Systems Practices for the Care of Socially At-Risk Populations-National Academies of Sciences, Engineering, and Medicine 2016-05-07 The Centers for Medicare & Medicaid Services (CMS) have been moving from volume-based, fee-for-service payment to value-based payment (VBP), which aims to improve health care quality, health outcomes, and patient care experiences, while also controlling costs. Since the passage of the Patient Protection and Affordable Care Act of 2010, CMS has implemented a variety of VBP strategies, including incentive programs and risk-based alternative payment models. Early evidence from these programs raised concerns about potential unintended consequences for health equity. Specifically,

emerging evidence suggests that providers disproportionately serving patients with social risk factors for poor health outcomes (e.g., individuals with low socioeconomic position, racial and ethnic minorities, gender and sexual minorities, socially isolated persons, and individuals residing in disadvantaged neighborhoods) may be more likely to fare poorly on quality rankings and to receive financial penalties, and less likely to receive financial rewards. The drivers of these disparities are poorly understood, and differences in interpretation have led to divergent concerns about the potential effect of VBP on health equity. Some suggest that underlying differences in patient characteristics that are out of the control of providers lead to differences in health outcomes. At the same time, others are concerned that differences in outcomes between providers serving socially at-risk populations and providers serving the general population reflect disparities in the provision of health care. Systems Practices for the Care of Socially At-Risk Populations seeks to better distinguish the drivers of variations in performance among providers disproportionately serving socially at-risk populations and identifies methods to account for social risk factors in Medicare payment programs. This report identifies best practices of high-performing hospitals, health plans, and other providers that serve disproportionately higher shares of socioeconomically disadvantaged populations and compares those best practices of low-performing providers serving similar patient populations. It is the second in a series of five brief reports that aim to inform the Office of the Assistant Secretary of Planning and Evaluation (ASPE) analyses that account for social risk factors in Medicare payment programs mandated through the Improving Medicare Post-Acute Care Transformation (IMPACT) Act.

Assessing Patient Safety Practices and Outcomes in the U.S. Health Care System-Donna O. Farley 2009-09-02 Presents the results of a two-year study that analyzes how patient safety practices are being adopted by U.S. health care providers, examines hospital experiences with a patient safety culture survey, and assesses patient safety outcomes trends. In case studies of four U.S. communities, researchers collected information on the dynamics of local patient safety activities and on adoption of safe practices by

hospitals.

Transforming Health Care Scheduling and Access-Institute of Medicine 2015-08-24 According to Transforming Health Care Scheduling and Access, long waits for treatment are a function of the disjointed manner in which most health systems have evolved to accommodate the needs and the desires of doctors and administrators, rather than those of patients. The result is a health care system that deploys its most valuable resource--highly trained personnel--inefficiently, leading to an unnecessary imbalance between the demand for appointments and the supply of open appointments. This study makes the case that by using the techniques of systems engineering, new approaches to management, and increased patient and family involvement, the current health care system can move forward to one with greater focus on the preferences of patients to provide convenient, efficient, and excellent health care without the need for costly investment. Transforming Health Care Scheduling and Access identifies best practices for making significant improvements in access and system-level change. This report makes recommendations for principles and practices to improve access by promoting efficient scheduling. This study will be a valuable resource for practitioners to progress toward a more patient-focused "How can we help you today?" culture.

The Learning Healthcare System-Institute of Medicine 2007-06-01 As our nation enters a new era of medical science that offers the real prospect of personalized health care, we will be confronted by an increasingly complex array of health care options and decisions. The Learning Healthcare System considers how health care is structured to develop and to apply evidence--from health profession training and infrastructure development to advances in research methodology, patient engagement, payment schemes, and measurement--and highlights opportunities for the creation of a sustainable learning health care system that gets the right care to people when they need it and then captures the results for improvement. This book will be of primary interest to hospital and insurance industry administrators, health care providers, those who train and educate health workers, researchers, and policymakers. The

Learning Healthcare System is the first in a series that will focus on issues important to improving the development and application of evidence in health care decision making. The Roundtable on Evidence-Based Medicine serves as a neutral venue for cooperative work among key stakeholders on several dimensions: to help transform the availability and use of the best evidence for the collaborative health care choices of each patient and provider; to drive the process of discovery as a natural outgrowth of patient care; and, ultimately, to ensure innovation, quality, safety, and value in health care.

Specific issues discussed include Gastroenterologists and Accountable Care Organizations; Health Information Technology and the Gastroenterologist; Transitioning from Fellowship to Practice 2012; Going Big in Private Practice; Clinical Service Line Management; The Impact of Health Reform on GI Reimbursement; The Impact of Health Care Reform on Innovation and New Technology; Industry and Gastroenterology: A New World; and Demonstrating Value: Registries and Beyond.

Systems Practices As Common Sense-Walter Sobkiw 2020-02-12 On July 16, 1945 the first nuclear bomb was detonated at White Sands Proving Ground in New Mexico. The Trinity nuclear test forever changed the world. There were massive developments that arose from this huge event like Interstate Freeways and the Semi Automatic Ground Environment (SAGE). Additionally Systems Engineering emerged. It was matured and honed to such a level that many in the field started to view it as common sense.

Unfortunately what might be considered common sense or just training from one perspective might be viewed as significant knowledge and education from another perspective. This knowledge was captured in the complex collection of for profit companies, non-profit companies, think tanks, and national labs. Now

we are faced with the dilemma that many of these institutions have disappeared and many of the practitioners have died. This book is an attempt to capture some of this knowledge and pass it to the next generation. - Second Edition.

Self-Care Science, Nursing Theory and Evidence-Based Practice-Katherine Renpenning, MScN 2011-05-20
"This is an excellent review of the development of self-care deficit theory and the use of self-care in nursing practice. Explanations of the various theories and theory terms are well done and written at a level that novice theorists can relate to. The authors demonstrate how self-care science can be fiscally and effectively applied to the care of patients/clients."--Doody's Medical Reviews
Dorothea Orem's Self-Care Theory has been used as a foundation for nursing practice in healthcare institutions and as the basis of curricula in nursing schools for decades. This book explores the high-level theory of the application of Orem's Self-Care Theory, and how it can improve patient outcomes as well as cost-effectiveness of nursing care delivery. Written for nursing theorists, researchers, administrators, and graduate students, the text addresses the relationship of self-care theory and evidence-based care in nursing, and provides a solution to improving contemporary healthcare outcomes. The book is divided into three sections. Section one discusses the reason for the existence of the nursing profession, and identifies the performance of self-care. Section two covers three nursing practice sciences-wholly compensatory nursing, partly compensatory nursing, and supportive educative nursing. Section three offer suggestions on how health care organizations can incorporate this broadened perspective of what constitutes evidence based practice and on-going research methodology into every-day delivery of nursing services. Key Features: Includes case examples to illustrate the application of theory to nursing practice Provides a current, cost-effective resource for implementing Orem's Self-Care Deficit Theory for effective evidence-based practice Builds the link between the application of Orem's Self Care Theory and improved patient and fiscal healthcare outcomes

The Practice of Integrative Medicine-Michael H. Cohen, JD, MBA 2006-11-17 Successfully Incorporate Integrative Medicine in a Wide Variety of Settings Practitioners, facilities, and researchers encounter repeated requests from patients regarding the use of complementary and integrative medicine (CIM) and there are few who do not know the benefits of its use. But the legal aspects of prescribing or denying CIM treatment are new and harder to navigate, requiring the guidance of lawyers, policy makers, and other practitioners. Based on interviews with over 20 health care providers and facilities who have successfully combined integrative medicine in their practices, this book outlines the pitfalls, legal road-blocks, and benefits of bringing complementary and integrative medicine into daily health care routines. Quality Caring in Nursing and Health Systems-Joanne R. Duffy, PhD, RN, FAAN 2013-04-23 First Edition named an AJN Book of the Year! Joanne Duffy makes a compelling argument in this book that relationships have been marginalized and no longer serve as the central organizing principle of health services. This book resonates with a virtual groundswell of findings regarding the importance of relationships for organizational performance and for human wellbeing. Jody Hoffer Gittel Professor of Management, Brandeis University This edition stresses the proven need for a return to the patient-centered care neglected through our health system's emphasis on procedures, protocols, diagnostic testing, technology, and costs. It addresses the significant challenges to quality care posed by the upcoming changes in our health care system, and focuses on health systems, the role of nursing within them, and the interprofessional health team as the key to change ensuring high quality care. The book responds to the Patient Protection and Affordable Care Act's focus on accountable care organizations, the recent IOM's Future of Nursing Report, the call for radical transformation of nursing education, and current evidence on patient safety and quality of care. This text explores the Quality-Caring Model®, which honors nursing's most deeply felt value, and can be applied to clinical, educational, and leadership practice to advance our nation's health system. Among the book's strengths are its translation of theoretical knowledge to practical applications that can be used for clinical interventions and resolution of professional issues. Chapters include key terms, case studies along with practical exercises and references, and "Calls to Action" offering inspiration and guidance for implementing change. New to the Second Edition: Focuses on current challenges to quality care posed by upcoming changes to our health system Addresses health systems, the interprofessional health team, and the role of nursing within them Combines theoretical foundations for practice with clinical, leadership, and educational applications

Examines the powerful role of relationships in promoting nursing excellence, improving patient satisfaction, and patient outcomes Serves as a key guide for graduate nurse educators and students, nurse leaders, and hospital leadership seeking Magnet certification Incorporates recommendations of the Affordable Care Act's focus on accountable care organizations, the IOM's Future of Nursing Report, educational transformation, and current research on safety and quality of care

A National Trauma Care System-National Academies of Sciences, Engineering, and Medicine 2016-09-12 Advances in trauma care have accelerated over the past decade, spurred by the significant burden of injury from the wars in Afghanistan and Iraq. Between 2005 and 2013, the case fatality rate for United States service members injured in Afghanistan decreased by nearly 50 percent, despite an increase in the severity of injury among U.S. troops during the same period of time. But as the war in Afghanistan ends, knowledge and advances in trauma care developed by the Department of Defense (DoD) over the past decade from experiences in Afghanistan and Iraq may be lost. This would have implications for the quality of trauma care both within the DoD and in the civilian setting, where adoption of military advances in trauma care has become increasingly common and necessary to improve the response to multiple civilian casualty events. Intentional steps to codify and harvest the lessons learned within the military's trauma system are needed to ensure a ready military medical force for future combat and to prevent death from survivable injuries in both military and civilian systems. This will require partnership across military and civilian sectors and a sustained commitment from trauma system leaders at all levels to assure that the necessary knowledge and tools are not lost. A National Trauma Care System defines the components of a learning health system necessary to enable continued improvement in trauma care in both the civilian and the military sectors. This report provides recommendations to ensure that lessons learned over the past decade from the military's experiences in Afghanistan and Iraq are sustained and built upon for future combat operations and translated into the U.S. civilian system.

Primary Health Care: People, Practice, Place-Professor Gavin J Andrews 2012-11-28 Health care is

constantly undergoing change and refinement resulting from the adoption of new practices and technologies, the changing nature of societies and populations, and also shifts in the very places from which care is delivered. *Primary Health Care: People, Practice, Place* draws together significant contributions from established experts across a variety of disciplines to focus on such changes in primary health care, not only because it is the most basic and integral form of health service delivery, but also because it is an area to which geographers have made significant contributions and to which other scholars have engaged in 'thinking geographically' about its core concepts and issues. Including perspectives from both consumers and producers, it moves beyond geographical accounts of the context of health service provision through its explicit focus on the practice of primary health care. With arguments well-supported by empirical research, this book will appeal not only to scholars across a range of social and health sciences, but also to professionals involved in health services.

Uncertainty and Surprise in Complex Systems-Reuben R. McDaniel 2005-03-11 Complexity science has been a source of new insight in physical and social systems and has demonstrated that unpredictability and surprise are fundamental aspects of the world around us. This book is the outcome of a discussion meeting of leading scholars and critical thinkers with expertise in complex systems sciences and leaders from a variety of organizations, sponsored by the Prigogine Center at The University of Texas at Austin and the Plexus Institute, to explore strategies for understanding uncertainty and surprise. Besides contributions to the conference, it includes a key digest by the editors as well as a commentary by the late nobel laureate Ilya Prigogine, "Surprises in half of a century". The book is intended for researchers and scientists in complexity science, as well as for a broad interdisciplinary audience of both practitioners and scholars. It will well serve those interested in the research issues and in the application of complexity science to physical and social systems.

Third International Conference on System Science in Health Care-W. van Eimeren 2012-12-06 In the early stages of planning the Third International Conference in System Science in Health Care, the steering committee members, most of whom had participated in the first conference in Paris (1976) and the second in Montreal (1980), made some basic decisions about organization of subject matter. The earlier meetings had been very successful in bringing together specialists from the health professions and the traditional sciences. In addition to physicians and nurses, these were representatives of the disciplines of the behavioral sciences, system theory, economics, engineering, and the emergent fields of management science and informatics -all concerned with the development of health resources in a broad system context. The reported research and experience of the many disciplines represented had dealt with one or more of three concerns: 1) a major health problem, such as cardiovascular disease, or an important population at risk, such as the elderly or children or workers; 2) some generic aspect of organization and decision making, including trial and evaluation of innovative health strategies; and 3) the methodology of research and analysis in system of health service. The challenge to the conference organizers lay in the eliciting and arranging of experiences in such a way that the health services could be seen as purposeful, living, evolving systems.

Understanding Health Care Reform-MD, PhD, Arthur M. Feldman 2011-12-14 After nearly a year of debate, in March 2010, Congress passed and the president signed the Patient Protection and Affordable Care Act to reform the U.S. health care system. The most significant social legislation since the civil rights legislation and the creation of Medicare and Medicaid, the bill's passage has been met with great controversy. Pol

Advanced Practice Nursing E-Book-Ann B. Hamric 2008-07-02 Covering all advanced practice competencies and roles, this book offers strategies for enhancing patient care and legitimizing your role within today's health care system. It covers the history of advanced practice nursing, the theory behind the practice, and emerging issues. Offering a comprehensive exploration of advanced practice nursing, this edition also adds a focus on topics including the APN scope of practice, certification, and the ethical and legal issues that occur in clinical practice. The development of all major competencies of advanced practice nursing is discussed: direct clinical practice, consultation, coaching/guidance, research, leadership, collaboration, and ethical decision-making. Advanced practice competencies are discussed in relation to all advanced practice nursing and blended CNS-NP roles (case manager, acute care nurse practitioner), highlighting the shared aims and distinctions of each role. In-depth discussions on educational strategies explain how competencies develop as the nurses' practice progresses. A chapter on research competencies demonstrates how to use evidence-based research in practice, and how to promote these research competencies to other APNs. A conceptual framework shows the clear relationship between the competencies, roles, and challenges in today's health care environment. Practical strategies are provided for business management, contracting, and marketing. Comprehensive information covers the essential competencies of the new Doctor of Nursing Practice degree. More exemplars (case studies) provide real-life scenarios showing APN competencies in action. A new chapter shows how to provide reliable and valid data to substantiate your impact and justify equitable reimbursement for APN services, also enhancing your skills in quality improvement strategies, informatics, and systems thinking.

Information on telehealth considerations covers the new sources of electronic healthcare information available to patients and describes how to counsel them on using reliable resources.

Health and Inequality-Sarah Curtis 2004 By relating theoretical arguments to specific landscapes Sarah Curtis develops the basis for a geographical analysis of health problems and proposes a range of strategies for reducing disadvantage and societal inequalities.

Evaluation of Health Care Quality in Advanced Practice Nursing-Joanne V. Hickey, PhD, RN, FAAN, FCCM 2012-02-28 Named a 2013 Doody's Core Title! "This is a wonderful resource that fills a true gap in the literature. This is a topic that needs more exposure and more emphasis in the field of advanced practice nursing. The value of evaluation in healthcare quality will be seen in the outcomes of healthcare improvements." Score: 100, 5 Stars--Doody's Medical Reviews High-level evaluation skills reflecting national standards and benchmarks are becoming increasingly important in our changing health care climate. This is the only nursing textbook to lay the foundation for APNs to achieve the highest possible competency in conducting systematic and in-depth evaluations of all aspects of health care.

Comprehensive in scope, it distills current best practice information from numerous sources to create a thorough and reliable resource for APN and DNP graduates. The text addresses both the theoretical basis of evaluation and its application as an integral part of contemporary practice. It provides an overview of evaluation science and critically examines the characteristics, sources, and quality of the nature of evidence. Several frameworks are described to provide the reader with different evaluation models, including those of economic evaluation. The text covers in detail the evaluation of organizations, systems, and standards for practice, including information systems and patient care technology, the redesign of health care in accordance with patient-family centered models, and the challenges of the current trend toward electronic medical records. Also addressed is the evaluation of populations and health care teams, including characteristics, risk factors, and determinants, as well as the emphasis on interdisciplinary collaborative health teams. Additionally, the text covers translating outcomes from evaluation into health

care policy, and opportunities for advocacy and leadership among APNs. Key Features: Provides comprehensive coverage of evaluation of patient, population, systems, health team, and health care information systems technology outcomes Presents best practices and evidence-based practices that stress use in practice Uses case studies to illustrate application of evaluation in each practice area Stresses the importance of clear terminology in evaluation and provides definitions of relevant terms

Enhancing Data Systems to Improve the Quality of Cancer Care-National Research Council 2000-10-09 One of the barriers to improving the quality of cancer care in the United States is the inadequacy of data systems. Out-of-date or incomplete information about the performance of doctors, hospitals, health plans, and public agencies makes it hard to gauge the quality of care. Augmenting today's data systems could start to fill the gap. This report examines the strengths and weaknesses of current systems and makes recommendations for enhancing data systems to improve the quality of cancer care. The board's recommendations fall into three key areas: Enhance key elements of the data system infrastructure (i.e., quality-of-care measures, cancer registries and databases, data collection technologies, and analytic capacity). Expand support for analyses of quality of cancer care using existing data systems. Monitor the effectiveness of data systems to promote quality improvement within health systems.
