Running for Mortals-John Bingham 2007-05-01 The authors of Marathoning for Mortals - John "The Penguin" Bingham and Coach Jenny Hadfield, MA, CPT - now show beginning runners how to fit running

into their lifestyle easily You don't have to run fast or competitively to reap the rewards that running has to offer. What you do need is the courage to start. That is the "Penguin mantra" that has enabled John Bingham—through his best-selling book *No Need for Speed*, his popular monthly column for *Runner's World* magazine, and his many appearances at major running events throughout the year—to inspire thousands of men and women to take up the sport for fitness and the sheer enjoyment that running brings them. By teaming up with coach Jenny Hadfield, his wife and coauthor on *Marathoning for Mortals*, Bingham lays out strategies that will help readers to safely and effortlessly integrate runs into their busy schedules. In this book, backed by *Runner's World*, the authority of America's leading running magazine, the authors provide tips for getting started, sticking to a routine, eating for energy, hydration, and training for speed and endurance.

Run to the Finish-Amanda Brooks 2020-03-03 Inspiration and practical tips for runners who prioritize enjoyment over pace and embrace their place as an "average" runner In her first book, popular runner blogger Amanda Brooks lays out the path to finding greater fulfillment in running for those who consider themselves "middle of the pack runners" -- they're not trying to win Boston (or even qualify for Boston); they just want to get strong and stay injury-free so they can continue to enjoy running. *Run to the Finish* is not your typical running book. While it is filled with useful strategic training advice throughout, at its core, it is about embracing your place in the middle of the pack with humor and learning to love the run you've got without comparing yourself to other runners. Mixing practical advice like understanding the discomfort vs. pain, the mental side of running, and movements to treat the most common injuries with more playful elements such as "Favorite hilarious marathon signs" and "Weird Thoughts We all Have at the Start Line," Brooks is the down-to-earth, inspiring guide for everyone who wants to be happier with their run.

Smart Marathon Training-Jeff Horowitz 2011-10-01 Old-school marathon training plans ask runners to crank out 70 to 100 miles a week. It's no wonder those who make it to the start line are running ragged. *Smart Marathon Training* maps out a healthier, more economical approach to training that emphasizes quality over quantity. This innovative program eliminates junk miles, paring down training to three essential runs per week and adding a dynamic strength and cross-training program to build overall fitness. Runners will train for their best performance in less time and avoid the injuries, overtraining, and burnout that come from running too much. *Smart Marathon Training* builds up a runner's body to resist injury. Runners gain the strength they need to run long using functional exercises that target the hips, glutes, and quads. Running is a full-body sport, so this training program also builds a strong core and upper body to avoid injuries that begin above the waist. No one fakes a marathon or half-marathon--everyone has to do the work. But *Smart Marathon Training* replaces long, grinding miles with low-impact cross-training. Horowitz outlines a cycling plan to complement run workouts, boosting base fitness while saving runners' bodies for their best runs. With more than 75 detailed exercises plus six easy-to-follow training plans for half- and full marathons, *Smart Marathon Training* will get you to the start line feeling refreshed and ready to run your best race yet.

Running Rewired-Jay Dicharry 2018-02-01 In *Running Rewired*, America's leading endurance sports physical therapist and coach shares a program for runners to become stronger, faster, and more durable.

Jay Dicharry distills cutting-edge biomechanical research into 15 workouts any runner can slot into their training program to begin seeing real results in about 6 weeks. For better or worse, your body drives your running form. *Running Rewired* will show you how to shed old injuries, mobility problems, weaknesses and imbalances and rewire your body-brain movement patterns. You'll rebuild your movement and transform your running within one season. Through his work with athletes at REP Lab and top university sports performance clinics, Dicharry has found that strength training alone is inadequate for runners. To develop the four essential movement skills required for faster, safer running, runners must practice better movement as they build strength. In *Running Rewired*, you'll use

- 11 self-tests for joint mobility, posture stability, rotation, and alignment
- 83 exercises to fix blocks, move with precision, build strength, and improve power
- 15 rewire workouts to amplify any training plan from 5K to ultramarathon

Dicharry's *Running Rewired* combines the best of real-world coaching and a physical therapy approach to strength and mobility for better running. You'll find your personal best running form and become a faster, more durable runner.

Strength and Conditioning for Endurance Running-Richard Blagrove 2015-07 Endurance runners and coaches have tended to neglect weight training and conditioning techniques, often in the belief that they don't benefit performance, add unwanted muscle bulk, or cause excessive soreness. But as standards at elite level have improved, so coaches and runners have become increasingly keen on learning about the latest new training techniques or ways to stay injury free. No longer does the running community view strength and conditioning with scepticism, or as something that can only benefit elite runners. In *Strength and Conditioning for Endurance Running*, author Richard Blagrove shows how a strength and conditioning programme can directly improve running performance and reduce the risk of injury, as well as allowing an athlete to tolerate high volumes of running in the future.

Marathon Training and Distance Running Tips-James Atkinson 2014-08-13 Long distance running is much like any other fitness training. If you want to improve, you need a good plan that has a progressive nature. If you are new to this game, you need a solid foundation to build on. Having a running program is not the only thing that you need. Sound advice and running tips should be taken from someone who has "walked the walk" Or in this case; "Ran the run" Hi, my name is James Atkinson from jimshealthandmuscle.com. I'm a qualified fitness coach / personal trainer and I have a fair bit of running advice that I would like to share with you. When I was around 18 years old, I was a terrible runner! In fact, I failed the basic fitness test for army entrance on running alone, and I failed big time! Several years later, I was clearing 1.5 mile running circuits in 8 minutes and 22 seconds and could easily run a marathon any day of the week! I would like to share my knowledge and training experiences with you. If you are a beginner when it comes to running, this information will no doubt give you advice that will probably not have even crossed your mind before. If you are already a runner and are looking to make more progression, you are also in the right place. I know that it is easy to get stuck on a training plateau, so I have also added some information and training methods to this book that will help you leave the plateau behind. Some of the chapters include: Why should you take my advice? My story... Accountability, Commit To Your Goal! Where to start Running style Breathing When to eat, what to eat Your bread and butter training "Steady state" Training on a track Running for time Running for distance Running with weight Dealing with blisters and chaffing Staying injury free Putting it all together and your training plan All of the information that I provide is written from my own experience as a long distance runner. I believe that by learning from my mistakes and my advice, you will hit your goals a lot quicker than making these mistakes yourself. Believe me; some of these mistakes can be very painful! As you will soon find out from some of the anecdotes that I am about to share with you. So grab your running shoes and let's get started! All the best James Atkinson.

Endure-Alex Hutchinson 2018-02-06 THE NEW YORK TIMES BESTSELLER • Foreword by Malcolm Gladwell Limits are an illusion: discover the revolutionary account of the science and psychology of endurance, revealing the secrets of reaching the hidden extra potential within us all. "A voyage to the outer reaches of human capacity." —David Epstein, author of Range "Reveals how we can all surpass our perceived physical limits." —Adam Grant The capacity to endure is the key trait that underlies great performance in virtually every field. But what if we all can go farther, push harder, and achieve more than we think we're capable of? Blending cutting-edge science and gripping storytelling in the spirit of Malcolm Gladwell—who contributes the book's foreword—award-winning journalist Alex Hutchinson reveals that a wave of paradigm-altering research over the past decade suggests the seemingly physical barriers you encounter as set as much by your brain as by your body. This means the mind is the new frontier of endurance—and that the horizons of performance are much more elastic than we once thought. But, of course, it's not "all in your head." For each of the physical limits that Hutchinson explores—pain, muscle, oxygen, heat, thirst, fuel—he carefully disentangles the delicate interplay of mind and body by telling the riveting stories of men and women who've pushed their own limits in extraordinary ways. The longtime "Sweat Science" columnist for Outside and Runner's World, Hutchinson, a former national-team long-distance runner and Cambridge-trained physicist, was one of only two reporters granted access to Nike's top-secret training project to break the two-hour marathon barrier, an extreme quest he traces throughout the book. But the lessons he draws from shadowing elite athletes and from traveling to high-tech labs around the world are surprisingly universal. Endurance, Hutchinson writes, is "the struggle to continue against a mounting desire to stop"—and we're always capable of pushing a little farther.
