo-informatics Applications, Land Use / Land Cover Mapping and Change Detection, Emerging Remote Sensing Applications, Rock Formations / Soil Lithology Mapping, Vegetation Mapping Impact and Assessment, Natural Hazards Mapping and Assessment, Ground Water Mapping and Assessment, Coastal Management of Marine Environment and Atmospheric Sensing.

Rantoul and Chanute Air Force Base-Mark D. Hanson 2011-04-18 Rantoul and the former Chanute Air Force Base are inseparably intertwined as primary players in a single historical narrative. Rantoul was first founded as an agriculturally based community in 1848 near an area known as Mink Grove. The settlement boomed with the coming of the Illinois Central Railroad in 1854; a railroad championed by the town's namesake, Robert Rantoul Jr. Disaster followed in 1899 and again in 1901 with devastating fires. Then, in 1917, a U.S. Army flying field was built on the outskirts of Rantoul. Named after the aviation pioneer Octave Chanute, Chanute Field, later Chanute Air Force Base, became a premier technical training facility. A mutually beneficial relationship quickly developed between these civilian and military establishments that would last for over 75 years. Chanute Air Force Base closed in 1993, ushering in yet another new era for the village of Rantoul.

Understanding Driving-John A. Groeger 2013-02-01 This book closely examines what is involved in driving. It identifies the aspects of perception, attention, learning, memory, decision making and action control which are drawn upon in order to enable us to drive, and the brain systems involved. It attempts to show how studying tasks such as driving can help to understand how these fundamental aspects of cognition combine to facilitate performance in complex everyday

tasks. In doing so it shows how a very broad range of laboratory based findings can be applied, and that through our attempts to apply this knowledge to complex everyday tasks, we gain, in return, a greater understanding of fundamental aspects of human cognition.
