The Discovery of Isotopes-Michael Thoennessen 2016-06-02
This book describes the exciting discovery of every isotope observed on earth to date, which currently numbers some 3000. The discoveries are arranged in chapters according to the observation techniques or production methods. Each chapter contains tables listing the first authors of the first publication as well as details about the production and detection methods used. At the end, a comprehensive table lists all isotopes sorted by elements. The book is based on individual paragraphs for each isotope, which were published over the last few years as separate articles in the journal "Atomic Data and Nuclear Data Tables". The work re-evaluates all prior assignments judging them with a uniform set of criteria. In addition, the author includes over 100 new isotopes which have been discovered since the articles published. This book is a source of information for researchers as well as enthusiastic laymen alike. From the prepublication review: "The explanations focus on the essentials, which makes the various chapters pleasingly compact. The phrasing is well understandable also for non-experts. This makes the book easy to read, even thrilling. I have to confess that parts of the manuscript I was even reading as an evening lecture in the bed, so exciting was the history of isotope discoveries."
Sigurd Hofmann, Helmholtz Professor at GSI Darmstadt, Germany, and a leading expert in superheavy nuclei

Metal-Organic Framework Materials-Leonard R. MacGillivray 2014-09-19
Metal-Organic Frameworks (MOFs) are crystalline compoundsconsisting of rigid organic molecules held together and organizedby metal ions or clusters. Special interests in these materialsarise from the fact that many are highly porous and can be used forstorage of small molecules, for example H2 orCO2. Consequently, the materials are ideal candidatesfor a wide range of applications including gas storage, separationstechnologies and catalysis. Potential applications includethe storage of hydrogen for fuel-cell cars, and the removal andnstorage of carbon dioxide in sustainable technical processes. MOFsoffer the inorganic chemist and materials scientist a wide range ofnew synthetic possibilities and open the doors to new and excitingbasic research. Metal-Organic Frameworks Materials provides a solid basisor the understanding of MOFs and insights into new inorganicmaterials structures and properties. The volume also reflectsprogress that has been made in recent years, presenting a widerange of new applications including state-of-the art developmentsin the promising technology for alternative fuels. Thecomprehensive volume investigates structures, symmetry,supramolecular chemistry, surface engineering, recognition,properties, and reactions. The content from this book will be added online to theEncyclopedia of Inorganic and Bioinorganic Chemistry: ahref="http://www.wileyonlinelibrary.com/ref/eibc"http://www.wileyonlinelibrary.com/ref/eibca

Porsche-Laurence Meredith 2016-03-15
From the company's earliest days in the 1930s, the book gives a brief history of the glorious Auto-Union Grand Prix cars designed by Prof Porsche before detailing the miseries and triumphs of the company in the aftermath of war. Throughout the late 1940s and early 1950s Porsche struggled to survive, but unshakeable faith in the design of the 356 led to success in both circuit racing and rallying. The majority of rallying successes during the 1950s were largely achieved by privateers, without help from the factory. Ferry Porsche in particular considered it more important to build racing cars for circuit events, while wealthy enthusiasts clearly enjoyed proving the true versatility of these VW-derived cars by using them in international rallying. With the advent of the 911 in 1964, Porsche had produced a car with the potential to win sporting events at all levels, but it took until 1967 for this to be demonstrated. With its superior traction on slippery surfaces the 911 would go on to win the Monte Carlo Rally, and other significant international events, many times, while also taking class honours in the Targa Florio, Le Mans 24 Hours and other great classics. In the 1970s, when it seemed that more sophisticated rivals would bury the 911's rallying career forever, the car made several comebacks, even winning the Paris-Dakar Raid in the 1980s. The 911's sporting record speaks for itself, and demonstrates that the car designed by Butzi Porsche – work began on the project as early as 1959 – is the finest and most versatile of all sports cars. Meredith's book is written with affection, appreciation and authority – and criticism where it is due – and will make an invaluable addition to any rallying or Porsche enthusiast's library.

The Life of Saint Audrey- 2014-01-10
Preserved in a single manuscript in the British library, the Life of Saint Audrey or Vie Seinte Audree is the story of an Anglo-Saxon princess, who, though twice married, remains a virgin until her death. Her tale reveals that spiritual marriage was not an easy path to sainthood, particularly with an unwilling husband. The text is a fine example of what some critics have called a hagiographical romance—a saint's life that borrows many characteristics from secular romance. Recent scholarship, thoroughly discussed in this book's introduction, suggests that the Vie Seinte Audree is a fourth text by Marie de France, to whom the Fables, the Lais, and the Espurgatoire Seint Patriz have been attributed. Written in the late twelfth or early thirteenth century, the Vie Seinte Audree is published here for the first time in English, along with the Old French text. The editors of this new edition provide helpful material on the life of the historical Saint Etheldreda (as St. Audrey is called in Latin) and her Anglo-Saxon world. They also discuss women's writing in Anglo-Norman England as well as the subject of spiritual marriage. In addition, they examine secondary sources that have focused on the Vie Seinte Audree. A map of seventh-century England, a table of proper names and a geneological chart of the Royal Lineage of Saint Audrey are all included.

Parenting in Planned Lesbian Families-Henny Bos 2004
Annotation. This thesis reports on a study on lesbian families in which the children were born to the lesbian relationship (planned lesbian families). How strong is the desire of lesbian mothers to have a child, and what are their motivations? How do lesbian mothers experience parenthood? What do they strive for in child rearing? How do they experience the relationship with their partner, and do they feel supported by others? What is the quality of the parent-child relationship in lesbian families? Do lesbian mothers feel rejected, and if so, does this have a negative impact on their role as a parent, and does it negatively influence child adjustment? All these questions are examined in 'Parenting in Planned Lesbian Families', this by studying 100 two-mother families and compare them with 100 heterosexual families. It is the largest study on planned lesbian families to date. This title can be previewed in Google Books - http://books.google.com/books?vid=ISBN9789056293673.
