Telling, Writing and Reading Number Tales in ASL and English Academic Languages-Alexander Zernovoj 2005 One of the major goals in deaf education is to teach deaf and hard of hearing students the tools and strategies to solve mathematical word problems. A mathematical word problem curriculum was designed and implemented based on telling, reading and writing number tales in American Sign Language (ASL) and English. The learning experiences helped develop ASL and English academic language in deaf students across two domains: Literacy and Mathematics. The results suggested that the deaf students (1) acquired and maintained word problem solving strategies and tools that are critical for reading and solving math word problems, (2) used prior knowledge and daily experiences to connect with number tales, (3) increased their metalinguistic awareness of ASL and English, (4) developed mathematical academic language (or "math talk") in both ASL and English, and (5) gained confidence in their ability to read and solve mathematical word problems. The following are appended: (1) Curriculum Lesson Plans; (2) Curriculum Forms; and (3) Curriculum Rubrics. (Contains 34 figures and 28 tables.) [M.A. Thesis, University of California.].

The Core: Teaching Your Child the Foundations of Classical Education-Leigh A. Bortins 2010-06-08 In the past, correct spelling, the multiplication tables, the names of the state capitals and the American presidents were basics that all children were taught in school. Today, many children graduate without this essential knowledge. Most curricula today follow a haphazard sampling of topics with a focus on political correctness instead of teaching students how to study. Leigh Bortins, a leading figure in the homeschooling community, is having none of it. She believes that there are core areas of knowledge that are essential to master. Without knowing the multiplication tables, children can't advance to algebra. Without mastery of grammar, students will have difficulty expressing themselves. Without these essential building blocks of knowledge, students may remember information but they will never possess a broad and deep understanding of how the world works. In *The Core*, Bortins gives parents the tools and methodology to implement a rigorous, thorough, and broad curriculum based on the classical model, including: - Rote memorization to cement knowledge - Systematic learning of geography, historical facts, and timelines - Reading the great books and seminal historical documents instead of adaptations and abridged editions - Rigorous training in math and the natural sciences

Results and Interpretations of the 2003 Mathematics Assessment of the National Assessment of Educational Progress-Peter Kloosterman 2007 With the enactment of No Child Left Behind, and its sanctions for schools that fail to make adequate yearly progress, NAEP (National Assessment of Educational Progress) results are no longer afterthoughts. Instead, the results generate headlines and are at the forefront of discussion of what is working in schools and what needs to be changed. As the scrutiny of NAEP results has increased, the National Center for Education Statistics has provided more detailed reporting of the results and has increased the level of security of the assessment items. Both the level of detail and the concern for item security have played prominent roles in the development of this book. The foregoing changes make understanding NAEP and its consequences crucial for any educator. This book provides a background on NAEP, looks at 2003 mathematics achievement in different content areas, discusses data on who is teaching mathematics in the United States and examines students' perception of mathematics. Additionally, the book deals with results from NAEP broken down by race/ethnicity and by gender, analyses certain NAEP results with a focus on what is actually measured by those results and examines changes in NAEP over the years and what those changes mean for NAEP as a tool for understanding student learning.
