A Game of Birds and Wolves-Simon Parkin 2020-01-28 The triumphant true story of the young women who helped to devise the winning strategy that defeated Nazi U-boats and delivered a decisive victory in the Battle of the Atlantic. By 1941, Winston Churchill had come to believe that the outcome of World War II rested on the battle for the Atlantic. A grand strategy game was devised by Captain Gilbert Roberts and a group of ten Wrens (members of the Women's Royal Naval Service) assigned to his team in an attempt to reveal the tactics behind the vicious success of the German U-boats. Played on a linoleum floor divided into painted squares, it required model ships to be moved across a make-believe ocean in a manner reminiscent of the childhood game, Battleship. Through play, the designers developed "Operation Raspberry," a countermeasure that helped turn the tide of World War II. Combining vibrant novelistic storytelling with extensive research, interviews, and previously unpublished accounts, Simon Parkin describes for the first time the role that women played in developing the Allied strategy that, in the words of one admiral, "contributed in no small measure to the final defeat of Germany." Rich with unforgettable cinematic detail and larger-than-life characters, A Game of Birds and Wolves is a heart-wrenching tale of ingenuity, dedication, perseverance, and love, bringing to life the imagination and sacrifice required to defeat the Nazis at sea.

Principles of Hydraulic System Design-Peter Chapple 2002-12-31 The book is structured so as to give an understanding of: . The basic types of components and their operational principles. . The way in which circuits can be arranged using available components to provide a range of functional outputs. . The analytical methods that are used in system design and performance prediction. Fluid power systems are manufactured by many organisations for a very wide range of applications, which often embody differing arrangements of components to fulfil a given task. Hydraulic components are manufactured to provide the control functions required for the operation of systems, each manufacturer using different approaches in the design of components of any given type. As a consequence, the resulting proliferation of both components and systems can, to the uninitiated, be an obstacle to the understanding of their principle of operation. Components are arranged to provide various generic circuits, which can be used in the design of systems so as to suit the functional characteristics of the particular application.

Fire Service Hydraulics and Pump Operations-Paul Spurgeon 2012-01 Author Paul Spurgeon, engineer/pump operator with the Denver Fire Department, breaks down into easily learned steps the sometimes difficult-to-understand formulas of hydraulics and pumps, taking care to explain the hows and whys of each formula discussed. Using an in-the-street, practical approach, Spurgeon teaches readers how

to develop proper fire streams as well as how they relate to overall fireground strategies. He covers hydraulics and pumps extensively--from the properties of water to its supply to pumping to sprinkler systems and foams. So readers can put what they've learned into practice, Spurgeon provides both end-of-chapter tests and practice sets at the end of the book, complete with answers so that readers can check their knowledge. This text meets the learning objectives for FESHE Fire Protection Hydraulics and Water Supply course work.

The European Union and Human Security-Mary Martin 2009-12-16 This edited book examines European external interventions in human security, in order to illustrate the evolution and nature of the European Union as a global political actor. In 2003, the EU deployed its first external mission under the European Security and Defence Policy (ESDP) with a military force to the former Yugoslav Republic of Macedonia. Since then it has instigated over 18 civilian and military missions to deal with humanitarian crises all over the world. This book presents a series of eight case studies of external interventions by the EU covering the Balkans, Africa, the Middle East, Afghanistan and Indonesia, to illustrate the nature of the EU as a global actor. Using the concept of human security to assess the effectiveness of these missions in meeting the EU's aim of being a 'force for good in the world', this study addresses two key issues: the need for an empirical assessment of EU foreign and security policies based on EU intervention in conflict and post-conflict situations and the idea of 'human security' and how this is applied in European foreign policy. This book will be of great interest to students of European Security, EU politics, human security, post-conflict reconstruction, and IR in general. Mary Kaldor is Co-Director of the Centre for the Study of Global Governance, London School of Economics and Political Science (LSE). Prior to this she worked at Sussex University as Jean Monnet Reader in Contemporary European Studies. Mary Martin is a Research Fellow at the Centre for the Study of Global Governance, the London School of Economics. From 2006-2009 she was co-ordinator of the Human Security Study Group. She was formerly a foreign correspondent and European editor for The Daily Telegraph and Guardian newspapers.
