Trucking Business Management: Cases and Concepts-Debit Roy The trucking business in India deserves special attention. It is estimated that about 8 million goods vehicles ply on Indian roads, out of which about 25 per cent are heavy commercial vehicles (with a load capacity of 7.5 tonnes and above). More than 75 per cent of the trucks are owned by fleet operators with a fleet size of five or less. Fleet operators are mostly family-run businesses and hence they evolve with the ideologies and business principles of the family. Such evolution has led to varying business practices and levels of technology adoption. Decisions were not taken in line with modern business practices. Another trend was the relative reluctance of the next generation of these families to join their family business due to the perception that the trucking business was less appealing vis-à-vis the other options that they had after higher education. To fill this widening business-practice gap and in an attempt to impart a professional approach towards enabling the trucking business to grow, the Mahindra Truck and Bus Division (MTBD) partnered with the Indian Institute of Management (IIM) Ahmedabad to impart management education to the next generation transporters in trucking business. This youth transport Management Development Program (MDP) was called MPOWER, signifying youth transporter empowerment. Typically, a second-generation transport entrepreneur (son and daughter of a transporter/truck fleet owner) in the age group 21 to 40 years was targeted to be a participant for the MDP. Most of the participants were well educated (many of them had obtained degrees from foreign universities), ambitious and progressive, keen to be the change agents in the road transport ecosystem, innovative, and technology savvy. They shared a common vision, which was to professionalize their family business and take it to the next level. In this book, we include teaching cases based on real-life transport business situations that highlight some of the above-mentioned issues. Through these cases, the reader would be able to appreciate the decisions in the transport business, the challenges that are faced, and use appropriate decision tools to develop solutions. We include a collection of two chapters and 12 cases. The first chapter discusses the significance and structure of the trucking business. The second chapter highlights the HR practices in the trucking business particularly related to driver management. The 12 cases have been developed with close cooperation from several transport companies such as Agarwal Packers and Movers Limited, Navigators Logistics Company Private Limited, Shreeji Transport Services Private Limited, KM Trans Logistics, and Instant Transport Solution Private Limited. There are other companies whose names have been disguised to protect their identity. Apart from the new cases, we have consciously decided to include a few cases of earlier vintage, since the issues raised and the analytical approach adopted continue to be valid.

Production Planning by Mixed Integer Programming-Yves Pochet 2006-04-19 This textbook provides a comprehensive modeling, reformulation and optimization approach for solving production planning and supply chain planning problems, covering topics from a basic introduction to planning systems, mixed integer programming (MIP) models and algorithms through the advanced description of mathematical results in polyhedral combinatorics required to solve these problems. Based on twenty years worth of research in which the authors have played a significant role, the book addresses real life industrial production planning problems (involving complex production structures with multiple production stages) using MIP modeling and reformulation approach. The book provides an introduction to MIP modeling and to planning systems, a unique collection of reformulation results, and an easy to use problem-solving library. This approach is demonstrated through a series of real life case studies, exercises and detailed illustrations. Review by Jakub Marecek (Computer Journal) The emphasis put on mixed integer rounding and mixing sets, heuristics in-built in general purpose integer programming solvers, as well as on decompositions and heuristics using integer programming should be praised.. There is no doubt that this volume offers the present best introduction to integer programming formulations of lotsizing problems, encountered in production planning. (2007)

In particular, the authors attempt to convey the intuition behind many key supply chain concepts and to provide simple techniques that can be used to analyze various aspects of the supply chain. Topical coverage reflects the authors' desire to introduce students to those aspects of supply chain management that are critical to the success of a business. Although many essential supply chain management issues are interrelated, the authors strive to make each chapter as self-contained as possible, so that the reader can refer directly to chapters covering topics of interest. Each chapter utilizes numerous case studies and examples, and mathematical and technical sections can be skipped without loss of continuity. The 3rd edition represents a substantial revision. While the structure and philosophy were kept intact, the authors placed an increasing importance on finding or developing effective frameworks that illustrate many important supply chain issues. At the same time, motivated by new developments in industry, they added material on a variety of topics new to the book while increasing the coverage of others.
